Preface	v
Chapter 1. SAMPLING BY COMPUTER SIMULATION	
1.1 A Problem Without a Definite Answer	1
1.2 Population, Sample, and Estimates	2
1.3 Taking a Sample by Computer Simulation	4
1.4 Interpretation and Scope of Simulation Experiments	7
1.5 Estimation of the Mean	7
1.6 Approximating the Distribution of a Large Data Set	10
1.7 Basic Elements in Probability	13
Chapter 2. COMMONLY USED POPULATIONS AND THEIR GENERATION	
2.1 Abstract Discrete Populations	19
2.2 Some Common Discrete Distributions	21
2.3 Abstract Continuous Populations	24
2.4 Some Common Continuous Distributions	26
2.5 Moments of Distributions	32
2.6 Approximating Some Useful Statistical Distributions	36
2.7 Sampling from a Discrete Distribution	40
2.8 Sampling from a Continuous Distribution	43
2.9 Acceptance-Rejection Method of Generating Random Variates	46
2.10 Generating Normal Random Variates	52

**Chapter 3. THE BINOMIAL DISTRIBUTION AND ITS APPLICATIONS
TO SIMULATION**

3.1	Introduction	61
3.2	The Binomial Distribution and Its Normal Approximation	62
3.3	The Concept of a Confidence Interval	64
3.4	Monte Carlo Methods	67
3.5	Monte Carlo “Hit or Miss” Integration	70
3.6	Sample Size Determination	72
3.7	The Concept of Hypothesis Testing	74
3.8	Determination of Acceptance Rules and Sample Sizes in Hypothesis Testing	78
3.9	Two-sided Tests and the Relationship Between Hypotheses Testing and Confidence Intervals	82
3.10	The p -value	84
3.11	Application to Simulation	86

Chapter 4. COMPARISON OF STATISTICAL PROCEDURES

4.1	Introduction	96
4.2	The Minimum Variance Unbiased Estimator	97
4.3	The Mean Square Error and Efficiency	98
4.4	The Maximum Concentration Criterion	101
4.5	Other Statistical Inference Procedures	101
4.6	Parametric Statistical Inference	102
4.7	Non-parametric Statistical Inference	104
4.8	Robust Statistical Procedures	106

Chapter 5. ELEMENTARY STATISTICAL PROCEDURES

5.1	General Formulation	111
5.2	Inference on the Population Means	113
5.3	Inference on the Population Variances	117
5.4	Inference on Proportions	119
5.5	Inference on Frequency Table and Histogram	120
5.6	Correlation and Simple Linear Regression	124

Chapter 6. PERMUTATION TESTS

6.1 Knowing the Distribution of a Statistic	137
6.2 A Permutation Test for Two Independent Samples	138
6.3 A Permutation Test for a Paired Two-Sample Design	143
6.4 A Permutation Test for a Contingency Table	145

Chapter 7. JACKKNIFE AND BOOTSTRAP METHODS

7.1 Estimating MSE from Only One Sample	150
7.2 The Jackknife Algorithm	152
7.3 Applying the Jackknife Procedure	154
7.4 The Bootstrap Algorithm	160

Chapter 8. STATISTICAL APPLICATIONS TO
COMPUTER SCIENCE

8.1 Probabilistic Algorithms	170
8.2 The Quicksort	171
8.3 Software Testing and Reliability	176
