
CONTENTS

	Preface	xiii
	PART ONE Preparation for Analysis	1
1	What is Multivariate Analysis?	2
	1.1 How is Multivariate Analysis Defined?	2
	1.2 Examples of Studies in Which Multivariate Analysis Is Useful	2
	1.3 Multivariate Analyses Discussed in this Book	5
	1.4 Organization and Content of the Book	9
	Bibliography	10
2	Characterizing Data for Future Analyses	12
	2.1 What Will You Learn from this Chapter?	12
	2.2 Defining Statistical Variables	12
	2.3 How Variables are Classified: Stevens's Classification System	13
	2.4 How Variables are Used in Data Analysis	17
	2.5 Examples of Classifying Variables	18
	Summary	19
	Bibliography	19
	Problems	19
3	Preparing for Data Analysis	21
	3.1 What Will You Learn from this Chapter?	21
	3.2 Statistical Package Programs	21
	3.3 Data Entry and Coding	25

3.4	Data Example: Los Angeles Depression Study	30
3.5	Preliminary Data Screening	33
	Summary	44
	Bibliography	45
	Problems	46
4	Data Screening and Data Transformation	48
4.1	What Will You Learn from this Chapter?	48
4.2	Redefinition of Data	49
4.3	Common Transformations	51
4.4	Assessing the Need for and Selecting a Transformation	56
4.5	Assessing Independence	62
	Summary	64
	Bibliography	65
	Problems	66
5	Selecting Appropriate Analyses	68
5.1	What Will You Learn from this Chapter?	68
5.2	Why Selection of Analyses is Often Difficult	68
5.3	Appropriate Statistical Measures Under Stevens's Classification	69
5.4	Appropriate Multivariate Analyses Under Stevens's Classification	73
	Summary	76
	Bibliography	76
	Problems	77
	PART TWO Applied Regression Analysis	79
6	Simple Linear Regression and Correlation: Examining Relationships Between Two Variables	80
6.1	What Will You Learn from this Chapter?	80
6.2	When are Regression and Correlation Used?	81
6.3	Data Example	82
6.4	Description of Methods of Regression: Fixed- X Case	85

6.5	Description of Methods of Regression and Correlation: Variable- X Case	90
6.6	Interpretation of Results: Fixed- X Case	91
6.7	Interpretation of Results: Variable- X Case	93
6.8	Additional Statistics Found in Computer Outputs	98
6.9	Other Options in Computer Programs	103
6.10	Special Applications of Regression	104
6.11	Robustness and Transformations for Regression Analysis	107
6.12	Computational Aids for Hand Calculations	111
6.13	Discussion of Computer Programs	112
	Summary	115
	Bibliography	115
	Problems	117
7	<i>Multiple Regression and Correlation: Examining Linear Relations Between One Variable and Many Variables</i>	120
7.1	What Will You Learn from this Chapter?	120
7.2	When are Multiple Regression and Correlation Used?	121
7.3	Data Example	122
7.4	Description of Techniques: Fixed- X Case	125
7.5	Description of Techniques: Variable- X Case	128
7.6	How to Interpret the Results: Fixed- X Case	135
7.7	How to Interpret the Results: Variable- X Case	139
7.8	Residual Analysis and Transformations	142
7.9	Other Options in Computer Programs	146
7.10	Discussion of Computer Programs	151
	Summary	158
	Bibliography	159
	Problems	160
8	<i>Variable Selection in Regression Analysis</i>	164
8.1	What Will You Learn from this Chapter?	164
8.2	When are Variable Selection Methods Used?	165
8.3	Data Example	165
8.4	Criteria for Variable Selection	169

8.5	A General F Test	172
8.6	Stepwise Regression	173
8.7	Subset Regression	180
8.8	Discussion of Computer Programs	185
8.9	Discussion and Extensions	189
	Summary	191
	Bibliography	192
	Problems	193
9	Nonlinear Regression Analysis	196
9.1	What Will You Learn from this Chapter?	196
9.2	When is Nonlinear Regression Used?	196
9.3	Example of a Nonlinear Regression Equation	199
9.4	Description of Methods	201
9.5	Discussion of Computer Programs	205
	Summary	213
	Bibliography	214
	Problems	215
10	Recent Advances in Regression Analysis	218
10.1	What Will You Learn from this Chapter?	218
10.2	Missing Values	219
10.3	Dummy Variables	221
10.4	Constraints on Parameters	228
10.5	Ridge Regression	230
10.6	Path Analysis	235
	Summary	237
	Bibliography	238
	Problems	240
	PART THREE Multivariate Analysis	245
11	Discriminant Analysis: Classifying Individuals into Populations	246
11.1	What Will You Learn from this Chapter?	246
11.2	When is Discriminant Analysis Used?	247
11.3	Data Example	248

11.4	Basic Concepts of Classification	249
11.5	Theoretical Background	257
11.6	Interpretation	258
11.7	Adjusting the Value of the Dividing Point	263
11.8	How Good is the Discriminant Function?	266
11.9	Testing for the Contributions of Classification Variables	269
11.10	Variable Selection	270
11.11	Classification into More Than Two Groups	271
11.12	Discussion of Computer Programs	275
	Summary	283
	Bibliography	284
	Problems	284
12	<i>Logistic Regression: Another Method of Classification</i>	287
12.1	What Will You Learn from this Chapter?	287
12.2	When is Logistic Regression Used?	287
12.3	Data Example	288
12.4	Basic Concepts of Logistic Regression	290
12.5	Interpretation: Continuous Variables	292
12.6	Interpretation: Categorical Variables	295
12.7	How Good is the Equation?	298
12.8	Applications of Logistic Regression	300
12.9	Discussion of Computer Programs	303
	Summary	306
	Bibliography	306
	Problems	307
13	<i>Principal Components Analysis: Restructuring Data</i>	309
13.1	What Will You Learn from this Chapter?	309
13.2	When is Principal Components Analysis Used?	309
13.3	Data Example	311
13.4	Basic Concepts of Principal Components Analysis	311
13.5	Interpretation	316
13.6	Discussion of Computer Programs	325
	Summary	328
	Bibliography	328
	Problems	329

14	Factor Analysis: Further Understanding of Underlying Data Structure	330
14.1	What Will You Learn from this Chapter?	330
14.2	When is Factor Analysis Used?	330
14.3	Data Example	331
14.4	Basic Concepts of Factor Analysis	332
14.5	Initial Factor Extraction: Principal Components Analysis	335
14.6	Initial Factor Extraction: Iterated Principal Components	339
14.7	Factor Rotations	343
14.8	Assigning Factor Scores to Individuals	350
14.9	An Application of Factor Analysis to the Depression Data	351
14.10	Discussion of Computer Programs	353
	Summary	359
	Bibliography	360
	Problems	360
15	Canonical Correlation Analysis: Examining Linear Relationships Between Two Sets of Variables	361
15.1	What Will You Learn from this Chapter?	361
15.2	When is Canonical Correlation Analysis Used?	361
15.3	Data Example	363
15.4	Basic Concepts of Canonical Correlation	364
15.5	Other Topics Related to Canonical Correlation	369
15.6	Discussion of Computer Programs	373
	Summary	377
	Bibliography	377
	Problems	378
16	Cluster Analysis: Empirical Grouping of Individuals	379
16.1	What Will You Learn from this Chapter?	379
16.2	When is Cluster Analysis Used?	379
16.3	Data Examples	381
16.4	Basic Concepts: Initial Analyses and Distance Measures	382
16.5	Analytical Clustering Techniques	390

16.6 Cluster Analysis for Financial Data Set	397
16.7 Discussion of Computer Programs	404
Summary	409
Bibliography	409
Problems	410
Appendix A Statistical Tables	412
Table A.1 Cumulative Normal Distribution	412
Table A.2 Percentiles of the Student's t Distribution	415
Table A.3 Percentiles of the Chi-square Distribution	416
Table A.4 Percentiles of the F Distribution	419
Appendix B Lung Function Data	426
Table B.1 Code Book for Lung Function Data Set	427
Table B.2 Lung Function Data Set	429
Bibliography	435
Combined Bibliography	436
Index	451
