

Constantine M. Dafermos

# Hyperbolic Conservation Laws in Continuum Physics

Fifth Edition

 Springer

---

# Contents

<b>I</b>	<b>Balance Laws</b> .....	1
1.1	Formulation of the Balance Law .....	2
1.2	Reduction to Field Equations .....	3
1.3	Change of Coordinates and a Trace Theorem .....	8
1.4	Systems of Balance Laws. Classical, Weak and Measure-Valued Solutions.....	14
1.5	Companion Balance Laws .....	17
1.6	Weak and Shock Fronts .....	21
1.7	Rapid Oscillations, Concentrations, Young Measures and Measure-Valued Solutions .....	24
1.8	Survey of the Theory of <i>BV</i> Functions .....	29
1.9	<i>BV</i> Solutions of Systems of Balance Laws .....	33
1.10	Notes .....	35
<b>II</b>	<b>Introduction to Continuum Physics</b> .....	37
2.1	Kinematics .....	37
2.2	Balance Laws of Continuum Physics in Eulerian and Lagrangian Coordinates .....	40
2.3	The Balance Laws of Continuum Thermomechanics .....	44
2.4	Material Frame Indifference .....	48
2.5	Thermoelastic Media; Fluids and Isotropic Solids .....	49
2.6	Thermoviscoelastic Media; Newtonian Fluids.....	56
2.7	Incompressibility .....	60
2.8	Relaxation .....	61
2.9	Notes .....	62
<b>III</b>	<b>Hyperbolic Systems of Balance Laws</b> .....	65
3.1	Hyperbolicity .....	65
3.2	Weak Waves; Shock Waves; Rankine-Hugoniot Conditions ....	67
3.3	Entropy-Entropy Flux Pairs; Relative Entropy .....	68
3.4	Examples of Hyperbolic Systems of Balance Laws .....	70

	3.5	Notes .....	88
<b>IV</b>	<b>The Cauchy Problem .....</b>		<b>93</b>
	4.1	The Cauchy Problem: Classical Solutions .....	93
	4.2	Breakdown of Classical Solutions .....	95
	4.3	The Cauchy Problem: Weak and Measure-Valued Solutions ...	97
	4.4	Nonuniqueness of Weak Solutions .....	100
	4.5	Entropy Admissibility Condition; Dissipative Weak Solutions ..	101
	4.6	Admissibility and Construction of Measure-Valued Solutions ..	110
	4.7	The Vanishing Viscosity Approach .....	115
	4.8	Initial-Boundary Value Problems .....	122
	4.9	Notes .....	126
<b>V</b>	<b>Entropy and the Stability of Classical Solutions .....</b>		<b>129</b>
	5.1	Convex Entropy and the Existence of Classical Solutions .....	130
	5.2	Relative Entropy and Weak-Strong Uniqueness and Stability ...	141
	5.3	Involutions and Contingent Entropies .....	150
	5.4	Contingent Entropies and Polyconvexity .....	163
	5.5	The Role of Damping, Relaxation and Dispersion .....	177
	5.6	Initial-Boundary Value Problems; Piecewise Smooth Solutions ..	192
	5.7	Notes .....	201
<b>VI</b>	<b>The General Theory for Scalar Conservation Laws .....</b>		<b>207</b>
	6.1	Classical Solutions and Wave Breaking .....	208
	6.2	Admissible Weak Solutions and their Stability Properties .....	211
	6.3	The Method of Vanishing Viscosity .....	217
	6.4	Solutions as Trajectories of a Contraction Semigroup .....	222
	6.5	The Layering Method .....	228
	6.6	Relaxation .....	232
	6.7	A Kinetic Formulation .....	238
	6.8	Regularity and Fine Structure of $L^\infty$ Solutions .....	245
	6.9	Regularity and Long Time Behavior of Solutions .....	254
	6.10	Initial-Boundary Value Problems .....	261
	6.11	The $L^1$ Theory for Systems of Conservation Laws .....	267
	6.12	Notes .....	270
<b>VII</b>	<b>Hyperbolic Systems of Balance Laws in One-Space Dimension .....</b>		<b>275</b>
	7.1	Balance Laws in One-Space Dimension .....	275
	7.2	Hyperbolicity and Strict Hyperbolicity .....	283
	7.3	Riemann Invariants .....	286
	7.4	Entropy-Entropy Flux Pairs .....	291
	7.5	Genuine Nonlinearity and Linear Degeneracy .....	293
	7.6	Simple Waves .....	295
	7.7	Explosion of Weak Fronts .....	300
	7.8	Existence and Breakdown of Classical Solutions .....	301

7.9	Weak Solutions .....	306
7.10	Notes .....	306
<b>VIII</b>	<b>Admissible Shocks .....</b>	<b>311</b>
8.1	Strong Shocks, Weak Shocks, and Shocks of Moderate Strength	311
8.2	The Hugoniot Locus .....	314
8.3	The Lax Shock Admissibility Criterion; Compressive, Overcompressive and Undercompressive Shocks .	320
8.4	The Liu Shock Admissibility Criterion .....	326
8.5	The Entropy Shock Admissibility Criterion.....	328
8.6	Viscous Shock Profiles and the Vanishing Viscosity Shock Admissibility Criterion.....	332
8.7	Physical Viscosity Versus Thermal Conductivity .....	344
8.8	Shock Profiles Induced by Stiff Dissipative Source and the Vanishing Relaxation Time Shock Admissibility Criterion .....	348
8.9	Nonconservative Shocks .....	352
8.10	Notes .....	352
<b>IX</b>	<b>Admissible Wave Fans and the Riemann Problem.....</b>	<b>359</b>
9.1	Self-Similar Solutions and the Riemann Problem .....	359
9.2	Wave Fan Admissibility Criteria .....	363
9.3	Solution of the Riemann Problem via Wave Curves .....	365
9.4	Systems with Genuinely Nonlinear or Linearly Degenerate Characteristic Families .....	368
9.5	General Strictly Hyperbolic Systems .....	373
9.6	Failure of Existence or Uniqueness; Delta Shocks and Transitional Waves .....	377
9.7	The Entropy Rate Admissibility Criterion .....	380
9.8	Viscous Wave Fans and the Vanishing Viscosity Wave Fan Admissibility Criterion.....	393
9.9	Interaction of Wave Fans .....	406
9.10	Breakdown of Weak Solutions .....	414
9.11	Notes .....	417
<b>X</b>	<b>Generalized Characteristics .....</b>	<b>423</b>
10.1	Regulated Solutions .....	423
10.2	Generalized Characteristics .....	426
10.3	Special Generalized Characteristics .....	428
10.4	Notes .....	431
<b>XI</b>	<b>Scalar Conservation Laws in One Space Dimension .....</b>	<b>433</b>
11.1	Regulated Solutions and Generalized Characteristics .....	434
11.2	The Spreading of Rarefaction Waves .....	438
11.3	Regularity of Solutions .....	439
11.4	Divides, Invariants and the Lax Formula .....	447
11.5	Decay of Solutions Due to Entropy Production.....	451

11.6	Spreading of Characteristics and Development of $N$ -Waves . . . .	454
11.7	Confinement of Characteristics and Formation of Saw-Toothed Profiles . . . . .	455
11.8	Comparison Theorems and Stability in $L^1$ , $L^2$ and in Wasserstein Distance . . . . .	458
11.9	Scalar Balance Laws . . . . .	471
11.10	Balance Laws with Linear Excitation . . . . .	475
11.11	An Inhomogeneous Conservation Law . . . . .	478
11.12	Nonconvex Flux . . . . .	483
11.13	Long Time Behavior When the Flux Is Nonconvex . . . . .	494
11.14	Entropy Production in Continuous Solutions . . . . .	500
11.15	Shock Generation in the Burgers Equation . . . . .	505
11.16	Hopf-Cole Transformation and Zero Viscosity Limit at Shock Generation Points . . . . .	508
11.17	Notes . . . . .	512
<b>XII</b>	<b>Genuinely Nonlinear Systems of Two Conservation Laws . . . . .</b>	<b>519</b>
12.1	Notation and Assumptions . . . . .	519
12.2	Entropy-Entropy Flux Pairs; Hodograph Transformation . . . . .	521
12.3	Local Structure of Solutions . . . . .	524
12.4	Propagation of Riemann Invariants Along Extremal Backward Characteristics . . . . .	527
12.5	Bounds on Solutions . . . . .	544
12.6	Spreading of Rarefaction Waves . . . . .	556
12.7	Regularity of Solutions . . . . .	561
12.8	Initial Data in $L^1$ . . . . .	563
12.9	Initial Data with Compact Support . . . . .	567
12.10	Periodic Solutions . . . . .	573
12.11	Notes . . . . .	577
<b>XIII</b>	<b>The Random Choice Method . . . . .</b>	<b>581</b>
13.1	The Construction Scheme . . . . .	582
13.2	Compactness and Consistency . . . . .	584
13.3	Wave Interactions in Genuinely Nonlinear Systems . . . . .	590
13.4	The Glimm Functional for Genuinely Nonlinear Systems . . . . .	593
13.5	Bounds on the Total Variation for Genuinely Nonlinear Systems . . . . .	598
13.6	Bounds on the Supremum for Genuinely Nonlinear Systems . . . . .	600
13.7	General Systems . . . . .	602
13.8	Wave Tracing . . . . .	605
13.9	Notes . . . . .	608
<b>XIV</b>	<b>The Front Tracking Method and the Standard Riemann Semigroup . . . . .</b>	<b>611</b>
14.1	Front Tracking for Scalar Conservation Laws . . . . .	612
14.2	Front Tracking for Genuinely Nonlinear Systems of Conservation Laws . . . . .	615
14.3	The Global Wave Pattern . . . . .	619

14.4	Approximate Solutions . . . . .	620
14.5	Bounds on the Total Variation . . . . .	622
14.6	Bounds on the Combined Strength of Pseudoshocks . . . . .	625
14.7	Compactness and Consistency . . . . .	628
14.8	Continuous Dependence on Initial Data . . . . .	630
14.9	The Standard Riemann Semigroup . . . . .	634
14.10	Continuous Glimm Functionals, Spreading of Rarefaction Waves and Structure of Solutions . . . . .	636
14.11	Stability of Strong Waves . . . . .	639
14.12	Notes . . . . .	641
<b>XV</b>	<b>Construction of BV Solutions by the Vanishing Viscosity Method . .</b>	<b>645</b>
15.1	Statement of the General Existence Theorem . . . . .	645
15.2	Road Map to the Proof of Theorem 15.1.1 . . . . .	647
15.3	The Effects of Diffusion . . . . .	649
15.4	Decomposition into Viscous Traveling Waves . . . . .	651
15.5	Transversal Wave Interactions . . . . .	655
15.6	Interaction of Waves of the Same Family . . . . .	659
15.7	Energy Estimates . . . . .	664
15.8	Stability Estimates . . . . .	667
15.9	The Viscosity Semigroup . . . . .	670
15.10	Uniqueness of Solutions . . . . .	671
15.11	Weak-BV Uniqueness and Stability for the Euler Equations . . . .	678
15.12	Vanishing Physical Viscosity . . . . .	682
15.13	Notes . . . . .	687
<b>XVI</b>	<b>BV Solutions for Systems of Balance Laws . . . . .</b>	<b>691</b>
16.1	The Cauchy Problem . . . . .	692
16.2	Strong Dissipation . . . . .	695
16.3	Redistribution of Damping . . . . .	700
16.4	Bounds on the Variation . . . . .	703
16.5	$L^1$ Stability Via Entropy with Conical Profile at the Origin . . . .	714
16.6	$L^1$ Stability when the Source is Partially Dissipative . . . . .	717
16.7	Zero Relaxation Limit . . . . .	732
16.8	Notes . . . . .	744
<b>XVII</b>	<b>Compensated Compactness . . . . .</b>	<b>747</b>
17.1	Compensated Compactness and the div-curl Lemma . . . . .	747
17.2	From Measure-Valued to Weak Solutions Via Compensated Compactness . . . . .	749
17.3	Scalar Conservation Laws . . . . .	752
17.4	Genuinely Nonlinear Systems of Two Conservation Laws . . . . .	753
17.5	The System of Isentropic Elasticity . . . . .	756
17.6	Zero Relaxation Limit for the Isentropic Elasticity System . . . .	761
17.7	The System of Isentropic Gas Dynamics . . . . .	767
17.8	Notes . . . . .	774

<b>XVIII</b>	<b>Steady and Self-similar Solutions in Multi-Space Dimensions</b> . . . . .	779
18.1	Self-Similar Solutions for Multidimensional Scalar Conservation Laws . . . . .	779
18.2	Steady Planar Isentropic Gas Flow . . . . .	782
18.3	Self-Similar Planar Irrotational Isentropic Gas Flow . . . . .	787
18.4	Supersonic Isentropic Gas Flow Past a Ramp . . . . .	791
18.5	Regular Shock Reflection on a Wall . . . . .	796
18.6	Shock Collision with a Ramp . . . . .	799
18.7	Isometric Immersions . . . . .	802
18.8	Cavitation in Elastodynamics . . . . .	806
18.9	Notes . . . . .	810
<b>XIX</b>	<b>Euler Equations</b> . . . . .	815
19.1	The Euler Equations in Lagrangian and Eulerian Coordinates; Irrotational Flow . . . . .	816
19.2	Local Classical Solutions to the Cauchy Problem . . . . .	821
19.3	Expansion of Gas in Vacuum . . . . .	824
19.4	Breakdown of Classical Solutions to the Cauchy Problem . . . . .	828
19.5	Weak Solutions to the Cauchy Problem for the Ideal Gas . . . . .	835
19.6	Turbulent Weak Solutions via Convex Integration . . . . .	840
19.7	Measure-Valued and Relaxed Solutions; the Quest for Admissibility and Uniqueness . . . . .	851
19.8	Notes . . . . .	856
	<b>Bibliography</b> . . . . .	863
	<b>Author Index</b> . . . . .	1025
	<b>Subject Index</b> . . . . .	1039
