

PREFACE xiii

1 COMPUTER CONTROL 1

- 1.1 Introduction 1
- 1.2 Computer Technology 3
- 1.3 Computer-Control Theory 8
- 1.4 Inherently Sampled Systems 12
- 1.5 How Theory Developed 14
- 1.6 References 17

2 SAMPLING OF CONTINUOUS-TIME SIGNALS 20

- 2.1 Introduction 20
- 2.2 Description of the Sampling Mechanism 21
- 2.3 The Sampling Theorem 22
- 2.4 Reconstruction 24
- 2.5 Aliasing or Frequency Folding 25
- 2.6 Practical Aspects of the Choice of the Sampling Period 30
- 2.7 Summary 31
- 2.8 Problems 32
- 2.9 References 33

3	COMPUTER-ORIENTED MATHEMATICAL MODELS: DISCRETE-TIME SYSTEMS 34
3.1	Introduction 34
3.2	Sampling of a Continuous-Time, State-Space System 35
3.3	Transformation of State-Space Models 43
3.4	Input-Output Models 45
3.5	The Z-transform 52
3.6	Poles and Zeros 55
3.7	Selection of Sampling Rate 60
3.8	Problems 61
3.9	References 64
4	PROCESS-ORIENTED MODELS 66
4.1	Introduction 66
4.2	Computer-Controlled System 67
4.3	The Modulation Model 68
4.4	Frequency Response 73
4.5	Pulse-Transfer Function Formalism 79
4.6	Multirate Sampling 88
4.7	Problems 91
4.8	References 91
5	ANALYSIS OF DISCRETE-TIME SYSTEMS 93
5.1	Introduction 93
5.2	Stability 94
5.3	Controllability, Reachability, and Observability 104
5.4	Analysis of Simple Feedback Loops 110
5.5	Problems 117
5.6	References 119
6	DISTURBANCE MODELS 121
6.1	Introduction 121
6.2	Reduction of the Effects of Disturbances 122
6.3	The Classic Disturbance Models 125
6.4	Piecewise Deterministic Disturbances 127
6.5	Stochastic Models of Disturbances 130
6.6	Continuous-Time Stochastic Processes 146
6.7	Sampling a Stochastic Differential Equation 151
6.8	Conclusions 151
6.9	Problems 152
6.10	References 154

7	DESIGN: AN OVERVIEW 156
7.1	Introduction 156
7.2	Operational Aspects 158
7.3	Principles of Structuring 161
7.4	A Top-Down Approach 162
7.5	A Bottom-Up Approach 165
7.6	Design of Simple Loops 168
7.7	Conclusions 171
7.8	Problems 172
7.9	References 172
8	TRANSLATION OF ANALOG DESIGN 174
8.1	Introduction 174
8.2	Alternative Ways for Approximations 175
8.3	Digital PID-controllers 180
8.4	State-Feedback Redesign 189
8.5	Frequency-Response Design Methods 192
8.6	Conclusions 193
8.7	Problems 194
8.8	References 195
9	STATE-SPACE DESIGN METHODS 197
9.1	Introduction 197
9.2	Regulation Based on Pole Placement by State Feedback 198
9.3	Observers 207
9.4	Output Feedback 212
9.5	The Servo Problem 214
9.6	Conclusions 218
9.7	Problems 218
9.8	References 220
10	POLE-PLACEMENT DESIGN BASED ON INPUT-OUTPUT MODELS 221
10.1	Introduction 221
10.2	Problem Formulation 222
10.3	Solution 224
10.4	An Algebraic Problem 227
10.5	A Design Procedure 229
10.6	Sensitivity to Modeling Errors 235
10.7	Relationships to Other Design Methods 237
10.8	Practical Aspects 240
10.9	A Design Example 244
10.10	Conclusions 251
10.11	Problems 251
10.12	References 253

11	OPTIMAL DESIGN METHODS: STATE-SPACE APPROACH	254
11.1	Introduction	254
11.2	Linear Quadratic Control	259
11.3	Prediction and Filtering Theory	268
11.4	Linear Quadratic Gaussian Control	273
11.5	Practical Aspects	275
11.6	Conclusions	277
11.7	Problems	277
11.8	References	280
12	OPTIMAL DESIGN METHODS: INPUT-OUTPUT APPROACH	282
12.1	Introduction	282
12.2	Problem Formulation	283
12.3	Optimal Prediction	287
12.4	Minimum-Variance Control	291
12.5	LQG Control	299
12.6	Practical Aspects	309
12.7	Conclusions	317
12.8	Problems	318
12.9	References	322
13	IDENTIFICATION	324
13.1	Introduction	324
13.2	Mathematical Model-Building	325
13.3	System Identification	326
13.4	The Principle of Least Squares	328
13.5	Recursive Computations	332
13.6	Examples	338
13.7	Summary	340
13.8	Problems	340
13.9	References	342
14	ADAPTIVE CONTROL	343
14.1	Introduction	343
14.2	Self-Tuning Control	344
14.3	Analysis	346
14.4	Other Approaches to Adaptive Control	351
14.5	Uses and Abuses of Adaptive Techniques	355
14.6	Conclusions	358
14.7	Problems	358
14.8	References	359

15 IMPLEMENTATION OF DIGITAL CONTROLLERS 361

- 15.1 Introduction 361
- 15.2 An Overview 362
- 15.3 Prefiltering and Computational Delay 364
- 15.4 Nonlinear Actuators 369
- 15.5 Operational Aspects 373
- 15.6 Numerics 378
- 15.7 Programming 388
- 15.8 Conclusions 394
- 15.9 Problems 394
- 15.10 References 398

A EXAMPLES 400

B MATRIX FUNCTIONS 405

C SIMNON—AN INTERACTIVE SIMULATION PROGRAM 408

D PROOF OF THEOREM 10.1 421
