Preface	ix
1 Introduction	1
1.1 Arrivals in time	1
1.2 Reliability	2
1.3 Safety assessment	5
1.4 Random stress and strength	6
Notes on the literature	7
Problems	8
2 Point processes	9
2.1 The probabilistic context	9
2.2 Two methods of representation	12
2.3 Parameters of point processes	13
2.4 Transformation to a process with constant arrival rate	16
2.5 Time between arrivals	17
Notes on the literature	19
Problems	19
3 Homogeneous Poisson processes	21
3.1 Definition	21
3.2 Characterization	22
3.3 Time between arrivals for the hP process	26
3.4 Relations to the uniform distribution	28
3.5 A process with simultaneous arrivals	29
Notes on the literature	30
Problems	30
4 Application of point processes to a theory of safety assessment	32
4.1 The Reactor Safety Study	32
4.2 The annual probability of a reactor accident	35
4.3 A stochastic consequence model	36

vi Contents

4.4	A concept of rare events	39
4.5	Common mode failures	43
4.6	Conclusion	44
	Notes on the literature	45
	Problems	45
5	Renewal processes	47
5.1	Probabilistic theory	47
5.2	The renewal process cannot model equipment wearout	49
	Notes on the literature	51
	Problems	51
6	Poisson processes	53
6.1	The Poisson model	53
6.2	Characterization of regular Poisson processes	58
6.3	Time between arrivals for Poisson processes	63
6.4	Further observations on software error detection	65
	Notes on the literature	65
	Problems	66
7	Superimposed processes	68
	Notes on the literature	71
	Problems	71
8	Markov point processes	72
8.1	Theory	72
8.2	The Poisson process	75
8.3	Facilitation and hindrance	75
	Notes on the literature	77
	Problems	77
9	Applications of Markov point processes	79
9.1	Egg-laying dispersal of the bean weevil	79
9.2	Application of facilitation – hindrance to the spatial distribution of benthic invertebrates	81
9.3	The Luria–Delbrück model	83
9.4	Chance placement of balls in cells	83
9.5	A model for multiple vehicle automobile accidents	86
9.6	Engels’ model	90
	Notes on the literature	91
	Problems	92

10 The order statistics process	93
10.1 The sampling of lifetimes	93
10.2 Derivation from the Poisson process	95
10.3 A Poisson model of equipment wearout	97
Notes on the literature	98
Problems	98
11 Competing risk theory	100
11.1 Markov chain model	100
11.2 Classical competing risks	102
11.3 Competing risk presentation of reactor safety studies	103
11.4 Delayed fatalities	107
11.5 Proportional hazard rates	109
Notes on the literature	110
Problems	111
Further reading	113
Appendix 1 Probability background	115
A1.1 Probability distributions	115
A1.2 Expectation	117
A1.3 Transformation of variables	119
A1.4 The distribution of order statistics	120
A1.5 Conditional probability	121
A1.6 Operational methods in probability	122
A1.7 Convergence concepts and results in the theory of probability	125
Notes on the literature	127
Appendix 2 Technical topics	129
A2.1 Existence of point process parameters	129
A2.2 No simultaneous arrivals	130
Solutions to a few of the problems	133
References	135
Author index	141
Subject index	143
