

CONTENTS

<i>Acknowledgment</i>	<i>vii</i>
<i>Author Biographies</i>	<i>ix</i>
<i>Preface</i>	<i>xiii</i>
1. Introduction to MPEG-V Standards	1
1.1 Introduction to Virtual Worlds	1
1.2 Advances in Multiple Sensorial Media	3
1.3 History of MPEG-V	11
1.4 Organizations of MPEG-V	14
1.5 Conclusion	17
References	18
2. Adding Sensorial Effects to Media Content	21
2.1 Introduction	21
2.2 Sensory Effect Description Language	24
2.3 Sensory Effect Vocabulary: Data Formats for Creating SEs	36
2.4 Creating SEs	49
2.5 Conclusion	56
References	56
3. Standard Interfacing Format for Actuators and Sensors	57
3.1 Introduction	57
3.2 Interaction Information Description Language	57
3.3 DCV: Data Format for Creating Effects Using Actuators	65
3.4 SIV: Data Format for Sensing Information Using Sensors	73
3.5 Creating Commands and Accepting Sensor Inputs	83
3.6 Conclusion	87
References	87
4. Adapting Sensory Effects and Adapted Control of Devices	89
4.1 Introduction	89
4.2 Control Information Description Language	90
4.3 Device Capability Description Vocabulary	99
4.4 Sensor Capability Description Vocabulary	110
4.5 User's Sensory Effect Preference Vocabulary	118
4.6 Sensor Adaptation Preference Vocabulary	126
4.7 Conclusion	128
References	129

5. Interoperable Virtual World	131
5.1 Introduction	131
5.2 Virtual-World Object Metadata	133
5.3 Avatar Metadata	138
5.4 Virtual Object Metadata	149
5.5 Conclusion	153
References	153
 6. Common Tools for MPEG-V and MPEG-V Reference SW with Conformance	 155
6.1 Introduction	155
6.2 Common Types and Tools	156
6.3 Classification Schemes	160
6.4 Binary Representations	161
6.5 Reference Software	163
6.6 Conformance Test	167
6.7 Conclusion	168
References	168
 7. Applications of MPEG-V Standard	 171
7.1 Introduction	171
7.2 Information Adaptation from VW to RW	171
7.3 Information Adaptation From the RW into a VW	176
7.4 Information Exchange Between VWs	184
References	187
 <i>Terms, Definitions, and Abbreviated Terms</i>	 189
<i>Index</i>	191
