Part VIII

MATHEMATICAL LOGIC

Chapter XLIV Logic and mathematics

4.1 The subject of mathematical logic — 4.2 Division into periods	3
---	---

Chapter XLV Raymundus Lullus' system

45.1 <i>Ars magna</i> — 45.2 Conclusions	8
--	---

Chapter XLVI Leibniz's logic

46.1 The logical researches of Leibniz — 46.1.1 Leibniz's conception of syllogistic — 46.1.2 <i>De arte combinatoria</i> — 46.1.3 <i>Characteristica universalis</i> — 46.1.4 Logical calculus — 46.1.5 Logical rules — 46.1.6 Theory of demonstration — 46.2 Syllogistic researches subsequent to Leibniz	15
--	----

Chapter XLVII The algebra of logic

47.1 George Boole and his logic — 47.1.2 Calculus of classes — 47.1.3 Logic of propositions — 47.2 Other English logicians — 47.3 The second group of algebraists: R. Grassmann, C. S. Peirce and E. Schröder	39
---	----

Chapter XLVIII Gottlob Frege

48.1 Gottlob Frege and his works — 48.1.1 What is logic? — 48.2 Frege's system — 48.2.1 Primitive ideas — 48.2.2 The function — 48.2.3 Generality — 48.2.4 The axioms of the system and the derivation of theorems — 48.2.5 Sense and meaning — 48.2.6 The definition — 48.3 Conclusions	51
--	----

Chapter XLIX Peano and the Italian School

49.1 Giuseppe Peano (1858—1932) — 49.1.1 <i>Arithmetices principia nova methodo exposita</i> — 49.1.2 Mathematical logic — 49.1.2.1 Relations — 49.1.2.2 Forms of reasoning — 49.1.2.3 About definition — 49.2 Peano's School — 49.2.1 Cesare Burali-Forti (1861—1931) — 49.2.2 Giovanni Vailati (1863—1909) — 49.2.3 Alessandro Padoa (1888—1937) — 49.2.4 Giovanni Vacca (1872—1953) — 49.2.5 Other researchers — 49.3 Conclusion	64
---	----

Chapter L Principia Mathematica

50.1 Introduction — 50.1.1 The theory of deduction (propositional calculus) — 50.1.1.1 Primitive ideas — 50.1.1.2 Primitive propositions — 50.1.1.3 Rules of deduction — 50.1.2 The theory of propositional functions — 50.1.2.1 General and existential propositions — 50.1.2.2 Theory of propositional functions of one apparent variable — 50.1.2.3 Theory of two apparent variables — 50.1.3 The theory of logical types — 50.1.4 Identity — 50.1.4.1 Descriptions — 50.1.5 Calculus of classes — 50.1.6 Calculus of relations — 50.1.7 Cardinal arithmetic — 50.2 Conclusions	87
--	----

Chapter LI The logico-mathematical paradoxes

51.1 The enunciation of paradoxes — 51.2 Solutions — 51.3 Conclusions	113
---	-----

Chapter LII The development of mathematical logic

52.1 Logicism — 52.1.1 Leon Chwistek (1884—1944) — 52.1.2 Ludwig Wittgenstein — 52.1.3 Jean Nicod — 52.1.4 F. P. Ramsey (1903—1930) — 52.1.5 R. Carnap — 52.2. Formalism — 52.2.1 David Hilbert's formal system — 52.2.1.1 Propositional calculus — 52.2.1.2 The predicate calculus — 52.2.1.3 The enlarged calculus of predicates — 52.2.1.4 The mechanism of demonstration — 52.2.2 The development of axiomatic research — 52.3 Intuitionism — 52.3.1 Formalization of intuitionistic logic — 52.4 Comparison between logicism, formalism and intuitionism — 52.5 Important contributions to mathematical logic — 52.5.1 Alonzo Church (b. 1903) — 52.5.2 Haskell B. Curry (b. 1900) — 52.5.3 Willard Van Orman Quine (b. 1908) — 52.5.4 Kurt Gödel (b. 1906) — 52.5.5 S. C. Kleene (b. 1909) — 52.6 Other researchers	118
---	-----

Chapter LIII Many-valued logics

53.1 The concept of many-valued logic — 53.2 The logic of strict implication — 53.2.1 The strict implication — 53.2.2 Primitive ideas — 53.2.3 Definitions — 53.2.4

Primitive propositions — 53.2.5 Theorems — 53.2.6 Strict implication and material implication — 53.2.7 The consistency relation — 53.2.8 Modal functions and their reduction — 53.2.9 Considerations about the systems of strict implication — 53.3 Łukasiewicz's logics — 53.3.1 The analysis of modalities in two-valued logic — 53.3.1.1 The consequences of the two first modal propositions — 53.3.2 Three-valued logic — 53.3.2.1 The axiomatic structure of three-valued logic — 53.3.3 The philosophical meaning of many-valued logics. The Non-Chrysippian logics — 53.3.4 Other researches — 53.3.5 General considerations on Łukasiewicz's logic — 53.4 Intuitionistic logic as many-valued logic — 53.5 Deontic logic — 53.6 Applications of many-valued logics — 53.6.1 The application of many-valued logics to the study of formal systems — 53.6.2 The application of many-valued logics to mathematics — 53.6.3 The application of many-valued logics to quantum mechanics — 53.6.4 Many-valued logics and logical paradoxes — 53.6.5 The application of many-valued logics to the study of relay and switching circuits — 53.7 Modal and many-valued logics — 53.8 Conclusions	145
--	-----

Chapter LIV The decision problem

1

54.1 The power of symbols — 54.2 The enunciation of the problem — 54.2.1 The decision problem in the propositional calculus — 54.2.2 The decision problem in the functional calculus — 54.3 The undecidability problem (Gödel) — 54.3.1 Studies related to the limitation of formal systems — 54.4 Conclusions	182
--	-----

Chapter LV Formal technique (systems and metaseystems)

55.1 The axiomatic method — 55.2 Formal systems — 55.2.1 Construction of a formal system — 55.2.2 Presentation, representation, and interpretation — 55.2.2.1 Presentation of a system — 55.2.2.2 Representation of a system — 55.2.2.3 Interpretation of a system — 55.3 Systems and metaseystems — 55.3.1 Logical syntax — 55.3.2 Semantics — 55.3.3 Metatheoretical properties of a formal system — 55.3.3.1 Coherence — 55.3.3.2 Saturation — 55.3.3.3 Solvability — 55.3.3.4 Categoricity — 55.4 The main formal systems — 55.5 Logics with schemata — 55.6 Combinatory logics — 55.7 Algorithms — 55.8 Boolean and Łukasiewiczian algebras — 55.9 Structures — 55.10 The method of arithmetization and the recursive functions — 55.11 Critical remarks	196
---	-----

Chapter LVI General considerations on mathematical logic

56.1 The nature of mathematical logic — 56.2 Relativity of logic — 56.2.1 Consequences of the relativization of logic — 56.3 Logical conventionalism — 56.4 Extensional logic and intensional logic — 56.5 Old logic and new logic	224
--	-----

Chapter LVII Reactions to mathematical logic

57.1 New views on logic — 57.1.1 Jean Piaget and operative logic — 57.1.2 René Poirier. Logic and modality — 57.1.3 Leo Gabriel and integral logic — 57.1.4 Robert Blanché and intellectual structures — 57.1.5 Petre Botezatu and operative logic — 57.1.6 The pluralist, hierarchic logic of Augustin Sesmat — 57.1.7 Octav Onicescu and the logic of truth — 57.1.8 Attempts to formalize dialectic logic — 57.2 Conclusion — Selected bibliography	239
--	-----

Part IX

CONCLUSION

Chapter LVIII General conclusions

58.1 The history of logic — 58.2 Complementarity of the modalities of logos — 58.3 The logic of the Universal — 58.4 The thinking on thinking	259
Index of names	267
Index of subjects	273
