

NELSON & WILLIAMS' INFECTIOUS DISEASE EPIDEMIOLOGY

Theory and Practice

FOURTH EDITION

Carolyn Masters Williams, PhD, MPH

Chief, Epidemiology Branch, Basic Science Program (retired)

Division of AIDS

National Institute of Allergy and Infectious Diseases

National Institutes of Health

Bethesda, Maryland

Emily S. Gurley, PhD, MPH

Distinguished Professor of the Practice

Department of Epidemiology

Johns Hopkins Bloomberg School of Public Health

The Johns Hopkins University

Baltimore, Maryland

Brief Contents

Preface	xvi
Learning and Teaching Resources	xix
Contributors	xx

PART I	Methods in Infectious Disease Epidemiology	1
CHAPTER 1	A Brief History of the Origins of Infectious Disease Epidemiology	3
CHAPTER 2	Epidemiology of Infectious Disease: General Principles	17
CHAPTER 3	Data Visualizations in Infectious Disease Epidemiology	51
CHAPTER 4	Infectious Disease Dynamics	79
CHAPTER 5	Prevention of Infectious Diseases	117
CHAPTER 6	Outbreak Epidemiology	141
CHAPTER 7	One Health	163
CHAPTER 8	Microbiology Tools for the Epidemiologist	177
CHAPTER 9	Molecular Epidemiology	213
CHAPTER 10	The Immune System and Host Defense Against Infections	233
CHAPTER 11	Vaccines: Past, Present, and Future	261
CHAPTER 12	Emerging Infections and Pandemic Preparedness	293
CHAPTER 13	Nutrition and Infectious Disease	319

CHAPTER 14	Healthcare-Associated Infections	331
CHAPTER 15	Antimicrobial Resistance	351
PART II	Airborne Transmission	373
CHAPTER 16	Influenza	375
CHAPTER 17	Measles	393
CHAPTER 18	Tuberculosis	417
CHAPTER 19	Acute Respiratory Infections	447
PART III	Hygiene and Infectious Disease Transmission	483
CHAPTER 20	Pathogens Transmitted Through Inadequate Access to Drinking Water, Sanitation, and Hygiene	485
PART IV	Blood and Body Fluid as a Reservoir of Infectious Diseases	521
CHAPTER 21	Human Immunodeficiency Virus	523
CHAPTER 22	Viral Hepatitis	583
CHAPTER 23	Sexually Transmitted Diseases	621
PART V	Vector-Borne Diseases	663
CHAPTER 24	Aedes-Borne Infections	665
CHAPTER 25	Rickettsial Diseases	683
CHAPTER 26	Tick-Borne Infections in the United States	697
CHAPTER 27	Malaria	717
	Glossary	741
	Index	751

Contents

Preface	xvi
Learning and Teaching Resources.....	xix
Contributors	xx

PART I Methods in Infectious Disease Epidemiology 1

CHAPTER 1 A Brief History of the Origins of Infectious Disease Epidemiology 3

William J. Moss

Introduction	3
Contagion	4
Pathogenic Microorganisms	5
Why Did It Take So Long from the Observation of Microorganisms to Understanding Them as Causes of Disease?	7
Pathogenic Microorganisms: <i>Contagium Animatum</i>	10
The Infectious Diseases Challenge	14
Further Reading	15
References	15

CHAPTER 2 Epidemiology of Infectious Disease: General Principles 17

Carolyn Masters Williams and Elizabeth F. Topper

Introduction	17
The Classification of Infectious Diseases	19
Epidemiologic Characteristics of Infectious Diseases	21
Incubation Period	21
Biologic Characteristics of the Organism	23
Transfusion-Transmitted Infection	25
The Host–Parasite Relationship	26
Temporal Trends of Infectious Diseases	26
Herd Immunity	29

Epidemiologic Studies of Infectious Diseases	29
Sampling	29
Measurement and Measures of Disease Occurrence	29
Measurement and Time	30
Analysis	31
Measurement in Populations: Incidence and Prevalence	31
Population Comparisons and Epidemiologic Inference	32
Measures of Association	32
Causation and Epidemiologic Inference	33
Types of Epidemiologic Study Design	34
Descriptive Studies	34
Ecologic Studies	35
Analytic Studies	37
Cross-Sectional Studies	37
Systematic Reviews and Meta-Analyses	48
Lessons from COVID-19	48
References	49

CHAPTER 3 Data Visualizations in Infectious Disease Epidemiology ... 51

Kyu Han Lee, Kyle T. Aune, and Shirlee Wohl

Introduction	51
Four Guiding Principles of Data Visualization	51
Best Practices in Data Visualizations	53
Descriptive Epidemiology	54
Exploring Data through Univariate Distributions	54
Examining Epidemiologic Relationships	56
Applying Data Visualizations to Outbreak Investigations	56
Software and Resources	58
Spatial Analysis	58
Point Pattern Data	62
Geodata: Points	63
Geodata: Interpolation	64
Area-Level Data	66
Software and Resources	68

Genomics	68	Infectious Disease Dynamics and Public Health	105
Plotting Mutations across a Genome	69	World Health Organization and Malaria Eradication	105
Evolutionary Relationships between Sequences	71	Rubella Vaccination	105
Software and Resources	77	Influenza Pandemic Preparedness and Response	107
Conclusion	77	Estimating Trends in HIV Infection using Backcalculation	107
References	78	HIV and Core Groups	108
CHAPTER 4 Infectious Disease Dynamics 79		Foot-and-Mouth Disease	108
<i>Derek A.T. Cummings and Justin Lessler</i>		HPV Vaccination	109
Introduction	79	Response to the SARS-CoV-2 Pandemic	110
A Brief History	79	Future Trends	111
Determinants of Epidemic Growth	82	References	112
The Reproductive Number	82	CHAPTER 5 Prevention of Infectious Diseases 117	
Herd Immunity	83	<i>Catherine G. Sutcliffe, Wendy W. Davis, and David D. Celentano</i>	
Heterogeneity in Transmission	84	Introduction	117
Generation Time	84	Individual Prevention Measures	117
Elements of the Course of Infection	85	Handwashing	117
Incubation Period	85	Food Safety	120
Latent Period	85	Male Condoms	123
Infectious Period	86	Personal Prevention Measures against Vector-Borne Diseases	125
Dynamic Models of the Epidemic Process	86	Community Prevention Measures	128
Compartmental Models	86	Sanitation and Water Safety	128
Force of Infection	88	Isolation, Quarantine, Case Finding, and Contact Tracing	129
Transmission Rates: Density and Frequency Dependent Transmission	88	Screening of the Blood Supply	132
Host Population Structure	89	Community Prevention Measures against Vector-Borne Diseases	134
Homogeneous Mixing	89	Conclusions	137
Introducing Structure	89	References	137
Types of Pathogens	92	CHAPTER 6 Outbreak Epidemiology 141	
Immune Status and Pathogen Population Structure	92	<i>David Blythe and Monique Duwell</i>	
Mode of Transmission	93	Introduction	141
Spatial Spread	96	Surveillance and Outbreak Detection	142
Dynamic Populations and Pathogens	97	Outbreak Investigation	144
Open Populations	97	Prepare and Plan for the Investigation	144
Seasonality	97	Confirm the Existence of an Outbreak—Verify the Diagnosis	145
Multiannual Cycles	99	Identify and Count Cases and Exposed Persons—Select a Case Definition	145
Changing and Diverse Pathogens	99		
Stochasticity and Randomness	100		
Other Methods of Including Stochasticity	101		
Methods of Estimation	102		
Time Periods	102		
Methods of Inference	102		
Basic Reproductive Number	103		
Equilibrium Prevalence and Use of Average Age	104		
Next-Generation Matrix	104		

Identify Cases, Population at Risk, and Controls	146
Choose an Investigation Study Design	147
Collect Risk Information	149
Tabulate and Orient the Data in Terms of Time, Place, and Person	151
Perform Laboratory Analysis	152
Conduct an Environmental Investigation	152
Implement Control Measures	154
Formulate and Test Hypotheses	156
Plan Additional Studies	160
Communicate Findings	160
Conclusion	160
References	161

CHAPTER 7 One Health..... 163

*Meghan F. Davis, Gabriel K. Innes,
and Emily S. Gurley*

Introduction	163
Overview	163
Historical Perspective	163
Modern Definition of One Health	164
One Health Domains and Their Relationships	164
Data Analysis	165
Environmental Infectious Diseases	168
Guidance Documents	169
Role of One Health in Specific Diseases	169
Emerging Respiratory Viruses	170
Food-Borne Pathogens	173
Role of One Health in Surveillance Efforts for Emerging Zoonotic Disease Agents	174
Health Security	174
Zoonotic Disease Prioritization Tool	175
Conclusion	175
References	175

CHAPTER 8 Microbiology Tools for the Epidemiologist..... 177

Nikki Parrish and Stefan Riedel

Introduction	177
Taxonomy, Classification, and Structure of Infectious Agents	178
Viruses	179
Structure	180
Bacteria	182
Classification	182
Structure	187

Fungi	190
Classification	190
Structure	194
Medical Parasitology	195
Protozoa	195
Classification	196
Helminths	199
Aschelminthes	199
Diagnostic Microbiology	201
Microscopy	201
Suggested Reading	211

CHAPTER 9 Molecular Epidemiology..... 213

*Michael A. Martin, Isabel Rodriguez-Barraquer,
and M. Kate Grabowski*

Introduction	213
Molecular Epidemiological Measurements:	
Key Considerations	214
Specimen Type	214
Timing of Specimen Collection	214
Measuring Assay Validity	215
An Introduction to Seroepidemiology	218
Measuring Long-Lived Antibody Responses in Populations to Quantify Transmission	218
Measuring Antibody Responses in Populations to Quantify Immunity	218
Beyond Quantifying Exposure/Immunity	219
Laboratory Assays for Seroepidemiology	219
Uses of Seroepidemiology Vary Across Pathogen Groups	219
An Introduction to Pathogen Genomics	220
Importance and Sources of Pathogen Diversity	220
Bacterial Strain Typing	221
Generation of Pathogen Sequence Data	221
Sequence Data Analysis	223
Phylogenetics	223
Phylodynamics	224
Public Sequence Repositories	227
Challenges and Future Directions in Molecular Epidemiology	227
Sampling Biases and Purposeful Study Design ..	228
Data Quality Issues	228
Big Data Challenges	228
Data Integration	228
Ethical Considerations	228
Conclusion	229
References	229

CHAPTER 10 The Immune System and Host Defense Against Infections233

Joseph B. Margolick and Alan L. Scott

Introduction	233
Recognition of Pathogens by the Innate Immune Response	235
Recognition of Pathogens by the Adaptive Immune Response	238
Antigen Recognition in Adaptive Immunity.....	238
Structure of the B Cell Receptor (BCR)	239
Structure of the T Cell Receptor (TCR)	240
BCR and TCR Specificity and Diversity	242
Rules for BCR and TCR Recognition of Antigens.....	242
After Antigen Binding: Immune Activation	244
Co-inhibitory Molecules	245
Dealing with the Pathogen: Immune Effector Mechanisms	245
Antibodies (Immunoglobulins)	246
T Cell–Mediated Immunity—Functional Subsets of CD4 Helper T Cells	247
T Cell–Mediated Immunity—CD8 Cytotoxic T Cells	249
Cytokines of the Innate and Adaptive Immune Systems	249
Cytokines of the Innate Response	250
Cytokines of the Adaptive Response	253
Immunity at Barrier Surfaces.....	254
Tolerance and the Regulation of the Immune Response	256
Selective Immune Deficiencies: Windows into the Functional Mechanisms of the Immune System	256
B Cell Immune Deficiency.....	256
T Cell Immune Deficiency.....	257
NK Cell Immune Deficiency	257
Other Immune-Mediated Diseases Related to Infectious Organisms	258
Immune Mechanisms and Infectious Organisms	258
Conclusion	259
Recommended Immunology Textbooks.....	259
References	259

CHAPTER 11 Vaccines: Past, Present, and Future 261

Anita M. Loughlin

Introduction	261
Active versus Passive Immunization	261
Types of Vaccines.....	264
Live Attenuated Vaccines.....	264
Inactivated Vaccines	267
Recombinant Vaccines.....	268
Nucleic Acid Vaccines	269
Novel Vaccines	270
Immunization Schedules.....	271
Target Populations.....	271
Conditions That Contraindicate Vaccination ...	273
Vaccine Development.....	273
Preclinical Studies.....	273
Phase I: Dose Finding and Safety.....	274
Phase II: Safety and Immunogenicity Trials	274
Phase III: Comparative Efficacy Trials	275
Vaccine Efficacy and Vaccine Effectiveness.....	275
Epidemiologic Studies.....	277
Seroprevalence Cross-Sectional Studies.....	278
Prospective Studies.....	278
Case-Control Studies.....	279
Monitoring Adverse Events and Vaccine Safety.....	279
Direct Impact of Vaccination	281
Polio	281
Measles	283
<i>Haemophilus Influenzae</i> Type B	284
The Role of Vaccines in Eradication of Specific Diseases	285
Toward Global Eradication of Polio	286
Potential for Eradication of Other Communicable Diseases.....	288
Barriers to Vaccine Implementation and Coverage	289
References	290

CHAPTER 12 Emerging Infections and Pandemic Preparedness293

Jennifer B. Nuzzo, Tara Kirk Sell, Amesh Adalja, and Carolyn Masters Williams

The Genesis of Pandemics	293
--------------------------------	-----

Factors in the Emergence of Infectious Diseases	296
Factors That Increase the Risk of Spillovers from Wildlife	296
Changing Climate and Risk of Infection.....	297
Intentional Release of Pathogens and Synthetic Biology	299
Factors That Increase the Risk of Onward Transmission of Newly Emerged Pathogens	300
Changes in the Susceptible Population	301
Preparedness for and Mitigating Risk of Future Pandemics.....	302
Improving Surveillance to Detect and Respond to Pandemic Threats	303
Improving Strategies for the Appropriate Use of Nonpharmaceutical Interventions to Slow Transmission	306
Personal NPIs	306
Community NPIs	307
Implementation Considerations	308
Improving Risk Communication	309
Risk Perception, Outrage, and Amplification	309
Public Health Risk Communication Guidance	310
Addressing Misinformation and Disinformation	310
Improving Healthcare Preparedness	311
Special Programs and Considerations for Hospital Preparedness	312
Facets of Pandemic Preparedness in Healthcare Facilities.....	312
Expanding Physical Space	312
Optimizing Staffing	312
Personal Protective Equipment (PPE) Sufficiency	313
Intensive Care Unit (ICU) and Emergency Department Preparedness	313
Crisis Standards of Care.....	313
Participating in Clinical Trials	314
Preparing for Vaccines and Other Medical Countermeasures.....	314
Addressing Inequities	315
Conclusion	315
References	315

CHAPTER 13 Nutrition and Infectious Disease 319

Pranay Sinha, Natasha S. Hochberg, and Alice Tang

Introduction	319
Assessing Nutritional Status	320
Studying Interaction Between Nutritional Status and Infection	320
Impact of Nutritional Status on Infection.....	320
Impacts on Disease Acquisition	320
Impacts on Disease Trajectory	324
Impact of Infection on Nutritional Status.....	324
Case Report: Tuberculosis	326
Conclusion	328
Recommended Readings.....	329

CHAPTER 14 Healthcare-Associated Infections..... 331

Lisa L. Maragakis

Introduction	331
Types of Healthcare-Associated Infections ..	331
Burden and Impact of HAIs.....	332
Multidrug-Resistant Organisms of Concern ..	333
Methicillin-Resistant <i>Staphylococcus aureus</i> ..	333
Vancomycin-Resistant Enterococci (VRE) ..	334
Clostridioides difficile Infection (CDI).....	334
Multidrug-Resistant Gram-Negative Organisms	335
Other Pathogens of Concern	337
Pathogenesis and the Chain of Infection	
Transmission.....	337
HAI Epidemiology and Surveillance	339
Measures of HAI Frequency.....	339
Methods to Evaluate Risk Factors for Healthcare-Associated Infections and the Impact of Interventions	341
Methods of Surveillance	341
The Role of the Microbiology Lab in Infection Prevention	342
The Importance of Hand Hygiene.....	343
Standard and Transmission-Based Precautions.....	344
Current Guidance and Evidence-Based Prevention Strategies.....	344
CLABSI Prevention	345

CAUTI Prevention	345
VAE/VAP Prevention	346
SSI Prevention	346
Infection Prevention Program Structure and Activities	346
Conclusions	347
References	348

CHAPTER 15 Antimicrobial Resistance 351

*Ashley Rene Styczynski, Amber Marie Vasquez,
and Benjamin J. Park*

What Is AMR?	351
Why Is AMR a Global Problem?	351
How Does AR Arise?	353
Overview of Bacteria and Antibiotics	353
Evolution/Historical Perspective	353
Emergence of AR	353
Mechanisms of Resistance	355
Impaired Permeability and Efflux Pumps	356
Bacterial Community Adaptations	356
Antibiotic Inactivation	356
Modifications in Target Sites	356
Vertical Versus Horizontal Transmission	356
What Are the Priority Diseases or Pathogens to Know About?	357
How Do You Identify Where AR Is Spreading or Emerging?	357
Surveillance	357
Infection-Based Surveillance	358
Colonization-Based Surveillance and Screening	358
Detection	359
How Do You Determine Drivers of AR?	359
Consideration of Known Risk Factors	359
Epidemiologic Studies	360
Molecular Epidemiology Methods	360
What Are Strategies to Prevent the Emergence of AR?	361
Increase Awareness	361
Infection Prevention and Control	362
Antibiotic Stewardship	363
Antibiotic Prescription Policies	365
Availability of Appropriate Agents	366
Generating Data to Improve Treatment Regimens	366
Vaccines	366
How Do We Mitigate the Impact of AR?	366
Global Governance	366

Addressing Economic Disincentives	367
Healthcare Advancement	368
Civil Society Engagement	368
What Are Key Public Health Research Questions Related to AR?	368
Conclusion	370
References	370

PART II Airborne Transmission 373

CHAPTER 16 Influenza 375

*Anna N. Chard, Mark W. Tenforde,
and Eduardo Azziz-Baumgartner*

Introduction	375
Historical Perspective	376
Clinical Course	381
Diagnosis, Prevention, and Treatment	382
Influenza Surveillance	386
Influenza Transmission and Epidemiology	388
References	391

CHAPTER 17 Measles 393

Simon Mutembo and William J. Moss

Introduction	393
Disease Burden	393
Estimating Measles Mortality	394
Biologic Characteristics of Measles Virus	396
Measles Virus Genes and Proteins	397
Pathogenesis	398
Immune Responses to Measles Virus	399
Measles Virus-Associated Immune Suppression	400
Clinical Disease and Complications	400
Laboratory Diagnosis of Measles	402
Epidemiologic Characteristics	402
Mode of Transmission	402
Reservoir	402
Incubation Period	402
Infectious Period	402
Infectivity	402
Maternally Acquired Anti-Measles Antibodies	403
Average Age of Infection	403
Geographic Distribution	403

Population Size and Measles Virus Transmission.....	404
Transmission Dynamics.....	404
Modeling Measles Virus Transmission Dynamics.....	404
Measles Mortality and Case Fatality.....	404
Nutritional Status.....	406
Sex Differences.....	406
Host Genetics.....	406
Measles Vaccines.....	406
Measures of Protection.....	407
Determinants and Duration of Protection.....	407
Optimal Age of Vaccination.....	407
Adverse Events Associated with Measles Vaccine.....	408
Measles Control, Elimination, and Eradication.....	409
Mortality Reduction.....	409
National and Regional Elimination.....	409
Global Eradication.....	411
Case Management.....	411
Vitamin A Prophylaxis.....	411
Surveillance and Outbreak Investigation.....	412
Molecular Epidemiology.....	412
Obstacles to Measles Control and Prospects for Eradication.....	412
Herd Immunity Threshold.....	412
Measles Outbreaks in Highly Vaccinated Populations.....	412
Failure to Vaccinate.....	413
Vaccine Failure.....	413
Subclinical Measles.....	413
HIV Pandemic.....	413
New Tools for Measles Eradication.....	413
Measles Eradication.....	414
Acknowledgments.....	414
References.....	414

CHAPTER 18 Tuberculosis..... 417

Kunchok Dorjee, Jonathan Golub, and Richard E. Chaisson

Introduction.....	417
Global Epidemiology.....	417
History of Global TB Control.....	418
The Organism.....	418
Clinical Manifestations.....	420
Epidemiologic Basis of TB Control.....	422

TB Transmission.....	423
TB Diagnosis.....	424
Diagnosing TB Infection.....	424
Diagnosing Active TB Disease.....	425
Therapy.....	426
History of Therapy.....	426
Current Therapy.....	427
Drug-Resistant TB.....	427
Active Case Finding and Screening for TB Infection.....	428
Tuberculosis Preventive Treatment (TPT).....	430
Risk of TB Exposure and Infection.....	430
Risk Factors Associated with TB Disease Progression.....	432
Time Since Infection.....	432
Age.....	433
Sex.....	433
Other Risk Factors of Note.....	435
Nutrition.....	436
Smoking.....	436
Diabetes Mellitus.....	436
HIV Infection and AIDS.....	437
Genetics.....	438
Alcohol, Mental Health, and Other Risk Factors.....	438
Bacillus Calmette-Guérin Vaccine Against TB.....	439
Tuberculosis Elimination: Challenges and Future Direction.....	439
Conclusion.....	440
References.....	441

CHAPTER 19 Acute Respiratory Infections.....447

W. Abdullah Brooks

Prologue: The Problem and the Opportunity.....	447
Introduction.....	448
Upper Respiratory Infections (URIs).....	448
Pneumonia.....	455
Natural History, Pathogenesis, and Pathology.....	456
Clinical Features.....	456
Childhood ALRI (Pneumonia).....	456
Etiology.....	457
Bacterial Pathogens.....	457
Bacterial Aetiology Prevention.....	458
Viral Agents.....	460

Adult CAP	464
Diagnostics	467
Acute Phase Reactants	467
Pulse Oximetry	468
Microbiological Diagnostics	468
Sputum Gram Stains and Culture	468
Blood Culture	469
Rapid Immunoassays	469
Additional Challenges with Interpreting Rapid Tests	470
Challenges in Low-Resource Settings with a High TB/HIV Disease Burden	470
Pfizer's 13-Plex Urine Antigen Diagnostic (UAD) Assay	470
Rapid Influenza Tests	472
Interventions for Acute Lower Respiratory Infections	472
Management of CAP in Infants and Children	472
Management of CAP in Adults	473
Prevention	474
Hib Vaccines	474
Pneumococcal Vaccines for Invasive Pneumococcal Disease (IPD)	475
Influenza Therapeutics and Vaccines	475
Therapeutics	475
Vaccines	475
RSV Vaccines and Others	475
Pathogen Agnostic Interventions	476
Surveillance	476
Acute Respiratory Disease Surveillance System Design and Methods	476
Clinical Syndrome Diagnosis	476
Etiological Diagnosis	478
Active versus Passive Surveillance	478
Timing of Surveillance Setup	479
Summary and Conclusions	480
References	480

**PART III Hygiene and
Infectious Disease
Transmission.....483**

**CHAPTER 20 Pathogens Transmitted
Through Inadequate Access to
Drinking Water, Sanitation, and
Hygiene485**

*Aybüke Koyuncu, Andrew S. Azman, Benjamin
Arnold, and Emily S. Gurley*

Introduction	485
--------------------	-----

Diarrheal Pathogens	488
Overview of Epidemiology	488
Diagnosis and Treatment	491
Sources of Epidemiologic Data for Diarrheal Pathogens	493
Prevention and Control	494
What Are the Key Public Health Research Questions?	495
Non-Diarrheal Enteric Pathogens	496
Overview of Epidemiology	496
Polio—Epidemiology	496
Polio—Diagnosis and Treatment	498
Polio—Sources of Epidemiologic Data	499
Polio—Prevention and Control	499
Polio—Key Public Health Research Questions	500
Typhoid Fever—Epidemiology	501
Typhoid—Diagnosis and Treatment	502
Typhoid—Sources of Epidemiologic Data	502
Typhoid—Prevention and Control	503
Typhoid—Key Public Health Research Questions	504
Hepatitis E—Epidemiology	504
Hepatitis E—Diagnosis and Treatment	504
Hepatitis E—Sources of Epidemiologic Data	505
Hepatitis E—Prevention and Control	506
Hepatitis E—Key Public Health Research Questions	506
Intestinal Helminths	506
Overview of Epidemiology	506
Conclusion	517
References	517

**PART IV Blood and Body
Fluid as a Reservoir
of Infectious
Diseases 521**

**CHAPTER 21 Human
Immunodeficiency Virus523**

*Carolyn Masters Williams
and Kenrad Nelson*

Introduction	523
The HIV/AIDS Pandemic	525
The HIV Virus	529
HIV Pathogenesis	531
AIDS-Related Opportunistic Infections	535

Host Factors in Susceptibility or Resistance to HIV Infection and Disease Progression	537
Inflammation and Microbial Translocation: Impact of Co-Infections on HIV	542
Antiretroviral Therapy	545
No Therapy to Monotherapy/Dual Therapy	545
Hit Early, Hit Hard	545
Treatment-Sparing Regimens	545
Viral Suppression and Cure	545
The Guidelines	546
HIV Genotypes	547
Modes of Transmission and Risk Factors	550
Sexual Transmission	550
Injection Drug Use	551
Perinatal Transmission	553
Transmission by Blood Transfusion, Blood Products, and Organ Transplantation	556
Prevention	557
Prevention of HIV/AIDS	557
Undetectable = Untransmissible	561
Social and Cultural Factors	564
Structural Approaches to HIV Prevention ...	566
Vaccine	567
Observational Epidemiology, Causal Inference, Data Science, and Implementation Science	570
Addressing the HIV Pandemic	572
Implementation Global HIV Programs	572
PEPFAR Program	573
The Future	574

CHAPTER 23 Sexually Transmitted Diseases..... 621

Michael A. Horberg

Introduction	621
Transmission Modes: The Definition of a Sexually Transmitted Disease	622
STI: A Disease of Disparities	623
STI Epidemiology and Behavior	623
National Surveys	625
A Comment About Treatments	628
Use of Epidemiologic Models to Guide Control Efforts	628
Promoting Condom Use	630
Behavioral Models as Interventions	630
Barriers to Effective STI Prevention	631
Barriers for Providers	631
Barriers to Patients	632
Barriers to Screening	632
Core Groups and Targeting	632
Social Networks	632
Geographically Directed Screening	634

Practical Issues: Guides for Healthcare Providers	634
STI Control Methods	634
Preventive Treatment to Control Transmission of STIs	634
Vaccination to Prevent Transmission of HPV and Prevent Cervical Cancer	634
Home Collection of Urogenital Specimens	634
Circumcision to Reduce HIV Transmission	635
Future Considerations	635
Notable STI	636
Chlamydia and Gonorrhea	636
Pelvic Inflammatory Disease (PID) and Perinatal Infection	638
Diagnosis	640
Population-Based Surveys for Chlamydia and Gonorrhea Diagnostic Testing	640
Epidemiology	641
Syphilis	642
Epidemiology	642
Diagnosis of Syphilis	647
Syphilis in HIV-Infected Individuals	647
Role of the Syphilis Registry	647
Partner Notification	647
Chancroid	648
Trichomonas	650
Diagnosis	650
Epidemiology	651
Bacterial Vaginosis	651
Genital Herpes Infection	652
Human Papillomavirus Infection	656
Treatment	658
Clinical Screening for High-Risk HPV—The Pap Smear Approach	658
Clinical Screening for High-Risk HPV—The NAAT Swab Approach	658
Prevention and HPV Vaccines	659
References	659

PART V Vector-Borne Diseases 663

CHAPTER 24 Aedes-Borne Infections 665

Hannah Clapham

Introduction	665
Aedes	665
Aedes Control	668

Dengue	672
Clinical Disease, Diagnosis, and Treatment	672
Transmission, Surveillance, and Epidemiologic Studies	673
Vaccines	675
Most Important Epidemiologic Questions	675

CHAPTER 25 Rickettsial Diseases 683

Andrés F. Londoño, Juan Carlos Quintero-Vélez, and J. Stephen Dumler

Introduction and Historical Perspective	683
Vectors and Reservoirs	687
Spotted Fever Rickettsiosis and Tick Transmission	687
Flea-Borne Typhus Rickettsiosis (Murine Typhus)	688
Scrub Typhus and Chigger Transmission	688
Human Disease Epidemiology	689
Spotted Fever Rickettsiosis and Rocky Mountain Spotted Fever	689
Murine Typhus and Scrub Typhus	692
Clinical Course and Treatment	692
Clinical Presentation	692
RMSF and Spotted Fever Rickettsiosis	692
Murine Typhus and Scrub Typhus	693
Diagnosis and Treatment	693
Prevention	693

CHAPTER 26 Tick-Borne Infections in the United States697

Sara Locke, Rhea E. Karty, and Peter J. Krause

Overview	697
Epidemiological Tools	698
Ecology of Tick-Borne Disease	701
Lyme Disease	701
Etiology	701
Location and Frequency	701
Location and Frequency	702
Clinical Manifestations	702
Risk Factors	704
Human Granulocytic Anaplasmosis	705
Etiology	705
Location and Frequency	705
Clinical Manifestations	706
Risk Factors	706
Transfusion and Organ Transplant Transmission	707
Babesiosis	707
Etiology	707
Location and Frequency	707
Clinical Manifestations	708
Risk Factors	709
Co-Infection	709
Heath Burden and Prevention of Lyme Disease, HGA, and Babesiosis	710
Conclusions	712

CHAPTER 27 Malaria..... 717

Matthew M. Ippolito and William J. Moss

Introduction	717
Biology of Malaria	717
Malaria Parasites and Life Cycle	717

Sporogonic Development	719
Biological Differences Across <i>Plasmodium</i> Species	720
Molecular Biology of <i>Plasmodium</i>	720
Anopheline Mosquitoes	721
Host Immunity	722
Clinical Malaria	723
Spectrum of Illness	723
Pregnancy as a Major Risk Factor	724
Diagnosis and Treatment	724
Diagnostic Modalities	724
Antimalarial Chemotherapy	725
Epidemiology	727
Malaria in Context	728
Agriculture and Environmental Engineering	728
Human Migration	728
Malaria in Areas of Conflict and Humanitarian Emergencies	729
Urban Migration	729
Health-Seeking Behavior	729
Climate Change	730
Estimating Malaria Burden	730
Mathematical Models of Malaria	730
Control and Elimination	731
Vector Control Methods	732
Treatment-Based Strategies	734
Vaccines	734
The Global Eradication Agenda	735
Acknowledgment	737
