## Part I Geometry

<b>1 Preliminaries</b>	<b>3</b>
1.1 Linear algebra	3
1.1.1 Vectors and matrices	3
1.1.2 Symmetric bilinear forms	5
1.1.3 Vector subspaces	6
1.1.4 Linear maps from $\mathbb{R}^n$ to $\mathbb{R}^n$	7
1.1.5 A convention	9
1.2 Vector calculus	9
1.2.1 Vector-valued functions and differentials	9
1.2.2 Taylor expansion and extrema	11
1.2.3 Extrema and Lagrange multiplier theorem	12
<b>2 Euclidean Geometry</b>	<b>15</b>
2.1 Orthogonal transformations	15
2.2 Rigid motions	16
2.3 Translation of vector subspaces	18
2.4 Conformal transformations	20
2.5 Orthonormal basis	20
2.6 Orthogonal projections	23
2.7 Areas and volumes	25
<b>3 Geometry of Graphs</b>	<b>29</b>
3.1 Graphs in Euclidean spaces	29
3.2 Normal sections	31
3.3 Cross sections in high dimension	33

3.4	First fundamental forms	33
<b>4</b>	<b>Curvatures</b>	<b>35</b>
4.1	Normal curvatures	35
4.1.1	Definition	35
4.1.2	Principal curvatures and principal directions	37
4.2	Sectional curvatures	40
<b>5</b>	<b>Transformations and Invariance</b>	<b>43</b>
5.1	Change of coordinates	43
5.2	Non-linear conformal transformations	44
5.3	Invariant curvatures	46
 <b>Part II Statistics</b>		
<b>6</b>	<b>Discrete Random Variables and Related Concepts</b>	<b>51</b>
6.1	Preliminaries	51
6.2	Discrete random variables	52
6.2.1	Discrete random variables and probability function	52
6.2.2	Relative frequency histogram	55
6.2.3	Cumulative distribution function	55
6.3	Population parameters and sample statistics	56
6.3.1	Population mean and expected value	56
6.3.2	Sample statistic	57
6.3.3	Sample mean	57
6.3.4	Sample and population variances	58
6.4	Mathematical expectations	60
6.5	Maximum likelihood estimation	61
6.6	Maximum likelihood estimation of the probability of a Bernoulli experiment	62
<b>7</b>	<b>Continuous Random Variables and Related Concepts</b>	<b>65</b>
7.1	Continuous random variables	65
7.2	Mathematical expectation for continuous random variables	66
7.3	Mean and variance and their sample estimates	66
7.4	Basic properties of expectations	67
7.5	Normal distribution	68
7.6	Maximum likelihood estimation for continuous variables	72

7.7	Maximum likelihood estimation for the parameters of normal distribution . . . . .	73
7.8	Sampling distribution . . . . .	74
<b>8</b>	<b>Bivariate and Multivariate Distribution . . . . .</b>	<b>77</b>
8.1	Bivariate distribution for discrete random variables . . . . .	77
8.1.1	Joint probability function . . . . .	77
8.1.2	Marginal probability function . . . . .	78
8.1.3	Conditional probability function . . . . .	79
8.2	Bivariate distribution for continuous random variables . . . . .	80
8.3	Mathematical expectations . . . . .	80
8.3.1	Mathematical expectations for the functions of two random variables . . . . .	80
8.4	Covariance and correlation . . . . .	82
8.4.1	Sample covariance and correlation . . . . .	82
8.4.2	Population covariance and correlation . . . . .	84
8.4.3	Conditional expectations . . . . .	85
8.5	Bivariate normal distribution . . . . .	87
8.6	Independence . . . . .	88
8.7	Multivariate distribution . . . . .	89
<b>9</b>	<b>Simple Linear Regression . . . . .</b>	<b>93</b>
9.1	The model . . . . .	93
9.2	The least squares estimation . . . . .	95
9.3	The maximum likelihood estimation of regression parameters . . . . .	98
9.4	Residuals . . . . .	99
9.5	Coefficient of determination . . . . .	101
9.6	Weighted least squares estimates . . . . .	103
<b>10</b>	<b>Topics on Linear Regression Analysis . . . . .</b>	<b>105</b>
10.1	Multiple regression model . . . . .	105
10.2	Estimation and interpretation . . . . .	106
10.3	Influential observations and outliers . . . . .	110
10.4	Leverage . . . . .	111
10.5	Cook's distance . . . . .	113
10.6	Deletion influence, joint influence and masking effect . . . . .	114
10.7	Derivation of Cook's distances . . . . .	116
10.7.1	Weighted least squares and Cook's distance . . . . .	116
10.7.2	Cook's distance – deleting one data point . . . . .	118

### Part III Local Influence Analysis

<b>11</b>	<b>Basic Concepts</b> .....	123
11.1	Introduction .....	123
11.2	Perturbation .....	125
11.3	Likelihood displacement and influence graph .....	126
<b>12</b>	<b>Measuring Local Influence</b> .....	129
12.1	Individual influence .....	130
12.2	Derivation of normal curvature .....	131
12.3	Case-weight perturbation — an example .....	133
12.4	Roles of sectional curvature .....	135
12.5	Joint influence .....	138
<b>13</b>	<b>Relations Among Various Measures</b> .....	141
13.1	A bound on influence measures .....	141
13.2	Individual and overall joint influence .....	143
13.3	Individual and joint influence measures .....	146
13.4	Competing eigenvalues .....	147
13.5	Conclusions .....	150
<b>14</b>	<b>Conformal Modifications</b> .....	153
14.1	Modification and invariance .....	153
14.2	Invariant measures .....	154
14.3	Benchmarks .....	155
14.4	Individual's contribution to joint influence — re-visited .....	157
<b>Appendix A</b>	<b>Rank of Hat Matrix</b> .....	161
<b>Appendix B</b>	<b>Ricci Curvature</b> .....	163
<b>Appendix C</b>	<b>Cook's Distance — Deleting Two Data Points</b> .....	165
<b>Bibliography</b>	.....	167
<b>Index</b>	.....	171
