

CONTENTS

Preface	v
Introduction	1
I. Complexation Reactions	3
A. Terminology and General Considerations	3
B. Complexation Ability of Metals	6
C. Complexation Ability of Ligands	12
D. Rates of Complexation Reactions	15
II. Complex Equilibria	22
A. General Laws of Equilibria	22
1. Law of Mass Action	22
2. Mononuclear Complexes	28
3. Polynuclear Complexes	31
B. Conditional Constants	35
1. Definitions	35
2. Calculation of Conditional Constants	38
3. Acid and Basic Complexes	43
4. Mixed Complexes	54
5. Complexes with Metal and Ligand Combined in Different Ratios	56
III. Masking	61
A. Masking of Complexation Reactions	61
B. Masking of Precipitation Reactions	67
C. Masking of Redox Reactions	71
IV. Complexometric Titrations	75
A. Titration Curves	75
B. Titration Error	77
C. Detection of the End Point	82
1. Visual Methods for Detecting the End Point	82
2. Instrumental Methods for Detecting the End Point	100
D. Simultaneous Titrations	124
1. Stepwise Titrations	124
2. Back Titrations	136
3. Replacement Titrations	141
E. Masking and Demasking in Complexometric Titrations	144
V. Acid-Base Titrations	160
A. Introduction	160
B. Equilibrium Constants	161
C. pH Calculations	162
D. Titrations	169
1. Monobasic Acids and Monoacid Bases	169
2. Polybasic Acids and Polyacid Bases	170
3. Several Acids and Bases	175

4. Titration of Very Weak Acids.....	179
5. Titration of Very Weak Bases.....	187
6. Titration of Mixtures of Acids and Bases.....	188
E. Concluding Remarks.....	193
VI. Complexation in Ion Exchange Analysis.....	195
A. Fundamental Equilibrium Equations.....	195
B. Equilibria in the Presence of Complexing Agents.....	206
C. Ion Exchange Techniques.....	209
1. Batch Operations.....	209
2. Column Operations.....	219
(a) General Column Theory.....	220
(b) Column Filtration Methods.....	229
(c) Fractional Elution Methods.....	252
D. Concluding Remarks.....	255
VII. Complexation in Metal Extraction Analysis.....	259
A. General Extraction Theory.....	259
B. Conditional Extraction Constants.....	261
C. Completeness of Extractions.....	265
D. Applications.....	267
E. Concluding Remarks.....	272
VIII. Complexation in Electrochemical Analysis.....	274
IX. Complexation in Photometric Analysis.....	281
A. Errors in Photometric Analysis.....	281
B. Completeness of Reaction.....	283
C. Interference of Side Reactions.....	285
Appendix: Tables of Constants.....	293
A.1. Stability Constants of Acids.....	294
A.2. Stability Constants of Metal Complexes.....	298
A.3. Solubility Products of Sparingly Soluble Metal Salts...	339
A.4. Logarithmic Values of $\alpha_{L(H)}$ for Ligands.....	348
A.5. Logarithmic Values of $\alpha_{M(L)}$ for Various Metals and Ligands.....	352
A.6. Logarithmic Conditional Stability Constants of Metal- EDTA Complexes.....	360
A.7. Transition Points of Metal Indicators.....	361
A.8. pH Ranges of Acid-Base Indicators.....	372
A.9. Extraction Constants.....	373
Author Index.....	375
Subject Index.....	385
