<i>Preface to the First Edition</i>	<i>xi</i>
CHAPTER 1. Elements of Ordinary Differential Initial Value Problem Approximation	1
1.1 Introduction	1
1.2 Initial Value Problems	2
1.3 Difference Equations	3
1.4 Numerical Methods	7
1.5 Stability Analysis	12
Interval of absolute stability	
1.6 Convergence Analysis	17
Bibliographical note	
Problems	
CHAPTER 2. Singlestep Methods	27
2.1 Introduction	27
2.2 Taylor Series Method	28
Convergence	
2.3 Runge-Kutta Methods	31
Second order methods	
Third order methods	
Fourth order methods	
High order Runge-Kutta methods	
Results from computations for Runge-Kutta methods	
Convergence	
Approximation of truncation error	
2.4 Extrapolation Method	46
Euler extrapolation method	
2.5 Stability Analysis	50
Fourth order Runge-Kutta method	
Euler extrapolation method	

2.6	Implicit Runge-Kutta Methods	55
	Second order method	
	Third order method	
	Fourth order method	
	High order implicit Runge-Kutta methods	
2.7	Obrechhoff Methods	61
	Second order methods	
	Third order methods	
	Fourth order method	
2.8	Systems of Differential Equations	67
	Taylor series method	
	Runge-Kutta methods	
	Stability analysis	
	Stiff system of differential equations	
2.9	Higher Order Differential Equations	73
	Runge-Kutta methods	
	Stability analysis	
2.10	Adaptive Numerical Methods	81
	Runge-Kutta-Treanor method	
	Runge-Kutta-Liniger-Willoughby method	
	Runge-Kutta-Nystrom-Treanor method	
	Bibliographical note	
	Problems	
CHAPTER 3. Multistep Methods		93
3.1	Introduction	93
3.2	Explicit Multistep Methods	94
	Adams-Bashforth formulas ($j=0$)	
	Nystrom formulas ($j=1$)	
	Formulas for, $j=0, 1, 3, 5$	
	Results from computation for predictor methods	
3.3	Implicit Multistep Methods	102
	Adams-Moulton formulas ($j=0$)	
	Milne-Simpson formulas ($j=1$)	
3.4	Multistep Methods based on Differentiation	105
3.5	General Linear Multistep Methods	106
	Determination of a_i and b_i	
	Estimate of truncation error	
	Stability and convergence	
	Other stability results	
	Propagated error estimates	
3.6	Predictor-Corrector Methods	126
	Use of implicit multistep methods	
	$P(EC)^mE$ scheme	
	Results from computation for Adams $P-C$ methods	
	Modified predictor-corrector methods	
3.7	Hybrid Methods	140
	One step hybrid methods	
	Two step hybrid methods	
	Implementation of hybrid predictor-corrector methods	

- 3.8 Higher Order Differential Equations 147
 - Hybrid methods
 - Obrechhoff methods
 - Adaptive numerical methods
 - Results from computation
- 3.9 Non-uniform Step Methods 160
 - Adams-Bashforth methods
 - Adams-Moulton methods
 - Results from computation
 - Bibliographical note
 - Problems

CHAPTER 4. Difference Methods for Boundary Value Problems in Ordinary Differential Equations

173

- 4.1 Introduction 173
- 4.2 Approximate Methods 174
 - Shooting methods
 - Difference methods
 - Difference approximation to derivatives
- 4.3 Nonlinear Boundary Value Problem
 $y'' = f(x, y)$ 180
 - Difference scheme based on quadrature formulas
 - Second order linear boundary value problems
 - Solution of tridiagonal system
 - Mixed boundary conditions
 - Boundary condition at infinity
 - High order methods
- 4.4 Nonlinear Boundary Value Problem
 $y'' = f(x, y, y')$ 200
 - Difference schemes
 - Compact implicit difference schemes
 - Difference schemes based on cubic spline function
 - Second order linear differential equation with significant first derivative
- 4.5 Convergence of Difference Schemes 213
- 4.6 Nonlinear Boundary Value Problem
 $y^{(iv)} = f(x, y)$ 218
 - Difference schemes
 - Fourth order linear boundary value problem
 - Solution of five-band system
- 4.7 Linear Eigenvalue Problems 225
 - Eigenvalues and eigenvectors
 - The iteration method
 - Convergence analysis
- 4.8 Results from Computation 232
- 4.9 Nonuniform Grid Methods for the Second Order Boundary Value Problems 235
 - Nonlinear boundary value problems $y'' = f(x, y)$
 - Nonlinear boundary value problems $y'' = f(x, y, y')$

Results from computation
Bibliographical note
Problems

CHAPTER 5. Difference Methods for Parabolic Partial Differential Equations	251
5.1 Introduction	251
5.2 Difference Methods	254
5.3 Difference Schemes for Equations in One Space Dimension with Constant Coefficients	258
Two level explicit difference schemes	
Multilevel explicit difference schemes	
Explicit difference schemes for the diffusion convection equation	
Two level implicit difference schemes	
Multilevel implicit difference schemes	
Implicit difference schemes for the diffusion convection equation	
5.4 Implementation of Difference Schemes	277
The initial value problem	
The initial Dirichlet boundary value problem	
The initial mixed boundary value problem	
Results from computation	
5.5 Stability Analysis and Convergence of Difference Schemes	288
Matrix stability analysis	
Convergence of difference schemes	
5.6 Difference Schemes for Equations in Two Space Variables with Constant Coefficients	296
Explicit difference schemes	
Implicit difference schemes	
Alternating direction implicit (ADI) methods	
5.7 ADI Methods for Equations in Two Space Variables with a Mixed Derivative	309
Two level implicit difference schemes	
Three level methods	
Results from computation	
5.8 ADI Methods for Equations in Three Space Variables with Constant Coefficients	316
5.9 Difference Schemes for Equations with Variable Coefficients	321
One space dimension	
Two space dimensions	
Three space dimensions	
Stability analysis	
ADI formulas	
Results from computation	
5.10 Difference Schemes for Fourth Order Equations	335
Direct procedure	

	The Richtmyer procedure	
	Results from computation	
5.11	Nonlinear Parabolic Equations	349
	Iteration methods	
5.12	Difference Schemes for Equations with Cylindrical Symmetry	359
	Implicit two level schemes	
	Approximation at the boundary	
	Two space variables	
	Results from computation	
	Bibliographical note	
	Problems	
CHAPTER 6.	Difference Methods for Hyperbolic Partial Differential Equations	380
6.1	Introduction	380
6.2	Difference Schemes for Hyperbolic Equations in One Space Variable with Constant Coefficients	380
	Explicit difference schemes	
	Implicit difference schemes	
	Results from computation	
6.3	Difference Schemes for Equations in Two Space Variables with Constant Coefficients	389
	Explicit difference schemes	
	Implicit difference schemes	
	ADI methods	
	Results from computation	
6.4	Difference Schemes for Equations in Three Space Variables with Constant Coefficients	398
6.5	Difference Schemes for Equations with Variable Coefficients	400
	One space dimension	
	Two space dimensions	
	Results from computation	
6.6	Locally One Dimensional (LOD) Methods	405
	Two space dimensions	
	Three space dimensions	
	Results from computation	
6.7	Difference Schemes for System of Equations in One Space Variable	407
	First order hyperbolic scalar equation	
	System of equations	
	Systems in conservation form	
	Stability analysis	
6.8	Implementation of Difference Schemes	419
	Initial boundary value problem	
	Results from computation	

6.9	Difference Schemes for System of Equations in Two Space Variables	427	
	Stability analysis		
	Systems of conservation laws in two space dimensions		
	Results from computation		
	Bibliographical note		
	Problems		
CHAPTER 7. Difference Methods for Elliptic Partial Differential Equations			448
7.1	Introduction	448	
7.2	Difference Schemes	448	
	Difference approximation to ∇^2		
	Difference approximation to ∇^4		
7.3	Dirichlet Problem	458	
7.4	Iterative Methods	461	
	Jacobi method		
	Gauss-Seidel method		
	Successive over-relaxation (SOR) method		
	Richardson method		
	Results from computation		
7.5	Alternating Direction Method	476	
7.6	Neumann Problem	484	
	Derivative condition at the curved boundary		
7.7	Third Boundary Value Problem	487	
7.8	Diffusion Convection Equation	489	
7.9	Axially Symmetric Equation	493	
7.10	Biharmonic Equation	496	
	Bibliographical note		
	Problems		
CHAPTER 8. Finite Element Methods			513
8.1	Introduction	513	
8.2	Weighted Residual Methods	513	
	Least square method		
	Partition method		
	Galerkin method		
	Moment method		
	Collocation method		
8.3	Variational Methods	522	
	Ritz method		
8.4	Finite Elements	528	
	Line segment element		
	Triangular element		
	Rectangular element		
	Quadrilateral element		
	Tetrahedron element		
	Hexahedron element		

	Curved boundary element	
	Numerical integration over finite elements	
8.5	Finite Element Methods	559
	Ritz finite element method	
	Least square finite element method	
	Galerkin finite element method	
	Convergence analysis	
8.6	Boundary Value Problems in Ordinary Differential	
	Equations	563
	Assembly of element equations	
	Mixed boundary conditions	
	Galerkin method	
8.7	Boundary Value Problem in Partial Differential	
	Equations	575
	Assembly of element equations	
	Mixed boundary conditions	
	Boundary points	
	Galerkin method	
8.8	Nonlinear Differential Equations	606
8.9	Initial Value Problems in Ordinary Differential	
	Equations	609
	First order initial value problems	
	Second order initial value problems	
8.10	Initial Boundary Value Problems	615
	Parabolic equation	
	First order hyperbolic equation	
	Second order hyperbolic equation	
	Bibliographical note	
	Problems	
	<i>Bibliography</i>	645
	<i>Answers and Hints to the Problems</i>	660
	<i>Index</i>	695
