

## TABLE OF CONTENTS

Chapter I.	Examples of Control Problems	
1.	Introduction.....	1
2.	A Problem of Production Planning.....	1
3.	Chemical Engineering.....	3
4.	Flight Mechanics.....	5
5.	Electrical Engineering.....	8
6.	The Brachistochrone Problem.....	10
Chapter II.	Formulation of the Control Problem	
1.	Introduction.....	14
2.	Preliminary Formulation of the Control Problem..	14
3.	Mathematical Formulation.....	19
4.	Equivalent Formulations.....	24
5.	Isoperimetric Problems and Parameter Optimization.....	29
6.	Relationship with the Calculus of Variations....	32
Chapter III.	Existence Theorems with Convexity Assumptions	
1.	Introduction.....	39
2.	Non-existence and Non-uniqueness of Optimal Controls.....	40
3.	Convexity Conditions, Regularity Conditions, and Conditions for Weak $L_1$ Convergence.....	46
4.	A General Existence Theorem.....	55
5.	An Existence Theorem in the Presence of Compact Constraints.....	60
6.	Non Compact Constraints.....	76
7.	Proof of Theorem 4.1.....	87
8.	Existence Without the Cesari Property.....	98
9.	Behavior of Controls in a Minimizing Sequence...	108
10.	Proof of Theorem 7.1.....	111

11.	Existence of Controls in Systems Linear in the State.....	114
Chapter IV. Existence Without Convexity		
1.	Introduction.....	118
2.	Inertial Controllers.....	120
3.	The Relaxed Problem.....	123
4.	The Chattering Lemma; Approximations to Relaxed Controls.....	128
5.	The Attainable Set.....	145
6.	Systems Linear in the State Variable.....	155
Chapter V. The Maximum Principle and Some of Its Applications		
1.	Introduction.....	169
2.	A Dynamic Programming Derivation of the Maximum Principle.....	170
3.	Statement of Maximum Principle.....	183
4.	An Example.....	193
5.	Relationship with the Calculus of Variations....	200
6.	Systems Linear in the State Variable.....	208
7.	Linear Systems.....	213
8.	The Linear Time Optimal Problem.....	222
9.	Linear Plant-Quadratic Criterion Problem.....	225
Chapter VI. Proof of the Maximum Principle		
1.	Introduction.....	240
2.	$\mathcal{F}$ - $\mathcal{N}$ Extremals.....	240
3.	A Necessary Condition for $\mathcal{F}$ - $\mathcal{N}$ Extremality...	249
4.	Perturbations of the Extremal Trajectory.....	252
5.	A Convex Set of Variations.....	267
6.	The Separation Lemma.....	272
7.	Analytic Consequences of the Separation Lemma...	282
8.	Proofs of Corollaries V.3.1 and V.3.2.....	287

Bibliographical Notes.....	294
Bibliography.....	298
Index.....	302
