

TABLE OF CONTENTS

I. MATERIALS PROPERTIES AND CATHODE CONSTRUCTION	1
INTRODUCTION	1
THE CARBON LINING	4
Anthracite	5
Synthetic graphite	5
Binders	7
Ramming pastes	8
Cathode blocks	11
Choice of bottom block materials	20
Sidewall blocks	21
Ceramic sidewall materials	23
Carbon glues	25
REFRACTORIES AND INSULATION	29
Alumina	34
Firebricks	35
Composite or sandwich insulation	36
Chemical composition of refractory and insulation materials	36
DIFFUSION AND PENETRATION BARRIERS	39
Steel plates	40
Graphite foil	41
Glass	41
Bricks and tiles	41
Monolithic castables	43
Dry barrier materials	45
STEEL SHELLS AND SUPPORTS	46
INSTALLATION	48
Refractories and insulation	49
Collector bar installation	50
Bottom block installation	54
Sidewall	57
Carbonaceous rammed parts	59
CATHODE MODEL COMPUTATIONS	63
INERT AND WETTABLE CATHODES	66
REFERENCES	71
II. START AND OPERATION	74
PREHEATING AND START-UP	74
Preheating methods	75
Ramming paste	76
Anode bake-out	77
Resistive preheating	77

Liquid metal	84
Flame preheating	88
Electrical panels	93
Liquid bath (cold start)	93
Conclusions concerning preheat methods	93
Displacements of lining materials	94
GENERAL START-UP FEATURES	96
EARLY OPERATION	101
NORMAL OPERATION	103
Temperature	104
Ledge formation	107
Potholes and cracks	108
POTLIFE PREDICTION	108
REFERENCES	114
III. CHEMICAL REACTIONS	115
SURFACE REACTIONS OF THE CATHODE LINING	115
Oxidation of sidelining	115
Formation of aluminium carbide	115
Combined mechanical and chemical erosion	125
CHEMICAL REACTIONS WITHIN THE CARBON LINING	127
Sodium and melt penetration	127
Reaction thermodynamics	132
Experimental verification of the penetration/reaction model	136
NaCN formation	140
REACTIONS WITH THE COLLECTOR BAR	140
REACTIONS IN REFRACTORIES AND INSULATION	140
Reactions with bath	140
Reaction with aluminium	147
Reactions in ceramic sidewall materials	148
REFERENCES	149
IV. PHYSICAL CHANGES DURING CELL OPERATION	151
THERMAL EXPANSION AND SHRINKAGE	151
Cathode blocks	151
Ramming paste	152
Collector bar and steel shell	156
Combined thermal dilations	157
Refractories and insulation	159
ELECTRICAL PROPERTIES	161
Electrical properties of virgin lining materials	161
Changes of electrical properties over time	165
THERMAL CONDUCTIVITY	180
SODIUM EXPANSION	184

CATHODE HEAVING	191
Vertical expansion gradients	191
Salt crystallization	193
Material conversion	194
Movement restraints	195
MECHANICAL STRENGTH	198
REFERENCES	202
 V. CHARACTERIZATION OF CATHODE MATERIALS	204
INTRODUCTION	204
STANDARD CHARACTERIZATION OF CARBONACEOUS	204
Survey of standard test methods	205
Sampling	207
Apparent density	209
Open porosity	210
Pycnometric density	210
Total porosity	211
Electrical resistivity	211
Thermal conductivity	212
Thermal expansion	213
Mechanical properties and geometry	214
Compressive strength	214
Tensile strength	215
Bending strength	216
Young's modulus	218
Ash content	220
Green apparent density	220
Binder content	220
Granulometry	221
STANDARD TESTS FOR REFRACTORIES AND INSULATION	222
Pyrometric cone equivalent (PCE)	223
Thermal conductivity	223
Load testing at elevated temperatures	226
Modulus of rupture (MOR) at elevated temperatures	226
Mineralogical identification	227
Chemical analysis	227
NON-STANDARD CHARACTERIZATION	227
Thermal expansion and shrinkage	228
High temperature electrical resistance	228
Thermal conductivity at elevated temperatures	232
Thermal shock	233
Fracture mechanics	236
Crack detection	238
Abrasion resistance of carbon during electrolysis	238

Aluminium carbide formation	240
Oxidation resistance of carbon	241
Expansion of carbon due to sodium penetration	241
Rate of sodium penetration in carbon	243
Chemical resistance of carbon towards sodium	243
Characterization of graphitization by X-ray diffraction	246
Characterization of graphitization by intercalation	248
Microscopy	250
High temperature strength testing	255
Compaction characteristics of ramming paste	257
Density control during installation	260
Nuclear magnetic resonance (NMR)	262
Baking loss	264
Chemical resistance of refractory and insulation materials	264
Fluoride vapour test of refractory and insulation materials	266
OVERVIEWS	268
Test methods	268
Standard (Blocks)	268
Inspection of blocks	271
Non-standard (Blocks)	271
Ramming paste	273
Selected properties for cathode materials	273
LIST OF SYMBOLS	277
REFERENCES	279

VI. CATHODE FAILURES	282
INTRODUCTION	282
CATHODE AUTOPSIES	283
UNEVEN HEATING AND THERMAL SHOCK	287
STRATIFICATION OF THE RAMMED PARTS	290
SHRINKAGE OF THE RAMMING PASTE	294
COLLECTOR BAR INDUCED FAILURES	297
BLOCK - POT SHELL INTERACTIONS	308
SHELL REUSE	314
TRANSIENT HIGH TEMPERATURES	315
METAL PENETRATION INTO THE REFRACTORY	316
OVERINSULATION OF CATHODES	324
SODIUM INDUCED EXFOLIATION	329
AIR OXIDATION	334
SIDEWALL EROSION	337
BOTTOM EROSION	340
POT HOLE FORMATION	344
ALUMINOTHERMIC REACTIONS	347
TEMPORARY SHUTDOWN AND POT RESTART	355

POT REPAIR	359
REFERENCES	361
VII. SPENT POTLINING	362
SPENT POTLINING MATERIAL	362
Background	363
Handling of SPL	366
Watering reactions	367
TREATMENT OVERVIEW	367
DISPOSAL, RECOVERY OR RECYCLING TECHNIQUES	368
Combustion for power-generating purposes	368
Slag and metal additives in iron- and steel-industry	369
Fuel and mineral supplement in cement manufacture	370
Conversion to inert landfill materials	372
Red brick ceramic products	383
Fluoride recovery from leaching processes	383
Pyrohydrolysis	385
Pyrosulpholysis	388
Silicopyrohydrolysis	390
Graphite recovery	390
Cathode carbon additives	391
Anode carbon additives	392
Selective recovery of aluminium metal	396
FUNDAMENTAL VIEWPOINTS ON SPL DISPOSAL	396
Landfill	396
Process development	396
Transport	396
Removal from pot and sorting	397
Direct recycling	397
Disposal	397
Wet recirculation	398
Pyrohydrolytic recirculation	398
CATHODE DEVELOPMENT IN RELATION TO SPL	398
REFERENCES	399
VIII. NEW TRENDS AND DEVELOPMENTS	401
GENERAL TRENDS	401
CHOICE OF CARBON MATERIALS	402
SIDEWALL MATERIALS	402
REFRACTORIES	402
GLUING	403
MATHEMATICAL MODELS	403
„INERT“ OR WETTABLE CATHODES	404
A CLOSED DIMENSIONALLY STABLE CELL	404
REFERENCES	406
