List of Figures	xi
List of Tables	xiii
Introduction	xv
1 Numerical Methods of Linear Algebra	1
1.1 General Properties of Linear Equations	1
1.2 Solving Systems of Linear Equations Using the Cramer and Gaussian Methods	3
1.3 Gaussian Algorithms	4
1.4 Solution of Linear Equations Containing Tridiagonal Matrixes	7
1.5 Iterative Methods of Solution of Linear Equations	9
1.6 Pseudoinverse Matrixes	12
1.7 Eigenvalues and Eigenvectors of Linear Operators	15
1.8 Characteristic Polynomials of Matrixes	21
1.9 Numerical Methods of Determination of Eigenvalues and Eigenvectors of Matrixes	24
1.9.1 Iterative Methods	24
1.9.2 Rotation Method	29
1.10 Clebsch–Gordan Coefficients	31
1.10.1 Angular Momentum Operator	31
1.10.2 Addition of Angular Momentum Operators	34
1.10.3 Properties of Clebsch–Gordan Coefficients	35
2 Numerical Analysis of Power Series and Polynomials	43
2.1 Actions with Power Series	43
2.2 Some Properties of Polynomials and their Zeros	52
2.2.1 Some Properties of Polynomials	52
2.2.2 Zeros of Polynomials	53
2.3 Division of Polynomials	55
2.4 Expansion of Fractional Rational Functions into Partial Fractions	60
2.5 Polynomials with Real Coefficients	64
2.5.1 Elementary Properties of Polynomials with Real Coefficients	64
2.5.2 Properties of Zeros of Polynomials Influencing on Stability of Dynamical Systems	65
2.5.3 Boundaries of Real Zeros of Polynomials with Real Coefficients	66
2.5.4 The Number Real Zeros of Polynomials with Real Coefficients	67

2.5.5	Algorithm of Determination of Real Zeros of Polynomials with Real Coefficients	69
2.6	Restoration of Polynomial by its Zeros	70
2.6.1	Expressions for the Polynomial and its Coefficients	70
2.6.2	Properties of Elementary Symmetric Functions	71
2.7	Restoration of Polynomial by its Values in Given Points	73
2.7.1	Expressions for the Polynomial and its Coefficients and Some Properties of the Auxiliary Functions	74
2.7.2	Main Properties of the Functions $\lambda_{jk}^{(m)}(\dots)$	78
2.8	Determination of Zeros of Polynomials by Means of Explicit Expressions	80
2.9	Approximate Solution of Algebraic Equations by Gräffe–Lobatchevsky Method	85
2.10	Calculation of Some Special Polynomials and Their Coefficients	87
2.10.1	Binomial Coefficients	88
2.10.2	Polynomials of Type $(\xi + z)^n$ and Analogous Polynomials of Several Variables	89
2.10.3	Polynomials of Type $\xi \pm z^n$	90
2.10.4	Pochhammer Symbol	91
2.10.5	Main Properties of Stirling Numbers	92
2.10.6	Bernoulli Polynomials and Euler Polynomials	94
2.10.7	Main Properties of Bernoulli Numbers and Euler Numbers	95
2.11	Calculation of Values of Classical Orthogonal Polynomials	96
2.11.1	General Properties of Orthogonal Polynomials	96
2.11.2	Jacobi Polynomials	98
2.11.3	Laguerre Polynomials	99
2.11.4	Hermite Polynomials	100
2.11.5	Legendre Polynomials	102
2.11.6	Tchebyshev Polynomials	104
2.11.7	Some Functions Connected with Orthogonal Polynomials	106
2.11.8	Algorithms	112
2.12	Sums Containing Polynomials and Fractional Rational Functions	113
3	Solution of Nonlinear Equations and Determination of Extremums	117
3.1	Auxiliary Theorems for Numerical Solution of Equations	117
3.2	Numerical equations	119
3.2.1	General Properties of Numerical Equations	120
3.2.2	Numerical Solution of Equations Containing Real Variables	121
3.2.3	Numerical Solution of Equations Containing Complex Variables	124
3.2.4	Numerical Solution of Systems of Equations	125
3.3	Maximums and minimums	127
3.3.1	Conditions of Existence of Maximums and Minimums for Functions of One Real Variable	128

3.3.2	Conditions of Existence of Maximums and Minimums for Functions of Several Real Variables	129
3.3.3	Numerical Methods	131
4	Interpolation and Approximation of Functions	135
4.1	Auxiliary Theorem for Approximation of Functions and the Questions Connected with It	135
4.2	Interpolation	137
4.2.1	Different Types of Restored Function	138
4.2.2	Interpolation Error	139
4.3	Interpolation by Means of Polynomials and Related Functions	140
4.4	Interpolation of Nonlinear Functions of the Certain Class	144
4.4.1	Function $a + b e^{cx}$	144
4.4.2	Function $(a + b x) \cdot e^{cx}$	145
4.4.3	Function $h + (a + b x) \cdot e^{cx}$	146
4.4.4	Function $a x^c \cdot (1 - b x)^d$	148
4.4.5	Function $a e^{cx} + b e^{dx}$	149
4.4.6	Function $h + a e^{cx} + b e^{dx}$	150
4.4.7	Function $e^{sx} \cdot (A \cos(\omega x) + B \sin(\omega x))$	151
4.4.8	Function $h + e^{sx} \cdot (A \cos(\omega x) + B \sin(\omega x))$	153
4.4.9	Realization of the Algorithms	154
4.5	Spline-Interpolation	155
4.5.1	Interpolation of Function of One Variable	155
4.5.2	Interpolation of Functions of Two and Three Variables	158
4.6	Approximation of Functions by the Generalized Least Squares Method on Discrete Set of Points	159
4.6.1	Linear Dependence of Restored Function on Parameters	160
4.6.2	Nonlinear Dependence of the Restored Function on Parameters	162
4.7	Determination of Boundaries of Search of Approximation Parameters	164
4.8	Other Methods of Determination of Boundaries	167
4.9	Approximation of Functions by the Generalized Least Squares Method in Interval or Region	169
4.10	Other Methods of Approximation of Functions	172
5	Numerical Differentiation and Integration	175
5.1	Numerical Differentiation	175
5.1.1	Some Formulas for Derivatives	175
5.1.2	Approximation of Differential Operators with Difference Operators	176
5.2	Numerical Integration of Functions by Means of Newton–Cotes Formulas	179
5.3	Numerical Integration of Functions by Means of the Formulas of Gaussian Type	184
5.3.1	Most Important Quadrature Formulas	184

5.3.2	Additional Quadrature Formulas	188
6	Calculation of Values of Some Functions	191
6.1	Main Transcendental Mathematical Constants	192
6.2	Solution of Transcendental Equations of Special Types	193
6.2.1	Equations Containing Linear-Exponential or Geometric- Exponential Dependence	193
6.2.2	Equations Containing Product of Geometrical Dependences	197
6.2.3	Equations Containing Sum of Exponents	202
6.3	Calculation of Values of Gamma-Function and Connected with it Functions	206
6.3.1	Main Properties of Considered Functions	206
6.3.2	Representation of the Functions in the Forms of Convergent Series and Integrals	210
6.3.3	Asymptotic Expansions	213
6.3.4	Riemann Zeta Function and Functions Connected with it	216
6.3.5	Calculation of Values of the Functions	218
6.4	Hypergeometric Functions	218
6.4.1	Elementary Properties of Hypergeometric Function	219
6.4.2	Differential Equations	220
6.4.3	Power Series	222
6.4.4	Functional Equations and Limits	223
6.4.5	Functional Equations for Hypergeometric Functions Satisfying Second-Order Differential Equations.	225
6.4.6	Differentiation and Integration Formulas	229
6.4.7	Integral Representations	230
6.4.8	Inequalities for Hypergeometric Functions	232
6.5	Cylindrical Function	233
6.6	Use of Hypergeometric Functions for Solving the Linear Differential Equa- tions	242
6.6.1	Differential Equations of any Order $N \geq 2$	242
6.6.2	Second-Order Differential Equations	244
6.7	Reduction Formulas for Hypergeometric Function	247
6.7.1	Reduction Formulas Generally	248
6.7.2	Reduction Formulas for the Function ${}_0F_1(\gamma, z)$	253
6.7.3	Reduction Formulas for the Function ${}_2F_0(\alpha_1, \alpha_2, z)$	255
6.7.4	Reduction Formulas for the Kummer Hypergeometric Function	256
6.7.5	Reduction Formulas for the Gauss Hypergeometric Function	259
6.8	Asymtotic Expansion of Hypergeometric Functions in Terms of Parameters	263
6.8.1	Asymptotic Expansions	265
6.8.2	Main Properties of Functions $h_r(z)$	270
6.8.3	Main Properties of Functions $\chi_r(\lambda, z)$	271
6.8.4	Main Properties of Functions $U_{jk}(\lambda)$, $V_{jk}(\lambda)$, $W_{jk}(\lambda)$ and $\Upsilon_{jk}(\dots)$	272
6.8.5	Asymptotic Expansion of Hypergeometric Functions Satisfying the Second-Order Differential Equations	275

6.8.6	Control Examples	277
6.8.7	Final Remarks	278
6.9	Elementary Methods of Calculation of Values of Hypergeometric and Cylindrical Functions	278
6.10	Calculation of Values of Hypergeometric Functions by Means of Power Series and Recurrence Relations	284
6.10.1	Description of the Method	284
6.10.2	Determination of Parameter ξ	290
6.10.3	Final Remarks	294
7	Numerical Methods for Solving Differential Equations	295
7.1	Numerical Solution of Ordinary Differential Equations by Runge–Kutta Method	296
7.2	Numerical Solving of Ordinary Differential Equations by Multistep Differ- ence Methods	303
7.3	One-dimensional Boundary Problems	307
7.4	Boundary Problems of General Form	310
7.5	Multidimensional Boundary Problems of Special Type	315
7.6	Diffusion Equation	319
7.6.1	Explicit Scheme	319
7.6.2	Classical Difference Scheme in the General Form	320
7.6.3	Method of Decomposition of the Operator	324
7.7	Wave Equation	325
7.8	Estimation of Derivatives of Unknown Function	328
7.9	Methods of Approximating Functions for the Numerical Solution of Differential Equations	329
8	Numerical Methods Used in Geometry	333
8.1	Three-Dimensional Rotation Matrixes	333
8.2	Description of Plane Curves by Splines	339
8.2.1	Curvilinear Coordinates Connected with the Plane Curve	339
8.2.2	Using Spline–Interpolation for Representation of a Curve	341
