Contents

List of Figures xv
Introduction xxxi

1. Unity of the Universe 1
1.1 Cosmic Abundance of the Chemical Elements 1
1.2 Some Examples 3
Problems 5

2. The Sun and Other Stars 7
2.1 The Galaxy, Field Stars, Binaries and Clusters 7
2.2 Composition of Stars 9
2.3 Interstellar Medium 10
2.4 Dense Cool Clouds 10
2.5 Heating and Cooling of Galactic Gases 12
2.6 Scenario for Producing a Dark Cool Cloud 14
2.7 Formation of a Galactic Cluster 15
2.8 Main-Sequence Stars and Their Evolution 16
2.9 Stars, Brown Dwarfs and Planets 16
2.10 Stellar Planetary Systems 17
Problems 21

3. The Planets 23
3.1 Overview of the Planets 23
3.2 Orbital Motions 23
3.3 Orbits of the Planets 27
3.4 Planetary Structures: General Considerations 28
3.4.1 Planetary Magnetic Fields 32
Problems 34

4. The Terrestrial Planets 35
4.1 Mercury 35
4.1.1 Surface of Mercury 36
4.1.2 Mercury's Magnetic Field 38
4.1.3 Mercury Summary 39
4.2 Venus 39
4.2.1 Surface of Venus 41
4.2.2 Atmosphere of Venus 43
4.2.3 Venus and Magnetism 45
4.2.4 Venus Summary 45
4.3 Earth 45
4.3.1 Shape of the Earth 46
4.3.2 Surface Composition and Age 46
4.3.3 Changing Surface Features 47
4.3.4 Surface Plate Structure 50

4.3.5 Heat Flow through the Surface 53
4.3.6 Earthquakes 55
4.3.6.1 Crust 59
4.3.6.2 Mantle 59
4.3.6.3 Core 59
4.3.7 Earth's Atmosphere 60
4.3.8 Earth's Magnetic Field 60
4.3.9 Earth Summary 60
4.4 Mars 61
4.4.1 Surface of Mars 62
4.4.1.1 Highlands 64
4.4.1.2 Plains 66
4.4.1.3 Volcanic Regions 66
4.4.1.4 Channels and Canyons 69
4.4.2 Consequences of Early Water 70
4.4.3 Space Missions to Mars 71
4.4.4 Atmosphere of Mars 74
4.4.5 Magnetism and Mars 76
4.4.6 Mars Summary 76
Problems 77

5. The Major Planets 79
5.1 Jupiter 79
5.1.1 Internal Structure of Jupiter 79
5.1.2 Heat Generation in Jupiter 81
5.1.2.1 Gravitational Contraction of Jupiter 81
5.1.2.2 Separation and Settling of Helium 81
5.1.3 Atmosphere of Jupiter 81
5.1.4 Jupiter's Magnetic Field 83
5.1.5 Jupiter Summary 83
5.2 Saturn 84
5.2.1 Internal Structure of Saturn 85
5.2.2 Heat Generation in Saturn 86
5.2.3 Atmosphere of Saturn 86
5.2.4 Saturn's Magnetic Field 86
5.2.5 Saturn Summary 87
5.3 Uranus 87
5.3.1 Internal Structure of Uranus 88
5.3.2 Heat Generation in Uranus 88
5.3.3 Atmosphere of Uranus 89
5.3.4 Magnetic Field of Uranus 90
5.3.5 Uranus Summary 90
5.4 Neptune 91
5.4.1 Internal Structure of Neptune 91
5.4.2 Heat Generation in Neptune 92
5.4.3 Atmosphere of Neptune 92
5.4.4 Neptune's Magnetic Field 92
5.4.5 Neptune Summary 92
Problems 93

6. The Moon 95
6.1 Physical Characteristics of the Moon 95
6.1.1 Distance, Size and Orbit of the Moon 95
6.2 Earth–Moon Interactions 98
6.2.1 Diurnal Tides 98
6.2.2 Effects of Tides on the Earth–Moon System 99
6.3 Lunar and Solar Eclipses 100
6.3.1 Solar Eclipses 100
6.3.2 Eclipses of the Moon 101
6.4 Lunar Surface 101
6.4.1 Maria 103
6.4.2 Highlands 104
6.4.3 Breccias 105
6.4.4 Regolith: Lunar Soil 105
6.5 Interior of the Moon 106
6.5.1 Gravity Measurements 106
6.5.2 Lunar Seismicity 108
6.5.3 Interior Structure of the Moon 108
6.5.4 Heat Flow and Temperature Measurements 109
6.6 Lunar Magnetism 110
6.7 Some Indications of Lunar History 111
6.8 Moon Summary 113
Problems 114

7. Satellites and Rings 115
7.1 Types of Satellites 115
7.2 Satellites of Mars 116
7.3 Satellites of Jupiter 117
7.3.1 Io 118
7.3.2 Europa 119
7.3.3 Ganymede 120
7.3.4 Callisto 121
7.3.5 Commensurabilities of the Galilean Satellites 122
7.3.6 Smaller Satellites of Jupiter 123
7.4 Satellites of Saturn 125
7.4.1 Titan and Hyperion 125
7.4.2 Mimas, Enceladus, Tethys, Dione and Co-Orbiting Satellites 126
7.4.3 Rhea and Iapetus 128
7.4.4 Phoebe 128
7.4.5 Other Small Satellites 129
7.5 Satellites of Uranus 130
7.6 Satellites of Neptune 131
7.7 Ring Systems 132
7.7.1 Rings of Saturn 132
7.7.2 Rings of Uranus 134
7.7.3 Rings of Jupiter 135
7.7.4 Rings of Neptune 135
7.8 General Observations 136
Problems 136

8. Asteroids 137
8.1 General Characteristics 137
8.2 Types of Asteroid Orbit 140
8.3 Distribution of Asteroid Orbits: Kirkwood Gaps 141
8.4 Compositions and Possible Origins of Asteroids 142
Problems 145

9. Comets and the Kuiper Belt 147
9.1 Types of Comet Orbit 147
9.2 Physical Structure of Comets 150
9.3 Oort Cloud 154
9.3.1 Perturbations by Stars 156
9.3.2 Perturbation by Giant Molecular Clouds 156
9.3.3 Perturbation by the Galactic Tidal Field 157
9.3.4 Perturbers within the Oort Cloud 157
9.4 Kuiper Belt 157
Problems 159

10. Meteorites 161
10.1 Introduction 161
10.2 Stony Meteorites 165
10.2.1 Systematics of Chondritic Meteorites 165
10.2.2 Achondrites 169
10.3 Stony Irons 171
10.4 Iron Meteorites 172
10.5 Ages of Meteorites 175
10.6 Isotopic Anomalies in Meteorites 176
10.6.1 Oxygen in Meteorites 176
10.6.2 Magnesium in Meteorites 178
10.6.3 Neon in Meteorites 179
10.6.4 Other Isotopic Anomalies 180
Problems 180

11. Dust in the Solar System 183
11.1 Meteor Showers 183
11.2 Zodiacal Light and Gegenschein 185
11.3 Radiation Pressure and the Poynting–Robertson Effect 185
Problem 186

12. Theories of the Origin and Evolution of the Solar System 187
12.1 Coarse Structure of the Solar System 187
12.2 Distribution of Angular Momentum 188
12.3 Other Features of the Solar System 188
12.4 Laplace Nebula Theory 189
12.4.1 Objections and Difficulties 190
12.5 Jeans Tidal Theory 190
12.5.1 Objections and Difficulties 190
12.6 Solar Nebula Theory 192
12.6.1 Transfer of Angular Momentum 192

12.6.2 Solar Nebula Theory: Formation of Planets 1 193
12.6.2.1 Settling of Dust into the Mean Plane 193
12.6.2.2 Formation of Planetesimals 194
12.6.2.3 Planets and Cores from Planetesimals 194
12.6.2.4 Gaseous Envelopes 194
12.6.3 Solar Nebula Theory: Formation of Planets 2 194
12.6.4 General Comments 195
12.7 Capture Theory 196
12.7.1 Basic Scenario of the Capture Theory 196
12.7.2 Modelling the Basic Capture Theory 197
12.7.3 Evolution of Planetary Orbits 199
12.7.4 Orbital Commensurabilities 200
12.7.5 Formation of Satellites 200
12.7.6 Frequency of Planetary Systems 201
12.7.7 General Comments 201
12.8 Ideas on the Evolution of the Solar System 202
12.8.1 Precession of Elliptical Orbits 202
12.8.2 Near Interactions between Protoplanets 203
12.9 Planetary Collision 204
12.9.1 Modelling the Collision 204
12.10 Earth and Venus 206
12.11 Asteroids, Comets, Meteorites and Dwarf Planets 207
12.12 Origin of the Moon 208
12.12.1 Darwin's Fission Hypothesis 208
12.12.2 Co-Accretion of the Earth and the Moon 209
12.12.3 Capture of the Moon 209
12.12.4 Single-Impact Theory 210
12.12.5 Capture in a Collision Scenario 211
12.13 Mars and Mercury 212
12.14 Neptune, Triton, Pluto and Charon 212
12.15 Isotopic Anomalies in Meteorites 213
12.16 General Comments on a Planetary Collision 215
Problems 215

Appendix A: Electromagnetic Radiation: Detecting Atoms, Ions, Molecules and Radicals 217

Appendix B: Basic Mineralogy 221

Appendix C: Geochronology: Radioactive Dating 233

Appendix D: Virial Theorem 251

Appendix E: Jeans Critical Mass 253

Appendix F: Free-Fall Collapse 257

Appendix G: Evolution of Protostars 261

Appendix H: Equilibrium of Stars on the Main Sequence 267

Appendix I: Energy Production in Stars 273

Appendix J: Evolution of Stars away from the Main Sequence 283

Appendix K: White Dwarfs, Neutron Stars and Black Holes 291
Appendix L: Exoplanets: Planets around Other Stars 297
Appendix M: Solar System Studies to the Beginning of the Seventeenth Century 309
Appendix N: Newton, Kepler's Laws and Solar-System Dynamics 321
Appendix O: Formation of Commensurate Planetary Orbits 335
Appendix P: Atmosphere of the Earth 339
Appendix Q: Physics of Planetary Interiors 355
Appendix R: Transfer of Heat 369
Appendix S: Seismology: The Interior of the Earth 377
Appendix T: Moments of Inertia 389
Appendix U: Gravitational Field of a Distorted Planet 395
Appendix V: Precession of the Earth's Spin Axis 399
Appendix W: Intrinsic Planetary Magnetism 403
Appendix X: Magnetic Interactions between Planet and Star 423
Appendix Y: Planetary Albedos 441
Appendix Z: Physics of Tides 445
Appendix AA: Darwin's Theory of Lunar Origin 455
Appendix AB: Roche Limit and Satellite Disruption 457
Appendix AC: Tidal Heating of Io 465
Appendix AD: Ram Pressure of a Gas Stream 469
Appendix AE: Trojan Asteroids 471
Appendix AF: Heating by Accretion 475
Appendix AG: Perturbations of the Oort Cloud 481
Appendix AH: Radiation Pressure and the Poynting–Robertson Effect 491
Appendix AI: Analyses Associated with the Jeans' Tidal Theory 495
Appendix AJ: Viscous-Disk Mechanism for the Transfer of Angular Momentum 499
Appendix AK: Magnetic Braking of the Spinning Sun 501
Appendix AL: Safronov Theory of Planet Formation 507
Appendix AM: Eddington Accretion Mechanism 513
Appendix AN: Life on Earth: And Elsewhere? 515
Appendix AO: Global Warming 529
Appendix AP: Migration of Planetary Orbits 537
Appendix AQ: Interactions in an Embedded Cluster 547
