

James K. Baird

Electromagnetism for Chemistry

Contents

1	Electrostatics	1
1.1	Historical Connection Between Chemistry and Electricity	1
1.2	Units	3
1.3	The Electrostatic Force and the Electric Field	9
1.4	Law of Superposition of Charge	11
1.5	Electrostatic Energy of Point Charges	16
1.6	Electrostatic Potential of a Point Charge	19
1.7	Electrostatic Potential and Electric Field of a Point Electric Dipole	22
1.8	Potential Energy of a Dipole in an External Electric Field	27
1.9	Interaction Energy of Two Point Electric Dipoles	29
1.10	The Electrostatic Potential of a Point Electric Quadrupole	31
1.11	Potential, Electric Field, and Interaction Energy of Volume Charge Distributions	33
1.12	Gauss' Law	34
1.13	Perfect Conductors	35
1.14	Legendre Polynomials	36
1.15	Earnshaw's Theorem and the Stability of Matter	36
	References	39
2	Thermodynamics and Statistical Mechanics	41
2.1	Introduction to Thermodynamics and Statistical Mechanics	42
2.2	First Law of Thermodynamics	43
2.3	The Second Law of Thermodynamics	47
2.4	Entropy of Mixing of Ideal Gases	50
2.5	The Free Energies and the Enthalpy	52
2.6	Gibbs Free Energy for the Pure Ideal Gas and the Pure Solid	55
2.7	Chemical Potential of a Solute	57
2.8	Gibbs–Duhem Equation	59

2.9	Statistical Mechanics in the Canonical Ensemble	62
2.10	The Planck Frequency Distribution	71
2.11	Statistical Mechanics in the Grand Canonical Ensemble	76
2.12	Theory of Fluctuations	80
2.13	The Fluctuation $\langle(\Delta N)^2\rangle$ in a Compressible Fluid	83
2.14	Solute Concentration Fluctuations	85
2.15	Osmotic Compressibility	86
	Recommended Additional Reading	89
3	Continuum Theory of Dielectrics	91
3.1	Introduction	92
3.2	The Polarization and the Displacement	93
3.3	Coulomb's Law for Free Charges in a Continuous Dielectric	98
3.4	Electric Field and Potential Due to a Distribution of Free Charges in a Dielectric	101
3.5	Lorentz Local Electric Field and the Clausius–Mossotti Dielectric Equation of State	101
3.6	Boundary Conditions in a Dielectric	105
3.7	Solution to Laplace's Equation in Cartesian Coordinates	109
3.8	Solution to Laplace's Equation for a Spherical Cavity in a Continuous Dielectric Subject to a Uniform External Electric Field	113
3.9	Solution to Laplace's Equation for a Point Dipole at the Center of a Spherical Cavity in a Continuous Dielectric	121
3.10	The Onsager Local Electric Field and the Bottcher–Onsager Equation of State for a Non-polar Dielectric	126
3.11	Solvatochromism	131
3.12	Lorenz–Lorentz Equation and Landolt's Rule	134
3.13	Onsager Theory of Polar Dielectrics	137
3.13.1	Induced Dipole ($\mathbf{p}_\alpha$), Reaction Field ($\mathbf{R}_\alpha$), and Directing Field ($\mathbf{F}_\alpha$)	137
3.13.2	Permanent Electric Dipole ($\boldsymbol{\mu}$), Reaction Field ($\mathbf{R}_\mu$), and Local Field ($\mathbf{F}_\mu$)	138
3.13.3	Superposition of an Induced Dipole and a Permanent Dipole	144
3.14	Application of the Onsager Local Electric Field Concept to Solution Thermodynamics	147
3.15	Debye Electromagnetic Equation of State for Polar Dielectrics	150
3.16	Discussion	152
