List of Corresponding Authors (Volume 1)	xi
1. Bionanomaterials: Separation Processes, Characterization, and Properties	1
<i>Aji P. Mathew and Kristiina Oksman</i>	
1.1. Introduction to the content	1
1.2. Contents	2
2. Structure and Physical Properties of Cellulose: Micro- to Nanoscale	5
<i>Yoshiharu Nishiyama</i>	
2.1. Introduction	5
2.2. Biosynthesis and the morphogenesis of nanocellulose	6
2.2.1 Crystalline nature of native cellulose nanofibers	7
2.3. Packing of cellulose chains and polymorphism	8
2.3.1 Native cellulose	8
2.3.2 Amine complex and cellulose III	9
2.3.3 Alkali swelling and cellulose II	10
2.4. Accessibility, constraint, and chemical reactivity	11
2.4.1 Core, surface, and bundle	11
2.4.2 Long-range periodicity along the chain	11
2.4.3 Terminology and perception of nanocellulose	12
2.5. Mechanical properties of cellulose microfibrils	13
2.5.1 Intrinsic tensile modulus	13
2.5.2 Other elastic moduli	14
2.6. Thermal properties of cellulose	14
2.7. Conclusion and perspectives	15
References	15
3. Natural Resources and Residues for Production of Bionanomaterials	19
<i>Mehdi Jonoobi, Aji P. Mathew and Kristiina Oksman</i>	
3.1. Introduction	19

3.2.	Structure of the raw material source	21
3.3.	Bionanomaterials from plant sources	24
3.4.	Bionanomaterials from marine sources	29
3.5.	Conclusions	31
	Acknowledgments	31
	References	32
4.	Pretreatment of Cellulose for Further Processing	35
	<i>Akira Isogai</i>	
4.1.	Introduction	35
4.2.	TEMPO-mediated oxidation	36
4.2.1	TEMPO/NaBr/NaClO system at pH 10	37
4.2.2	TEMPO/NaClO/NaClO ₂ system at pH 5 or 7	40
4.2.3	TEMPO electro-mediated oxidation at pH 7 or 10	41
4.3.	Nanofibrillation of TEMPO-oxidized cellulose	43
4.3.1	Characterization of TOCNs	45
4.3.2	Conversion of TOCN/water dispersion to bulk materials	45
4.4.	TOCN-containing composites and future applications	48
	References	49
5.	Technologies for Separation of Cellulose Nanofibers	53
	<i>Maiju Hietala and Kristiina Oksman</i>	
5.1.	Introduction	53
5.2.	Pretreatments	55
5.3.	Mechanical separation of CNFs	57
5.3.1	High-pressure homogenization	57
5.3.2	Other methods	63
5.4.	Conclusions	66
	References	68
6.	Separation of Cellulose Nanocrystals	73
	<i>Grégory Chauve, Carole Fraschini and Bruno Jean</i>	
6.1.	Introduction	73
6.2.	CNC: Emergence of a versatile material	74
6.3.	Various recipes, sources, and end products	74
6.4.	H ₂ SO ₄ hydrolysis and its influencing parameters	75
6.5.	The special features of sulfuric acid-extracted CNCs	78
6.6.	CNCs size and morphology	78
6.7.	Stability over time issues	80
6.8.	Size fractionation/size separation/collection	80
6.9.	Pre-industrialization challenges	81

6.9.1	Drying issues	82
6.9.2	Control of the self-assembly	82
6.9.3	Toxicity evaluation	82
6.9.4	Scale-up equipment and safety issues	82
6.10.	World production capacity	82
6.11.	Post-industrialization challenges	83
	Acknowledgments	84
	References	84
7.	Starch Nanocrystals	89
	<i>Mariana Pereda and Alain Dufresne</i>	
7.1.	Introduction	89
7.2.	Starch	90
7.2.1	Multiscale structure of starch granules — semicrystallinity	91
7.3.	Starch nanocrystals	92
7.3.1	Hydrolysis treatments	92
7.3.2	Morphology	93
7.4.	Kinetics of hydrolysis	94
7.5.	Optimization of the SNC extraction process	97
7.5.1	Membrane microfiltration	97
7.5.2	Enzymatic pretreatment	99
7.6.	Conclusions	101
	References	101
8.	Production of Bacterial Cellulose: Use of a New Strain of Microorganism	105
	<i>Cristina Castro, Ilse Cleenwerck, Robin Zuluaga, Gloria Caro, Jean-Luc Putaux, Orlando J. Rojas and Piedad Gañán</i>	
8.1.	Introduction	105
8.2.	New cellulose-producing bacteria belonging to the Gluconacetobacter genus	106
8.3.	Cellulose synthesis by <i>G. medellinensis</i> ID13488	110
8.4.	Morphology and structure of the bacterial cellulose	113
8.5.	Conclusions	117
	References	118
9.	Chemical Functionalization as a Powerful Tool to Broaden the Scope of Applications of Cellulose Nanofibers	123
	<i>Philippe Tingaut and Tanja Zimmermann</i>	
9.1.	Introduction	123

9.2. Functional films from CNFs	125
9.3. Reinforcing agent in composite materials	128
9.4. Aerogels and foams from CNFs	130
9.5. Conclusions	133
References	133
10. Rheological Properties of Nanocellulose Materials	139
<i>Guan Gong</i>	
10.1. Introduction	139
10.2. Rheological properties of CNF suspensions	140
10.2.1 Effect of fiber concentration and dimension	140
10.2.2 Effect of surface modification and polymer additives	145
10.3. Rheological properties of CNC suspensions	147
10.3.1 Influence of concentration, surface charge, and crystalline structure of crystals	147
10.3.2 Influence of organic solvents and polymer solutions	152
10.4. Summary	154
References	154
11. Microscopic Characterization of Nanofibers and Nanocrystals	159
<i>Robert J. Moon, Tiina Pöhler and Tekla Tammelin</i>	
11.1. Introduction	159
11.2. Cellulose nanomaterials morphology characterization	160
11.2.1 Optical microscopy	160
11.2.2 Scanning electron microscopy	162
11.2.3 Transmission electron microscopy	164
11.2.4 Atomic force microscopy — topography	165
11.3. Cellulose nanomaterial structural characterization	167
11.3.1 Wide-angle X-ray diffraction	168
11.3.1.1 Peak height method	168
11.3.1.2 Peak deconvolution method	169
11.3.1.3 Amorphous subtraction method	169
11.3.2 Raman spectroscopy	170
11.3.3 Fourier transform infrared spectroscopy	171
11.3.4 Solid-state ¹³ C nuclear magnetic resonance	171
11.4. Cellulose nanomaterials mechanical property measurement	172
11.4.1 AFM — force spectroscopy	173
11.4.1.1 Axial mechanical properties	173
11.4.1.2 Transverse mechanical properties	174
11.4.2 Raman spectroscopy	174
11.4.3 X-ray diffraction and inelastic X-ray scattering	175
11.5. Cellulose nanomaterials surface chemistry	175

11.6. Conclusions	176
References	176
12. Toxicity and Health Issues	181
<i>Marja Pitkänen, Heli Kangas and Jari Vartiainen</i>	
12.1. Introduction	181
12.2. Biobased nanomaterials	183
12.2.1 Nanostructured celluloses: Fibrillated, crystalline and bacterial	183
12.2.2 Nanostructured chitin — chitin and chitosan nanofibrils	186
12.2.3 Nanostructured starch — starch nanocrystals	187
12.3. Current regulatory status for nanomaterials	187
12.4. Risk assessment for nanomaterials	189
12.5. Toxicity of biobased nanomaterials	190
12.5.1 Toxicity to humans	190
12.5.1.1 Cellulose microfibrils	190
12.5.1.2 Cellulose nanofibrils	190
12.5.1.3 Bacterial cellulose	191
12.5.1.4 Cellulose nanocrystals	192
12.5.1.5 Nanostructured chitin	193
12.5.1.6 Nanostructured starch	193
12.5.2 Environmental toxicity	194
12.5.3 Exposure assessment	196
12.5.3.1 Consumers' exposure	196
12.5.3.2 Occupational exposure	197
12.5.3.3 Environmental exposure	198
12.5.3.4 Risk assessment	198
12.6. Discussion	199
12.7. Conclusions	201
References	201
13. Cellulose Nanofibers and Their Use in Paper Industry	207
<i>Raphael Bardet and Julien Bras</i>	
13.1. Introduction	207
13.2. Bulk addition	209
13.2.1 Direct addition of CNF in the pulp suspension	209
13.2.2 Multiply strategy	211
13.2.3 CNF and polyelectrolytes	212
13.2.3.1 Retention and strengthening agents	212
13.2.3.2 Sizing agent	213
13.2.3.3 Optical brightening agent	213
13.2.3.4 Hybrid furnish additives: Filler/CNF	214

13.3. CNFs and paper surface treatment	216
13.3.1 Barrier properties	217
13.3.1.1 Pure CNF coating	217
13.3.1.2 Multilayer approach for barrier applications	218
13.3.1.3 CNF blend for barrier packaging	219
13.3.1.4 Hybrid barrier coating	220
13.3.2 Printing properties	221
13.3.2.1 Pure CNF coating	222
13.3.2.2 CNFs and polymer blend for printing applications	222
13.3.2.3 CNF/hybrid and replacement of synthetic binder	223
13.3.3 Functional properties	225
13.3.3.1 Hydrophobic paper	225
13.3.3.2 Antimicrobial paper	225
13.3.3.3 Conductive paper	226
13.4. Conclusions	226
References	227
14. Industrial Point of View of Nanocellulose Materials and Their Possible Applications	233
<i>Grégory Chauve and Julien Bras</i>	
14.1. Introduction	233
14.2. The emergence of nanocellulose materials	234
14.3. Cellulose nanocrystals	235
14.3.1 Today's CNC players	235
14.3.2 Production process issues	235
14.3.3 Marketing issues	237
14.3.4 Environmental and regulation issues	237
14.3.5 The cost aspect	237
14.3.6 Main possible applications and industrial end users	237
14.4. Cellulose nanofibers	238
14.4.1 Today players and production perspectives	240
14.5. Possible applications and industrial users	243
14.5.1 Nanocomposites	244
14.5.2 Paper application	245
14.5.3 Films and aerogels	246
14.5.4 Challenges for industrial applications	247
14.6. Perspectives and challenges of the nanocellulose industries	248
