Duality for Markov Processes

A Lie Algebraic Approach

 Springer

Contents

1	Introduction	1
2	Basics of the Algebraic Approach	13
2.1	Two Starting Examples	13
2.1.1	Reflected and Absorbed Brownian Motion	13
2.1.2	Wright-Fisher Diffusion and Kingman's Coalescent	15
2.2	Semigroup Duality and Generator Duality	17
2.3	Dualities, Symmetries and Intertwinings for Finite Markov Chains	22
2.3.1	Self-duality and Symmetry	23
2.3.2	Duality and Symmetry	27
2.3.3	Duality and Intertwining	30
2.4	Duality and Intertwining of Bounded Operators	32
2.4.1	Duality and Intertwining of Matrices.....	33
2.4.2	Duality and Intertwining in the L^2 -space Setting.....	37
2.4.3	Duality and Intertwining: General Hilbert Space Case.....	39
2.4.4	Intertwined Representations in Hilbert Spaces	42
2.5	Duality as a Change of Representation	43
2.5.1	Two Representations of the Heisenberg Algebra	44
2.5.2	The Duality Wright-Fisher/Kingman Revisited	45
2.5.3	Heisenberg Algebra: Further Examples of Intertwined Representations	46
2.5.4	Examples	47
2.6	Duality and Intertwining of Algebras	48
2.6.1	Intertwining and Duality: General Case.....	51
2.7	Additional Notes	53
3	Self-duality for Independent Random Walkers	57
3.1	The Process on a Finite Set.....	57
3.2	Symmetries of the Generator	59
3.3	Self-duality	64

3.4	Self-duality as a Change of Representation.....	68
3.5	Infinite Configurations	71
3.6	The Set of Ergodic Tempered Measures in \mathbb{Z}^d	75
3.6.1	Invariant Measures Ergodic Under Translations	81
3.7	Additional Notes	83
4	Duality for Independent Random Walkers	85
4.1	Many Particle Limit and New Dualities	85
4.2	Duality as a Change of Representation	88
4.3	Generating Functions	90
4.3.1	Connecting Dualities and Discovering New Ones.....	90
4.3.2	From Reversible Measures to Self-duality Functions ...	95
4.3.3	Classification of Product Self-duality Functions	97
4.4	Intertwining	99
4.5	More General Independent Processes.....	103
4.6	Ergodic Measures in \mathbb{Z}^d	107
4.7	Non-symmetric Case.....	111
4.8	Joint Moment Generating Function of Currents	113
4.9	Additional Notes	119
5	Duality for the Symmetric Inclusion Process	121
5.1	Introduction	121
5.2	The Finite Symmetric Inclusion Process.....	123
5.3	Symmetries of the Generator	123
5.4	Self-duality	127
5.5	Self-duality as a Change of Representation.....	131
5.6	The Abstract Generator Revisited.....	135
5.7	Ergodic Tempered Measures	139
5.8	Propagation of Positive Correlations.....	143
5.9	Inhomogeneous Symmetric Inclusion Process	148
5.10	Additive Structure on Ladder Graphs	150
5.11	Additional Notes	152
6	Duality for the Brownian Energy Process	155
6.1	The Brownian Energy Process on Two Vertices.....	155
6.2	Duality on Two Vertices	157
6.3	Abstract Form of the Generator	157
6.4	Duality of Inhomogeneous BEP(α) and SIP(α)	159
6.5	Generating Functions	162
6.6	Intertwining	167
6.6.1	Intertwining Between BEP(α) and SIP(α)	168
6.6.2	Intertwining Between SIP(α) and BEP(α)	172
6.7	The Brownian Momentum Process	175
6.8	Additional Notes	180

7	Duality for the Symmetric Partial Exclusion Process	181
7.1	Introduction	181
7.2	Process Definition and Connection with $su(2)$	183
7.3	The Abstract Generator	186
7.4	Additive Structure	187
7.5	Intertwining Between Different α 's	188
7.6	Scaling Limits	190
7.7	Additional Notes	193
8	Duality for Other Models	197
8.1	Introduction	197
8.2	Thermalization: Definition and a First Example	198
8.3	Continuous and Discrete KMP Models	202
8.3.1	Some Background on the KMP Model	202
8.3.2	Thermalization of Symmetric Inclusion Process and of Brownian Energy Process	203
8.3.3	Generalized Discrete and Continuous KMP Processes	206
8.4	The Kac Model	209
8.5	The Ginzburg-Landau Model	211
8.6	The Wright-Fisher Diffusion and the Moran Model	216
8.6.1	Coalescent: Duality with a Pure Death Process	217
8.6.2	Conservative Duals: Birth and Death Processes	219
8.6.3	Dualities for Finite Size Populations	220
8.7	Additional Notes	221
9	Orthogonal Dualities	223
9.1	Introduction	223
9.1.1	Usefulness of Orthogonal Dualities	224
9.1.2	Orthogonal Polynomials and Gram-Schmidt Orthogonalization	225
9.1.3	A Remark on the Norm of the Orthogonal Duality Function	226
9.1.4	Chapter Organization	227
9.2	Orthogonal Self-duality for Independent Random Walkers	227
9.3	Orthogonal Duality and Relaxation to Equilibrium	231
9.3.1	Variance, Covariance and Orthogonal Polynomials	231
9.3.2	Application to Independent Random Walkers	232
9.4	Overview of Orthogonal Dualities	236
9.4.1	Preliminaries: Hypergeometric Polynomials	236
9.4.2	Orthogonal Self-duality of Discrete Processes	240
9.4.3	Orthogonal Duality Between Continuous and Discrete Processes	241
9.4.4	Self-duality of Continuous Processes	242
9.5	Structural Relations of Hypergeometric Functions	243
9.5.1	Proof of Theorem 9.5	244

9.5.2	Proof of Theorem 9.7	248
9.5.3	Proof of Theorem 9.10	250
9.6	Orthogonal Duality as a Change of Representation of the Lie Algebra.....	251
9.7	Orthogonal Duality and Unitary Intertwining	257
9.8	Gram-Schmidt Orthogonalization.....	262
9.9	Additional Notes	265
10	Consistency	267
10.1	Introduction	267
10.2	Definition of Consistency.....	269
10.2.1	Strong Consistency.....	271
10.3	Recurrence Relations for Factorial Moments.....	273
10.3.1	Example: Expected Number of Particles	273
10.3.2	General Case: Weighted Factorial Moments.....	274
10.3.3	Consistency and Self-duality	277
10.4	Probabilistic Interpretation of Consistency	278
10.4.1	Compatibility Between Labeled and Unlabeled Particle Systems	279
10.4.2	Consistency for Coordinate Processes	282
10.4.3	Combinatorial Interpretation of Consistency	286
10.5	The Reference Process.....	288
10.5.1	Consistency of the Reference Process.....	289
10.5.2	Reversibility of the Reference Process	289
10.5.3	Self-duality of the Reference Process	290
10.5.4	Coordinate Reference Processes.....	290
10.6	Consistency for Systems with Absorbing Sites.....	292
10.6.1	Factorial Moments in Absorbing Systems	294
10.6.2	Two Absorbing Sites	295
10.7	A Consistent Non-reversible Particle System	296
10.8	Additional Notes	298
11	Duality for Non-equilibrium Systems	299
11.1	Introduction	300
11.1.1	Non-equilibrium and Duality	300
11.1.2	General Structure of the Models.....	301
11.2	Independent Random Walkers with Reservoirs	302
11.3	Interacting Particle Systems with Reservoirs	308
11.3.1	Set-up: The Reference Process with Reservoirs	308
11.3.2	Triangular Duality	314
11.3.3	Non-equilibrium Steady State	319
11.3.4	Orthogonal Duality	328
11.3.5	Systems with Two Reservoirs	333
11.4	Brownian Energy Process with Reservoirs	347
11.4.1	Continuous-discrete Duality	349

	11.4.2	Continuous-continuous Duality	354
11.5		Additional Notes	355
12		Duality and Macroscopic Fields	357
12.1		Introduction	357
12.2		The Case of Independent Random Walkers	359
	12.2.1	Preliminaries	359
	12.2.2	Expected Density Field: From a Single Dual Particle to the Heat Equation	363
	12.2.3	Variance of the Density Field: Two Dual Particles	365
	12.2.4	Scaling Limits of the Variance of the Density Field	367
	12.2.5	Connection with the SPDE for the Limiting Density Fluctuation Field	371
	12.2.6	Summary	372
	12.2.7	Local Equilibrium: n Dual Particles	373
	12.2.8	Stationary Fluctuation Field	377
12.3		The Interacting Case	380
	12.3.1	Time Dependent Covariance of Particle Numbers: Two Dual Particles	381
	12.3.2	Variance of the Density Fluctuation Field	386
	12.3.3	Propagation of Local Equilibrium	393
12.4		Higher Order Hydrodynamic Fields	397
	12.4.1	Hydrodynamic Equation for the n -th Order Field	399
12.5		Boltzmann Gibbs Principle and Orthogonal Polynomial Duality	402
12.6		Additional Notes	406
13		Duality and Integrable Models	409
13.1		Introduction	409
13.2		The Symmetric Harmonic Process	410
13.3		Integrable Spin Chains	414
	13.3.1	The Integrable Heisenberg XXX_s Hamiltonian with Compact Spins	416
	13.3.2	The Heisenberg XXX_s Hamiltonian with Non-compact Spins	419
13.4		The Symmetric Harmonic Process as the Limit of Asymmetric Models	420
13.5		Algebraic Description of the Harmonic Process	422
13.6		Reversible Measure and Self-duality of the Harmonic Process ...	425
13.7		Integrable Heat Conduction Model	429
13.8		Duality of the Integrable Heat Conduction Model	432
13.9		The Hidden Parameter Model and Propagation of Mixtures	436
13.10		Boundary-driven Harmonic Chain	440
13.11		Spatial Markovian Structure of the Hidden Parameter Process ...	449
13.12		Additional Notes	452

A	Markov Processes	455
A.1	Discrete-time Markov Chains	455
A.1.1	Path Space	455
A.1.2	Transition Matrix, Markov Property	456
A.1.3	Transition Operator, Invariant Measures	458
A.2	Continuous-time Jump Processes	464
A.2.1	Path Space	464
A.2.2	Markov Processes, Transition Rates	464
A.2.3	Semigroups, Generators and Invariant Measures	466
A.2.4	Examples	472
A.3	Generators and Semigroups: General Case	475
A.3.1	Hille Yosida Theory of Markov Semigroups	476
A.3.2	Brownian Motion and Diffusion Processes	486
A.4	Coupling	491
B	Lie Algebras and Lie Groups	495
B.1	Groups	495
B.2	Lie Groups	499
B.3	Lie Algebras	501
B.4	Lie Algebra of a Matrix Lie Group	502
B.5	Representations	505
B.6	The Dual Representation	507
B.7	Universal Enveloping Algebra of a Lie Algebra	508
C	Overview of Dualities	511
C.1	General Structure of the Models	511
C.1.1	Hypergeometric Functions and Orthogonal Polynomials	513
C.2	Processes Associated with the Heisenberg Algebra	514
C.2.1	Table of Duality Functions	514
C.2.2	Basic Processes	514
C.2.3	Examples and Remarks	515
C.2.4	Thermalized Processes	516
C.2.5	Additional Processes	516
C.3	Processes Associated with the $\mathfrak{su}(1, 1)$ Algebra	518
C.3.1	Table of Duality Functions	518
C.3.2	Basic Processes	518
C.3.3	Examples and Remarks	519
C.3.4	Thermalized Processes	520
C.3.5	Harmonic Processes	521
C.3.6	Additional Processes	522

C.4	Processes Associated with the $\mathfrak{su}(2)$ Algebra	524
C.4.1	The Processes and Their Dualities	524
C.4.2	Remarks	525
C.5	Algebra Dualities	526
C.5.1	Equivalent Representations of the Heisenberg Algebra	526
C.5.2	Equivalent Representations of the $\mathfrak{su}(1, 1)$ Algebra	530
C.5.3	Equivalent Representations of the $\mathfrak{su}(2)$ Algebra.....	535
