

Manfred Knebusch

Specialization of Quadratic and Symmetric Bilinear Forms

Translated by Thomas Unger

 Springer

Contents

1	Fundamentals of Specialization Theory	1
1.1	Introduction: on the Problem of Specialization of Quadratic and Bilinear Forms	1
1.2	An Elementary Treatise on Symmetric Bilinear Forms	3
1.3	Specialization of Symmetric Bilinear Forms	7
1.4	Generic Splitting in Characteristic $\neq 2$	16
1.5	An Elementary Treatise on Quadratic Modules	22
1.6	Quadratic Modules over Valuation Rings	26
1.7	Weak Specialization	36
1.8	Good Reduction	48
2	Generic Splitting Theory	55
2.1	Generic Splitting of Regular Quadratic Forms	55
2.2	Separable Splitting	62
2.3	Fair Reduction and Weak Obedience	65
2.4	Unified Theory of Generic Splitting	75
2.5	Regular Generic Splitting Towers and Base Extension	79
2.6	Generic Splitting Towers of a Specialized Form	86
3	Some Applications	91
3.1	Subforms which have Bad Reduction	91
3.2	Some Forms of Height 1	96
3.3	The Subform Theorem	103
3.4	Milnor's Exact Sequence	108
3.5	A Norm Theorem	113
3.6	Strongly Multiplicative Forms	118
3.7	Divisibility by Pfister Forms	125
3.8	Pfister Neighbours and Excellent Forms	133
3.9	Regular Forms of Height 1	138
3.10	Some Open Problems in Characteristic 2	141
3.11	Leading Form and Degree Function	144

3.12	The Companion Form of an Odd-dimensional Regular Form	151
3.13	Definability of the Leading Form over the Base Field	158
4	Specialization with Respect to Quadratic Places	165
4.1	Quadratic Places; Specialization of Bilinear Forms	165
4.2	Almost Good Reduction with Respect to Extensions of Quadratic Places	170
4.3	Realization of Quadratic Places; Generic Splitting of Specialized Forms in Characteristic $\neq 2$	172
4.4	Stably Conservative Reduction of Quadratic Forms	175
4.5	Generic Splitting of Stably Conservative Specialized Quadratic Forms	181
