

Contents

Preface	vii
1. Graphical Techniques and Multivariate Data	1
Introduction	1
Graphical Techniques and Multivariate Data	2
Computer Aids to Graphical Techniques	3
Plan of Text	3
Summary	4
2. Ordination Techniques	5
Introduction	5
Representing Further Dimensions on a Two-dimensional Plot	6
Principal Components Analysis	8
Principal Co-ordinates Analysis	16
The Biplot	22
Non-metric Multidimensional Scaling	26
Non-linear Mapping	30
Assessing the Goodness of Fit of Two-dimensional Representations of Multivariate Data	35
A Comparison of Ordination Techniques	38
Summary	40
3. The Graphical Display of Clusters, and Similarity Matrices	42
Introduction	42
Hierarchical Clustering Techniques – Dendrograms	42
Direct Graphical Displays of Similarity and Distance Matrices	51
Some Further Methods for Displaying Clustering Solutions	58
Summary	63
4. Some Miscellaneous Techniques	65
Introduction	65
Probability Plotting Techniques for Multivariate Data	65
Andrews' Plots of Multivariate Data	81
Representing Multivariate Data as Faces	87
Summary	94
5. Some Final Comments	95
Introduction	95
Informal and Formal Inference	95
Large Data Sets	96
Summary	97
Appendix A: The Measurement of Similarity and Distance	99
Appendix B: Computer Programs	105
References	109
Index	115
