

Refractory Engineering

Materials – Design – Construction

VULKAN-VERLAG ESSEN

Table of Contents

Preface	V
1. Introduction	1
2. Materials in Refractory Engineering	3
2.1 General	3
2.2 Shaped Dense Materials	5
2.2.1 Refractory Bricks Based on $\text{SiO}_2\text{-Al}_2\text{O}_3$ System	5
2.2.1.1 Silica Bricks	6
2.2.1.2 Fireclay Bricks	9
2.2.1.3 High-Alumina Bricks	10
2.2.2 Basic Refractory Bricks	13
2.2.2.1 Magnesite Bricks	14
2.2.2.2 Chrome-Magnesite and Magnesite-Chrome Bricks	15
2.2.2.3 Chromite Bricks	16
2.2.2.4 Forsterite Bricks	17
2.2.2.5 Dolomite Bricks	17
2.2.3 Refractory Bricks Based on $\text{ZrO}_2\text{-SiO}_2$ System	18
2.2.4 Non-Oxidic Refractory Bricks	19
2.2.4.1 Carbon Bricks	20
2.2.4.2 Silicon Carbide Bricks	20
2.2.5 Electrically Fusion Products	21
2.2.5.1 Fusion Cast Products	22
2.2.5.2 Sink Fused Products	24
2.3 Shaped Heat-Insulating Materials	24
2.3.1 General	24
2.3.2 Insulating Refractory and Insulating Bricks	26
2.3.2.1 Insulating Refractory Bricks	32
2.3.2.2 Insulating Bricks	33
2.3.3 Plates and Shaped Parts	35
2.3.3.1 Vermiculite Plates and Shaped Parts	35
2.3.3.2 Calcium Silicate Plates and Shaped Parts	35
2.3.3.3 Plates and Shaped Parts out of Microporous Insulation Materials	37

2.4	Unshaped Refractory Materials (Monolithics)	38
2.4.1	General	38
2.4.2	Insulating Refractory and Refractory Castables	39
2.4.2.1	Hydraulically Setting Refractory Castables	39
2.4.2.2	Chemically Setting Refractory Castables	40
2.4.2.3	Low-Cement Refractory Castables	40
2.4.3	Plastic Mixes	40
2.4.4	Ramming Mixes	40
2.4.5	Dry Mixes	40
2.4.6	Hot Repair Mixes	40
2.4.7	Jointing Materials	40
2.4.7.1	Refractory Mortars	40
2.4.7.2	Refractory Mastics	41
2.5	Ceramic Fiber Materials	41
2.5.1	General	41
2.5.2	Manufacture	41
2.5.3	Forms of Delivery	41
2.5.4	Classification Temperature and Service Limits	43
2.6	Metals	44
2.6.1	General	44
2.6.2	Definitions	44
2.6.3	Characteristic Behavior	45
2.6.3.1	Creep Strength Properties	45
2.6.3.2	Thermal Expansion	45
2.6.3.3	Sigma Phase Embrittlement	45
2.6.3.4	Oxidation	46
2.6.3.5	Behavior upon Contact with Contaminants	46
2.6.4	Selection Criteria and Application	49
2.7	Surface Protection	49
2.7.1	General	49
2.7.2	Protection of Metallic Surfaces	49
2.7.3	Protection of Ceramic Surfaces	50
2.8	Other Materials	50
2.8.1	Wall Tiles and Sand-Lime Bricks	50
2.8.2	Castables with Calcium-Silicate Cements	50
2.8.3	Fused Cast Basalt	50
2.8.4	Expansion Joint and Burnout Materials	51
2.8.5	Filler Materials	52
2.8.6	Separation Layers	52
2.8.7	Mixing Water for Castables and Mortar	53
2.8.7.1	General	53
2.8.7.2	Evaluation Criteria	54
2.8.7.3	Water Hardness	54
2.8.7.4	Natural and "Artificial" Water	54
2.9	Transport, Packaging, Storage of Refractory Materials	55
2.9.1	Transport	55
2.9.2	Packaging	55
2.9.3	Storage	58

3. Design	59
3.1 General	59
3.2 Preparation	59
3.2.1 Recording of Operation Data	59
3.2.2 Selection Criteria for Refractory and Heat-Insulation Materials	60
3.2.3 Regulations and Conditions on Site	61
3.3 Design with Shaped Dense Materials	61
3.3.1 General	61
3.3.2 Standard Shapes	61
3.3.3 Shaped Bricks	68
3.3.4 Anchorings	70
3.3.5 Joints	71
3.3.6 Designation of Courses and Bonds	75
3.3.7 Design Examples	77
3.4 Design with Shaped Heat-Insulating Materials	100
3.4.1 Standard Shapes	100
3.4.2 Shaped Bricks	100
3.4.3 Anchoring	100
3.4.4 Joints	103
3.4.5 Design Examples	104
3.5 Design with Unshaped (Monolithic) Refractory Materials	113
3.5.1 General	113
3.5.2 Anchoring	113
3.5.3 Joints	119
3.5.4 Design Examples	120
3.5.5 Lining of Cylindrical Vessels	128
3.6 Design with Ceramic Fiber Materials	129
3.6.1 Forms of Delivery	129
3.6.2 Anchoring	130
3.6.3 Design and Application Examples	131
3.7 Thermal Calculations	138
3.7.1 General	138
3.7.2 Heat Transfer	139
3.7.2.1 Heat Conduction	139
3.7.2.1.1 Heat Conduction in a Level and Single Layer Wall	140
3.7.2.1.2 Heat Conduction in a Level and Multi-Layer Wall	141
3.7.2.1.3 Heat Conduction in a Cylindrical Pipe Wall	142
3.7.2.2 Heat Transfer (Transition)	143
3.7.2.2.1 Heat Transfer (Transition) by Convection	143
3.7.2.2.2 Heat Transfer (Transition) by Radiation	144
3.7.2.3 Heat Flux (Flow)	146
3.7.2.3.1 Heat Flux through a Level and Single Layer Wall	146
3.7.2.3.2 Heat Flux through a Level and Multi-Layer Wall	147
3.7.2.3.3 Heat Flux through a Multi-Layer, Cylindrical Pipe Wall	149
3.7.3 Practical Information	152
3.7.3.1 Definition	152
3.7.3.1.1 Thermal Conductivity	152

3.7.3.1.2	Radiation Coefficient	152
3.7.3.1.3	Heat Transfer Coefficient	152
3.7.3.2	Heat Flux through Various Wall Designs	154
3.7.3.3	Heat Flux through Extremely Thin Walls	157
3.7.3.4	Heat Flux with Extremely Low Outside Wall Temperatures	157
3.7.3.5	Subsequent Heat Insulation in Existing Units	157
3.7.3.5.1	Additional Heat Insulation on the Outside	157
3.7.3.5.2	Additional Heat Insulation on the Inside	157
3.7.4	Calculation Examples	159
3.7.4.1	Calculation Example without Computer Assistance	159
3.7.4.2	Calculation Example with Computer Assistance	163
3.8	Static Calculations of Load-Bearing Parts Taking the Temperature Influence into Consideration	164
3.8.1	General	164
3.8.2	Heating-Up Speed	166
3.8.3	Layer (Course) Stress	171
3.8.4	Beams	174
3.8.5	Crowns and Arches	175
3.8.6	Domes	178
3.8.7	Shaft Furnaces/Kilns	180
3.9	Expansion Calculations	183
4.	Working/Application	187
4.1	General	187
4.2	Preparation for Working	187
4.2.1	Documents and Data	187
4.2.2	Working Record and Working Schedule	188
4.2.3	Work Schedules for Personnel	191
4.2.4	Equipment on Construction Site	191
4.2.5	Schedule for Preparing Construction Site	194
4.2.6	Start of Work on Construction Site	194
4.3	Shaped Dense and Heat-Insulating Materials	195
4.3.1	General	195
4.3.2	Basic Guidelines for Refractory Brickwork	196
4.3.3	Wall Brickwork	197
4.3.4	Bottoms	197
4.3.4.1	General	197
4.3.4.2	Installation of Large-Shaped Bottom Bricks in Hearth-Type Furnaces	199
4.3.4.3	Bottoms out of Carbon or Graphite Bricks	199
4.3.4.4	Installation of Large-Shaped Bottom Bricks in Glassmaking Furnaces	200
4.3.5	Suspended Roofs	201
4.3.6	Piping	202
4.3.7	Rotary Kilns	202
4.3.7.1	General	202
4.3.7.2	Work Preparation	204
4.3.7.3	Breakout of the Lining	204

4.3.7.4	General Instructions for the Preparation and Use	205
4.3.7.5	Jack Method	208
4.3.7.6	Gluing Method	209
4.3.7.7	Kiln Rig	210
4.3.8	Crowns and Arches	212
4.3.8.1	Installation of a Flat Crown Taking a Tier-Roasting Furnace as Example	212
4.3.8.2	Other Crowns and Arches	213
4.4	Unshaped (Monolithic) Refractory Materials	213
4.4.1	Supply and Storage	213
4.4.1.1	Insulating Refractory and Refractory Castables	213
4.4.1.2	Plastic and Ramming Mixes	213
4.4.2	Mixing	213
4.4.2.1	Insulating Refractory and Refractory Castables	213
4.4.2.2	Plastic and Ramming Mixes	215
4.4.2.3	Summer and Winter Conditions	215
4.4.3	Working	217
4.4.3.1	Insulating Refractory and Refractory Castables	217
4.4.3.2	Gunning	220
4.4.3.3	Plastic and Ramming Mixes	222
4.4.4	Removal of Templates/Molds	225
4.4.4.1	Insulating Refractory and Refractory Castables	225
4.4.4.2	Plastic and Ramming Mixes	225
4.4.5	Subsequent Treatment/Finishing	225
4.4.5.1	Insulating Refractory and Refractory Castables	225
4.4.5.2	Plastic and Ramming Mixes	225
4.4.6	Lining of Studded Pipe Walls	225
4.4.6.1	General	225
4.4.6.2	Lining by Hand and by Machine	226
4.4.6.3	Subsequent Treatment/Finishing	227
4.4.6.4	Repairs	227
4.4.7	Warm and Hot Gunning Repairs	228
4.5	Ceramic Fiber Materials	229
4.5.1	General	229
4.5.2	Veneering	229
4.5.3	Layer Design	230
4.5.4	Fiber Modules	231
4.5.5	Gunning	231
4.5.6	Coatings	232
4.6	Metallic Materials	232
4.6.1	General	232
4.6.2	Arc Stud Welding	232
4.6.2.1	Method	232
4.6.2.2	Shape of the Studs	233
4.6.2.3	Welding Positions	233
4.6.2.4	Work Piece Thickness	233
4.6.2.5	Equipment	233
4.6.2.6	Design of the Stud Weld Joints	235

4.6.2.7	Practical Information	235
4.6.2.8	Check of the Stud Weld Joints	236
4.7	Anchoring	239
5.	Drying, Heating, Heating-Up and Cooling-Down	241
5.1	General	241
5.2	Processes During Drying	241
5.2.1	General	241
5.2.2	Processes Viewed Separately	242
5.2.3	Drying Process as a Whole	246
5.3	Recommendations	247
5.3.1	General	247
5.3.2	Refractory Castables	247
5.3.3	Plastic Mixes	248
5.3.4	Brickwork	248
5.3.5	Mixed Lining	248
5.4	Temperature Measurement	250
5.5	Practical Examples	251
6.	Hazardous Materials/Substances and Disposal	259
6.1	Important Requirements in the Hazardous Material/Substances Regulations	259
6.2	Hazardous Material/Substance Groups	260
6.2.1	Shaped and Unshaped (Monolithic) Refractory Materials	260
6.2.2	Materials Containing Solvents	261
6.2.3	Fiber Materials	261
6.2.4	Breakout and Teardown Materials	261
6.3	Safety Data Sheets	262
6.4	Company Directive	265
6.5	Breakout and Disposal	265
6.5.1	Breakout of Contaminated Materials	265
6.5.2	Disposal	265
6.5.2.1	Disposal of Residual Construction Materials.....	267
6.5.2.2	Disposal of Breakout and Teardown Materials.....	268
6.6	Disposal of Leftover Packaging Materials	268
7.	Quality Assurance	271
7.1	Sampling and Inspection	271
7.1.1	General	271
7.1.2	Terminology / Glossary	272
7.1.3	Sampling and Inspection of Shaped Refractory Materials	274
7.1.3.1	Inspection by Attributes or Good/Bad Inspection	275
7.1.3.2	Inspection by Variables	278
7.1.4	Sampling and Inspection of Unshaped (Monolithic) Refractory Materials	283

Appendices	
A.1 Terminology / Glossary	285
A.2 Standards, Regulations, Codes of Practice and Material Sheets	301
A.2.1 General	301
A.2.2 DIN Standards	301
A.2.3 ISO Standards	308
A.2.4 DIN-ISO Standards	309
A.2.5 PRE Recommendations and Codes of Practice	309
A.2.6 Iron and Steel Codes of Practice	310
A.2.7 ASTM Standards	310
A.2.8 ZH-1 Guidelines and Information Sheets Covering Accident Prevention	314
A.2.9 Others	317
A.3 Code Number Key for Unshaped (Monolithic) Refractory and Heat-Resistant Materials	319
A.4 Bibliography	329
A.5 Authors	333
A.6 Index	337
