<i>Foreword</i>	xi
<i>Preface</i>	xiii
1 Theoretical Study of Superconductivity in 4-Angstrom Carbon Nanotube Arrays	1
<i>Ting Zhang, Mingyuan Sun, Zhe Wang, Wu Shi, Rolf Lortz, Zikang Tang, Ning Wang, and Ping Sheng</i>	
1.1 Introduction	2
1.2 The CNT@AFI System	2
1.3 RG Treatment of Ultrathin (5,0) CNT Arrays	6
1.3.1 Linearization of (5,0) CNT Band and Definition of Coupling Constants	7
1.3.2 RG Treatment of a Single (5,0) Nanotube	10
1.3.3 Scaling Results for a Single (5,0) CNT	14
1.3.4 Scaling Results for a Thin Array of (5,0)	16
1.4 Appearance of Thermal Fluctuation-Induced Resistance in 1D Superconductors	19
1.5 Characteristics of the Dimensional Crossover Transition	23
1.6 Concluding Remarks	33
2 The Search for Superconductivity at van Hove Singularities in Carbon Nanotubes	37
<i>Yanfei Yang, Georgy Fedorov, Jian Zhang, Alexander Tselev, Serhii Shafranjuk, and Paola Barbara</i>	
2.1 Introduction	38
2.2 Superconductivity in Carbon Nanotubes: Experimental Challenges	39
2.3 Andreev Reflection and Point Contact Spectroscopy	40
2.4 Proximity Effect in Carbon-Nanotube/Superconductor Junctions	42

2.5	Carbon Nanotubes with Normal Electrodes: Zero-Bias Conductance Peaks as Signatures of Intrinsic Superconductivity	46
2.6	Gate Voltage as a Probe of the Density of States and Its VHS	50
2.7	Summary	55
3	Superconductivity in Carbon Nanotubes: One-Dimensional Electron Correlation	59
	<i>Junji Haruyama</i>	
3.1	Introduction	59
3.2	Superconductivity in MWNTs: Interplay of Superconductive Phase with TLL	60
3.2.1	Introduction	60
3.2.2	Superconductivity in Entirely End-Bonded MWNTs	62
3.2.3	Correlation of Superconductive Phase with TLL States	65
3.3	Superconductivity in Thin Films of Boron-Doped CNTs: Fermi-Level Alignment by Boron Doping with Van Hove Singularity	70
3.3.1	Introduction	70
3.3.2	Characterization of Substitutional Boron Doping into SWNTs	72
3.3.3	Magnetization Measurements and Identification of Meissner Effect	73
3.3.4	Correlation of Doping Concentration with Meissner Effect: Fermi-Level Tuning to van Hove Singularity by Born Doping	77
3.4	Pressure-Induced Superconductivity at 19 K in Boron-Doped Buckypapers	79
3.4.1	Introduction	79
3.4.2	Sample Preparation	80
3.4.3	Pressure-Dependent Magnetization Measurements	82
3.4.4	Pressure-Dependent Raman Spectroscopy	86
3.5	Summary and Application: 1D Electron Correlation and Quantum Spin Computation	88

4	Electronic Structure, Carrier Doping, and Superconductivity in Nanostructured Carbon Materials	95
	<i>Takashi Koretsune and Susumu Saito</i>	
4.1	Alkali-Doped Fullerene Compounds	96
4.1.1	Fcc A_3C_{60}	96
4.1.2	A15 Cs_3C_{60}	98
4.2	Carbon Nanotube	98
4.2.1	Electronic Structures of Impurity-Doped CNTs	99
4.2.2	Impurity Level	100
4.2.3	Density of States at the Fermi Level	101
4.2.4	Three-Dimensionality	102
4.2.4.1	Bundled CNT	103
4.2.4.2	DWCNT	104
4.3	Summary	106
5	Superconductivity in Carbon Nanotubes: Limitations, Competition, and Implementation Toward Higher T_c	109
	<i>Jian He, Keqin Yang, Jason Reppert, Malcolm Skove, and Apparao M. Rao</i>	
5.1	What Makes Superconductivity Emerge?	109
5.2	Can T_c Continue to Increase, and if so, How?	112
5.3	Carbon Nanotubes: Tubular Morphology and Reduced Dimensionality	114
5.3.1	From Graphene to Nanotube	114
5.3.2	Tubular Topology and Dimensionality Effect at Large	116
5.3.3	A T - U - S - ω Description of Phase Diagram	117
5.3.4	Electronic Transport Properties of Carbon Nanotubes	120
5.3.4.1	Ballistic transport regime	120
5.3.4.2	Classical transport regime	122
5.3.4.3	Basics and extension of TLL description	125
5.4	Superconductivity in Carbon Nanotubes	125
5.4.1	Superconductivity in Pristine Carbon Nanotubes	127
5.4.1.1	Inter-shell coupling, inter-tube coupling, and disorder	130
5.4.2	Superconductivity in Doped Carbon Nanotubes	137

5.5	A List of Outstanding Issues	140
5.5.1	Higher T_c in View of $T \sim S \sim U$	140
5.5.2	Signatures of Electron-Phonon Coupling	143
5.5.2.1	Thermopower behavior	143
5.5.2.2	Raman spectroscopy	144
5.5.3	The Spin Degree of Freedom	145
5.5.4	Mechanism of Superconductivity in Carbon Nanotubes	147
5.5.5	Ferromagnetic Catalysts and Doping	148
5.6	Perspective Remarks	149
6	Enhancement of Superconductivity and Lattice Instability in Graphite-Intercalated CaC_6	159
	<i>Andrea Gauzzi, Nedjma Bendiab, Matteo d'Astuto, Bernard Canny, Matteo Calandra, Francesco Mauri, Geneviève Loupiau, Shinya Takashima, Hidenori Takagi, Nao Takeshita, Chieko Terakura, Nicolas Emery, Claire Hérold, Philippe Lagrange, Michael Hanfland, and Mohamed Mezouar</i>	
6.1	Introduction	159
6.1.1	Crystal and Electronic Structures of Graphite-Intercalated Compounds	161
6.1.2	Transport and Superconducting Properties of CaC_6 at Ambient Pressure	165
6.1.3	Effects of High Pressure on the Transport and Superconducting Properties of Bulk CaC_6	167
6.1.4	High-Pressure X-Ray Diffraction Study of the Structural Instability	168
6.1.4.1	High-pressure X-ray diffraction experiment	169
6.1.4.2	Experimental and theoretical equation of state	170
6.1.4.3	Evidence of pressure-induced order-disorder phase transition	171
6.2	Conclusions	173
7	High-Resolution ARPES Study of Superconducting C_6Ca	179
	<i>Katsuaki Sugawara and Takashi Takahashi</i>	
7.1	Introduction	180
7.2	Photoemission Spectroscopy	181

7.3	Fabrication of C_6Ca Single Crystal	184
7.4	Electronic Structure of C_6Ca	184
7.5	Superconducting Gap and Its Symmetry in C_6Ca	187
7.6	Electron–Phonon Interaction in C_6Ca	188
7.7	Summary	189
8	Theory for Reliable First-Principles Prediction of the Superconducting Transition Temperature	193
	<i>Yasutami Takada</i>	
8.1	Introduction	193
8.2	SCDFT: Density Functional Theory for Superconductors	197
8.2.1	Hohenberg–Kohn–Sham Theorem	197
8.2.2	Gap Equation in SCDFT	198
8.2.3	Application and Discussion	200
8.3	G_0W_0 Approximation with Application to Graphite Intercalation Compounds	202
8.3.1	Pairing Interaction in the Weak-Coupling Region	202
8.3.2	Superconductivity in Polar Semiconductors	205
8.3.3	Graphite Intercalation Compounds	207
8.3.3.1	Historical survey	207
8.3.3.2	Standard model for intercalated graphite superconductors	211
8.3.3.3	Key physical parameters to control superconductivity	213
8.3.3.4	Prediction of optimum T_c	214
8.4	Strong-Coupling Approach with Application to Fullerides	215
8.4.1	Coherence Length	215
8.4.2	Pairing Interaction in the Strong-Coupling Region	216
8.4.3	Interpolation Formula for the Pairing-Interaction Functional	219
8.4.4	Alkali-Doped Fullerides	220
8.4.4.1	Aims of this subsection	220
8.4.4.2	The Hubbard–Holstein model	222
8.4.4.3	Prospect for room-temperature superconductors	225
8.5	Conclusion and Discussion	226

9 Surface Superconductivity in Rhombohedral Graphite	231
<i>Nikolai B. Kopnin and Tero T. Heikkilä</i>	
9.1 Introduction	232
9.2 Electron Dispersion in Rhombohedral Graphite	236
9.2.1 Low-Energy Spectrum in the Normal State	240
9.3 Bogoliubov–de Gennes Equations for the Superconducting State	245
9.4 Surface Superconductivity	249
9.4.1 Flat Band	250
9.4.2 “Flat-Band” Surface Superconductivity in a Finite Array	251
9.4.3 BCS-Like Surface Superconductivity for a Quadratic Spectrum	252
9.4.4 Supercurrent	255
9.4.5 Effect of Fluctuations	257
9.4.6 Twinning Boundary Superconductivity	258
9.5 Summary	260
10 Superconductivity and Local Structure in Boron-Doped Diamond	265
<i>Hidekazu Mukuda</i>	
10.1 Introduction	266
10.2 Experimental	268
10.3 Results and Discussion	269
10.3.1 ^{11}B -NMR Spectrum Analysis	269
10.3.2 T_c vs. Effective Carrier Density	272
10.3.3 Local Structure of Low Symmetric B(2) Site	274
10.3.4 How do we obtain the higher T_c ?	277
10.4 Summary	278
11 Superconductivity in Boron-Doped SiC	281
<i>Takahiro Muranaka</i>	
11.1 Introduction	281
11.2 Characterization	283
11.3 Magnetic Response	284
11.4 Specific Heat Measurement	285
11.5 Electrical Resistivity and H - T Phase Diagram	287
11.6 Discussion	291
11.7 Conclusion	292
<i>Index</i>	295
