Preface **vii**

1 A bit of math: vectors, tensors, Fourier transform, etc. **1**
Problems 1.0.1 to 1.0.8

2 Electrodynamics **21**
2.1 The tensor of dielectric permeability. Electromagnetic waves in a medium. 21
Problems 2.1.1 to 2.1.17
2.2 Natural optical activity. The Faraday and Kerr effects. . . . 47
Problems 2.2.1 to 2.2.8
2.3 The frequency dispersion of the electric permittivity. The propagation of electromagnetic waves. 60
Problems 2.3.1 to 2.3.6
2.4 Cherenkov radiation. Transition radiation. 73
Problems 2.4.1 to 2.4.6
2.5 Non-linear interaction of waves 88
Problems 2.5.1 to 2.5.11

3 Fluid dynamics **105**
3.1 Dynamics of an ideal fluid 105
Problems 3.1.1 to 3.1.19
3.2 Viscous fluids 134
Problems 3.2.1 to 3.2.6
3.3 Convection and turbulence 143
Problems 3.3.1 to 3.3.9
3.4 Sound waves 161
Problems 3.4.1 to 3.4.8
3.5 Shock waves. Solitons 173
Problems 3.5.1 to 3.5.7

4 Magnetohydrodynamics **185**
4.1 Ideal MHD. Magnetostatic equilibria. Excess magnetic energy. 185
Problems 4.1.1 to 4.1.5
4.2 MHD waves. Alfven resonance. 193
Problems 4.2.1 to 4.2.5

4.3 Magnetic reconnection 202
Problems 4.3.1 to 4.3.7

5 Theory of elasticity **225**
5.1 Mechanics of solid bodies 225
Problems 5.1.1 to 5.1.6
5.2 Mechanics of liquid crystals 236
Problems 5.2.1 to 5.2.8

Index **251**
