|                                                             |    |
|-------------------------------------------------------------|----|
| <i>Foreword</i>                                             | v  |
| <i>Preface</i>                                              | ix |
| 1. Introduction                                             | 1  |
| 2. Market Framework                                         | 9  |
| 2.1 Studied Quantities . . . . .                            | 10 |
| 2.1.1 Financial Assets . . . . .                            | 10 |
| 2.1.2 Portfolios . . . . .                                  | 12 |
| 2.1.3 Distribution Parameters . . . . .                     | 19 |
| 2.2 The Question of Time . . . . .                          | 22 |
| 2.2.1 Choosing the Measure of Time . . . . .                | 22 |
| 2.2.2 Choosing the Scale of Time . . . . .                  | 25 |
| 3. Statistical Description of Markets                       | 31 |
| 3.1 Construction of a Representation . . . . .              | 32 |
| 3.1.1 Role of the Statistical Description . . . . .         | 32 |
| 3.1.2 Continuous or Discontinuous Representations . . . . . | 32 |
| 3.2 Normality Tests . . . . .                               | 34 |
| 3.2.1 The Pearson–Fisher Coefficients . . . . .             | 35 |
| 3.2.2 Kolmogorov Test . . . . .                             | 37 |
| 3.3 Discontinuity Test . . . . .                            | 39 |
| 3.3.1 Definition of Estimators . . . . .                    | 39 |
| 3.3.2 Confidence Intervals . . . . .                        | 41 |
| 3.4 Continuity Test . . . . .                               | 45 |
| 3.4.1 Definition of the Estimators . . . . .                | 45 |

|       |                                                                                  |     |
|-------|----------------------------------------------------------------------------------|-----|
| 3.4.2 | Confidence Interval . . . . .                                                    | 46  |
| 3.5   | Testing the Finiteness of the Activity . . . . .                                 | 47  |
| 3.5.1 | Construction of the Tests . . . . .                                              | 48  |
| 3.5.2 | Illustration . . . . .                                                           | 50  |
| 4.    | Lévy Processes . . . . .                                                         | 53  |
| 4.1   | Definitions and Construction . . . . .                                           | 54  |
| 4.1.1 | The Characteristic Exponent . . . . .                                            | 54  |
| 4.1.2 | Infinitely Divisible Distributions . . . . .                                     | 54  |
| 4.1.3 | A Construction with Poisson Processes . . . . .                                  | 55  |
| 4.2   | The Lévy–Khintchine Formula . . . . .                                            | 60  |
| 4.2.1 | Form of the Characteristic Exponent . . . . .                                    | 60  |
| 4.2.2 | The Lévy Measure . . . . .                                                       | 62  |
| 4.3   | The Moments of Lévy Processes of Finite Variation . . . . .                      | 67  |
| 4.3.1 | Existence of the Moments . . . . .                                               | 68  |
| 4.3.2 | Calculating the Moments . . . . .                                                | 69  |
| 5.    | Stable Distributions and Processes . . . . .                                     | 77  |
| 5.1   | Definitions and Properties . . . . .                                             | 78  |
| 5.1.1 | Definitions . . . . .                                                            | 78  |
| 5.1.2 | Characteristic Function and Lévy Measure . . . . .                               | 81  |
| 5.1.3 | Some Special Cases of Stable Distributions . . . . .                             | 90  |
| 5.1.4 | Simulating Paths of Stable Processes . . . . .                                   | 94  |
| 5.2   | Stable Financial Models . . . . .                                                | 100 |
| 5.2.1 | With Pure Stable Distributions . . . . .                                         | 100 |
| 5.2.2 | With Tempered Stable Distributions . . . . .                                     | 101 |
| 6.    | Laplace Distributions and Processes . . . . .                                    | 105 |
| 6.1   | The First Laplace Distribution . . . . .                                         | 106 |
| 6.1.1 | The Intuitive Approach . . . . .                                                 | 106 |
| 6.1.2 | Representations of the Laplace Distribution . . . . .                            | 108 |
| 6.1.3 | Laplace Motion . . . . .                                                         | 117 |
| 6.2   | The Asymmetrization of the Laplace Distribution . . . . .                        | 129 |
| 6.2.1 | Construction of the Asymmetrization . . . . .                                    | 129 |
| 6.2.2 | Laplace Processes . . . . .                                                      | 134 |
| 6.3   | The Laplace Distribution as the Limit of Hyperbolic Dis-<br>tributions . . . . . | 136 |
| 6.3.1 | Motivation for Hyperbolic Distributions . . . . .                                | 138 |

|       |                                                             |     |
|-------|-------------------------------------------------------------|-----|
| 6.3.2 | Construction of Hyperbolic Distributions . . . . .          | 139 |
| 6.3.3 | Hyperbolic Distributions as Mixture Distributions . . . . . | 143 |
| 7.    | The Time Change Framework . . . . .                         | 147 |
| 7.1   | Time Changes . . . . .                                      | 148 |
| 7.1.1 | Historical Survey . . . . .                                 | 148 |
| 7.1.2 | A First Modeling Example . . . . .                          | 149 |
| 7.2   | Subordinated Brownian Motions . . . . .                     | 155 |
| 7.2.1 | The Mechanics of Subordination . . . . .                    | 155 |
| 7.2.2 | Construction of a Time Change . . . . .                     | 158 |
| 7.2.3 | Brownian Motion in Gamma Time . . . . .                     | 165 |
| 7.3   | Time-Changed Laplace Process . . . . .                      | 173 |
| 7.3.1 | Mean-Reverting Clock . . . . .                              | 174 |
| 7.3.2 | The Laplace Process in ICIR Time . . . . .                  | 178 |
