Contents

Preface	xv
1 Smart Hydrogels: Therapeutic Advancements in Hydrogel Technology for Smart Drug Delivery Applications	1
<i>Gabriel Goetten de Lima, Diwakar Kanwar, Derek Macken, Luke Geever, Declan M. Devine and Michael J.D. Nugent</i>	
1.1 Introduction	1
1.2 Types and Properties of Smart Polymer Hydrogels	4
1.2.1 Temperature-Responsive Hydrogels	4
1.2.2 pH-Sensitive Hydrogels	5
1.2.3 Glucose-Responsive Hydrogels	7
1.2.4 Electro-Signal Sensitive Hydrogels	8
1.2.5 Light-Sensitive Hydrogels	8
1.2.6 Multi-Responsive Smart Hydrogels	10
1.3 Applications of Smart Polymer Hydrogels	11
1.4 Conclusion	11
References	13
2 Molecularly Imprinted Polymers for Pharmaceutical Applications	17
<i>Ambareesh Kumar Singh, Neha Gupta, Juhi Srivastava, Archana Kushwaha and Meenakshi Singh</i>	
2.1 Introduction	17
2.2 Fluoroquinolone Antibiotics	19
2.3 Sulfonamides	36
2.4 Miscellaneous	41
2.5 Conclusions and Future Prospects	48
2.6 Acronyms and Abbreviations	48
References	50
3 Polymeric Stabilizers for Drug Nanocrystals	67
<i>Leena Peltonen, Annika Tuomela and Jouni Hirvonen</i>	
3.1 Introduction	67
3.2 Methods for Nanocrystallization	68
3.2.1 Bottom-Up Technologies	69
3.2.2 Top-Down Technologies	69
3.2.3 Combination Technologies	71

3.3	Stabilization Mechanisms of the Nanocrystals	71
3.4	Polymers for Nanocrystal Stabilization	73
3.4.1	Polymers of Natural Origin	75
3.4.2	Synthetic Polymers	77
3.5	Effect of Stabilizing Polymers on Drug Biocompatibility, Bioactivity, Membrane Permeability and Drug Absorption	79
3.6	Conclusions and Future Perspective	82
	References	82
4	Polymeric Matrices for the Controlled Release of Phosphonate Active Agents for Medicinal Applications	89
	<i>Konstantinos E. Papathanasiou and Konstantinos D. Demadis</i>	
4.1	Introduction	89
4.2	Polymers in Drug Delivery	91
4.2.1	Polyesters	92
4.2.1.1	Poly(lactic acid), Poly(glycolic acid), and Their Copolymers	92
4.2.1.2	Poly(ethylene glycol) Block Copolymers	93
4.2.1.3	Poly(ortho esters)	94
4.2.1.4	Poly(anhydrides)	96
4.2.1.5	Poly(anhydride-imides)	97
4.2.1.6	Poly(anhydrite esters)	98
4.2.2	Poly(amides)	99
4.2.3	Poly(iminocarbonates)	100
4.3	Release of Phosphonate-Based Drugs	100
4.4	Conclusions/Perspectives	114
	References	115
5	Hydrogels for Pharmaceutical Applications	125
	<i>Veena Koul, Sirsendu Bhowmick and Thanusha A.V.</i>	
5.1	Introduction	125
5.2	What are Hydrogels?	126
5.3	Classification of Hydrogels	126
5.4	Preparation of Hydrogels	127
5.5	Characterization of Hydrogels	128
5.6	Application of Hydrogels	131
5.6.1	Wound Dressing	131
5.6.2	Implantable Drug Delivery Systems	133
5.6.3	Tissue Engineering Substitute	134
5.6.4	Injectable Hydrogels	136
5.7	Conclusion	137
	Acknowledgement	138
	References	138
6	Responsive Plasmid DNA Hydrogels: A New Approach for Biomedical Applications	145
	<i>Diana Costa, Artur J.M. Valente and João Queiroz</i>	

6.1	Introduction	145
6.2	DNA-Based Hydrogels	147
6.3	Controlled and Sustained Release	150
6.3.1	Photodisruption of Plasmid DNA Networks	150
6.3.2	Release of Plasmid DNA	152
6.3.3	Release of Chemotherapeutic Drugs	154
6.3.4	<i>In Vitro</i> Studies	155
6.4	Combination of Chemo and Gene Therapies	156
6.5	Conclusions and Future Perspectives	158
	References	159
7	Bioactive and Compatible Polysaccharides Hydrogels Structure and Properties for Pharmaceutical Applications	163
	<i>Teresa Cristina F. Silva, Andressa Antunes Prado de França and Lucian A. Lucia</i>	
7.1	Introduction	163
7.2	Materials and Methods	164
7.2.1	Isolation of Xylans	166
7.2.1.1	Preparing Hydrogel without A Priori Grafting of Vinyl Group	166
7.2.1.2	Preparing Hydrogels for Grafting Polymerization	166
7.2.2	Hydrogel Synthesis and Characterization	166
7.2.2.1	Preparing Hydrogel without A Priori Grafting of Vinyl Group	166
7.2.2.2	Preparing Hydrogels for Grafting Polymerization	166
7.2.3	Doxorubicin Release from Xylan-Based Hydrogels	167
7.3	Results and Discussion	167
7.3.1	Hydrogel without A Priori Grafting of Vinyl Group	167
7.3.1.1	Reaction of PAA with Wood	167
7.3.1.2	Hydrogel Preparation and Characterization	168
7.3.2	Hydrogels for Grafting Polymerization	170
7.3.2.1	Morphology and Rheological Properties	172
7.3.2.2	Swelling Behavior	173
7.3.2.3	Drug Release	174
	References	175
8	Molecularly Imprinted Polymers for Pharmaceutical Analysis	179
	<i>Piotr Luliński</i>	
8.1	Introduction	179
8.2	Overview of the Imprinting Process	180
8.3	Molecularly Imprinted Polymers for Separation Purposes	182
8.3.1	Bulk Imprinted Materials	182
8.3.2	Imprinted Monoliths	185
8.3.3	Imprinted Stir-Bar Sorptive Extraction	187
8.3.4	Molecularly Imprinted Microparticles and Nanostructures	188
8.3.5	Magnetic Imprinted Materials	192

8.3.6	Miscellaneous Imprinted Formats	194
8.4	Molecularly Imprinted Sensors for Drugs	195
8.5	Conclusion and Future Perspective	197
	References	197
9	Prolamine-Based Matrices for Biomedical Applications	203
	<i>Pradeep Kumar, Yahya E. Choonara and Viness Pillay</i>	
9.1	Introduction	203
9.2	Gliadin – Prolamine Isolated from Wheat Gluten	204
9.2.1	Gliadin Nanoparticles	205
9.2.1.1	Hydrophobicity of Gliadin	206
9.2.1.2	Solubility Parameter	207
9.2.2	Controlled Drug Release from Gliadin-Based Matrices	207
9.2.2.1	Salting-Out	207
9.2.2.2	Gliadin Films	208
9.2.2.3	Gliadin Foams	209
9.3	Zein - Prolamine Isolated from Corn Gluten Meal	209
9.3.1	Drug-Loaded Zein Particulates	210
9.3.1.1	Microsphere-Based Films and Tablets	210
9.3.1.2	Zein-Based Blends and Complexes	213
9.3.1.3	Zein-Based Nanoparticulate Systems	213
9.3.2	Biomedical Applications of Zein-Based Matrices	215
9.4	Soy Protein – Prolamine Isolated from Soybean	217
9.4.1	Soy Protein Derivatives	218
9.4.2	Soy-Based Polymer Blends	218
9.4.3	Soy-Based Crosslinked Matrices	219
9.4.4	Cold-Set Gelation of Soy Protein	221
9.5	Kafirin – Prolamine Isolated from Sorghum	222
9.5.1	Microparticles	223
9.5.2	Compressed Matrices	224
9.6	Conclusion and Future Perspective	224
	References	225
10	Hydrogels Based on Poly(2-oxazoline) S for Pharmaceutical Applications	230
	<i>Anna Zahoranová and Juraj Kronek</i>	
10.1	Hydrogels for Medical Applications	231
10.1.1	Controlled Drug Delivery and Release	232
10.1.1.1	Prolonged Effect of Drugs	232
10.1.1.2	Stimuli-Sensitive Drug Delivery	234
10.1.2	3D Cell Cultivation	236
10.1.2.1	Chemical Composition	237
10.1.2.2	Porosity and Pore Size	238
10.1.3	Tissue Engineering	238
10.1.4	Nonenzymatic Detachment of Cells	239
10.2	Poly(2-oxazoline)s in Pharmaceutical Applications	240
10.2.1	Biocompatibility of Poly(2-oxazoline)s	241

10.2.2	Biomedical Applications of Poly(2-oxazoline)s	244
10.3	Poly(2-oxazoline)-Based Hydrogels – Synthetic Strategies	245
10.3.1	Hydrogels Containing Segments of Poly(2-oxazoline)s	245
10.3.2	Crosslinked Poly(2-oxazoline)s	248
10.4	Applications of Poly(2-oxazoline)-Based Hydrogels	250
10.4.1	Controlled Delivery of Drugs	250
10.4.1.1	Hydrogels for DNA Binding	251
10.4.1.2	Hydrogels Modified by Peptidic Sequences	252
10.5	Conclusions and Future Perspectives	252
	Acknowledgement	253
	References	254
11	Mixed Biocompatible Block Copolymer/Lipid Nanostructures as Drug Nanocarriers: Advantages and Pharmaceutical Perspectives	259
	<i>Natassa Pippa, Stergios Pispas and Costas Demetzos</i>	
11.1	Introduction	259
11.2	Drug Delivery Systems	261
11.2.1	Conventional Drug Delivery Systems	261
11.2.2	Mixed Drug Delivery Systems Employing Biocompatible Polymers	263
11.3	Mixed Biocompatible Block Copolymer/Lipid Drug Nanocarriers: The Concept through Examples	266
11.3.1	Preparation of Mixed Drug Nanocarriers	266
11.3.2	Physicochemical Characterization of Mixed Drug Nanocarriers	267
11.3.3	Thermotropic Behavior of Mixed Drug Nanocarriers	270
11.3.4	Imaging of Mixed Drug Nanocarriers	274
11.3.5	<i>In Vitro</i> Drug Release from the Mixed Nanocarriers	274
11.4	Conclusion and Future Perspective	277
	References	279
12	Nanoparticle Polymer-Based Engineered Nanoconstructs for Targeted Cancer Therapeutics	287
	<i>Anand Thirunavukarasou, Sudhakar Baluchamy and Anil K. Suresh</i>	
12.1	An Overview of Metal Polymer-Based Nanoconstructs	287
12.1.1	Tumor-Specific Targeting Using Nanoparticle-Polymer Nanoconstructs	290
12.1.2	Cytotoxicity Assessments of Nanoparticle-Polymer Constructs	291
12.1.2.1	MTT and/or MTS Assay	291
12.1.2.2	Live/Dead Staining Assay	291
12.1.3	Physical Characterization Techniques to Assess the Cellular Uptake of the Nanoparticle-Polymer Constructs	292
12.1.3.1	Inductively Coupled Plasma Mass Spectroscopy (ICP-MS) for Quantitative Uptake	292
12.1.3.2	Dark Field Microscopy	292

12.1.3.3	Ultramicrotome-Based Trans-Sectional Transmission Electron Microscopy Imaging	293
12.2	Conclusions	293
	Acknowledgements	294
	References	294
13	The Importance of Dendrimers in Pharmaceutical Applications	297
	<i>Verónica Brunetti, Marisa Martinelli and Miriam C. Strumia</i>	
13.1	Introduction	297
13.1.1	What are Dendrimers?	298
13.1.2	Synthetic Methods for Dendritic Molecules	300
13.1.2.1	Divergent Synthesis	300
13.1.2.2	Convergent Synthesis	301
13.2	Properties of Dendritic Polymers Useful for Biomedical Applications	301
13.3	Current Pharmaceutical Products Prepared from Dendritic Polymer: Promising Prospects for Future Applications	303
13.3.1	Diagnostic Technologies	303
13.3.2	Dendritic Polymers in Prevention	304
13.3.3	Therapeutic Applications	307
13.4	Conclusions	310
	References	310
14	Pharmaceutical Polymers: Bioactive and Synthetic Hybrid Polymers	315
	<i>Roxana Cristina Popescu and Alexandru Mihai Grumezescu</i>	
14.1	Introduction	315
14.2	General Obtainment Methods for Polymeric Microspheres and Hybrid Materials	320
14.3	Stimuli-Responsive (pH/temperature/photo) polymers	321
14.3.1	PEG	321
14.3.2	PLA and PLGA	325
14.3.3	PVP	328
14.3.4	PVA	333
14.4	Conclusions	333
	Acknowledgements	334
	References	334
15	Eco-friendly Polymer-Based Nanocomposites for Pharmaceutical Applications	341
	<i>Ida Idayu Muhamad, Suguna Selvakumaran, Mohd Harfiz Salehudin and Saiful Izwan Abd Razak</i>	
15.1	Introduction	342
15.1.1	Eco-friendly Polymers, the Briefs	342
15.1.2	Composite	342
15.1.3	Nanocomposites	343
15.1.4	Eco-friendly Nanocomposite	343
15.1.5	Market Trend in Eco-friendly Polymer Nanocomposites in Biomedical Application	344

15.2	Structure and Properties of Some Eco-friendly Pharmaceutical Polymers	345
15.2.1	Starch	346
15.2.2	Chitosan	347
15.2.2.1	Application of Chitosan	348
15.2.3	Alginate (E400-E404)	349
15.2.4	Polyhydroxyalkanoates (PHAs)	349
15.2.5	Poly(lactic acid) (PLA)	350
15.2.6	Gelatin	351
15.2.7	Casein Protein	351
15.2.8	Carrageenan	352
15.3	Review of Development and Application of Selected Eco-friendly Polymer-Based Nanocomposites	355
15.3.1	Eco-friendly Polymer Matrix Nanocomposites for Tissue Engineering	355
15.3.2	Polymer Nanocomposites in Drug Delivery	356
15.3.3	Nanocomposite-Based Biosensor on Eco-friendly Polymer	358
15.3.4	Polymer Nanocomposite-Based Microfluidics	359
15.4	Case Study on Carrageenan-Based Nanocomposite	360
15.4.1	Carrageenan-Based Metallic Nanocomposite	360
15.4.2	Advantageous of Metallic Nanocomposite in Pharmaceutical Applications	366
15.5	Summary	366
	References	367
16	Biodegradable and Biocompatible Polymers-Based Drug Delivery Systems for Cancer Therapy	373
	<i>Ibrahim M. El-Sherbiny, Nancy M. El-Baz and Amr H. Mohamed</i>	
16.1	Introduction	373
16.1.1	Cancer-Targeted Therapy	376
16.2	Selection Considerations of Polymers for Drug Delivery	377
16.2.1	Biodegradability	377
16.2.2	Biocompatibility	379
16.2.3	Surface Modification	379
16.3	Types of Biodegradable Polymers	381
16.3.1	Natural Biodegradable Polymers	381
16.3.1.1	Protein-Based Biodegradable Polymers	381
16.3.1.2	Polysaccharides-Based Biodegradable Polymers	382
16.3.2	Synthetic Biodegradable Polymers	384
16.3.2.1	Polyesters	384
16.4	Preparation Methods of Biodegradable Polymeric Carriers	387
16.4.1	Polymer Dispersion	388
16.4.1.1	Emulsion-Solvent Evaporation Method	388
16.4.1.2	Double Emulsion Method	389
16.4.1.3	Nanoprecipitation	389
16.4.1.4	Salting Out	389

16.4.2	Polymerization	389
16.4.2.1	Emulsion Polymerization	390
16.4.2.2	Microemulsion Polymerization	390
16.4.3	Ionic Gelation	390
16.4.4	Spray Drying	391
16.5	Recent Applications of Biodegradable Polymers-Based Targeted Drug Delivery for Cancer Therapy	391
16.5.1	Passive Cancer-Targeted Delivery	392
16.5.1.1	Stealth Liposomes and Nanoparticles	393
16.5.2	Active Cancer-Targeted Drug Delivery Systems	395
16.5.3	Stimuli-Responsive Polymeric Drug Delivery	396
16.6	Conclusion	400
	References	400
