Connective Real K -Theory of Finite Groups

Robert R. Bruner
J. P. C. Greenlees

American Mathematical Society
Providence, Rhode Island

Contents

Chapter 1. Introduction	1
1.1. Motivation	1
1.2. Forms of K -theory	2
1.3. The complex case	4
1.4. Highlights of Chapter 2	6
1.5. Highlights of Chapter 3	7
1.6. Highlights of Chapter 4	7
1.7. Highlights of Chapter 5	8
1.8. Highlights of Chapter 6	9
1.9. Highlights of Chapter 7	10
1.10. Highlights of Chapter 8	11
1.11. Highlights for elementary abelian groups	11
1.12. Conclusions	13
1.13. History and comparisons with other methods	13
1.14. Comparisons with other theories	15
1.15. Prerequisites	16
1.16. Reading this book	17
1.17. Thanks	17
Chapter 2. K -Theory with Reality	19
2.1. Representation theory	19
2.2. The periodic case	21
2.3. Clifford modules	24
2.4. The connective case	30
2.5. The local cohomology and completion theorems	32
2.6. Calculations	34
2.7. The local cohomology theorem and positive scalar curvature	35
2.8. Periodic K -theory and maps into classical fibrations	36
2.9. Near the edge of periodicity	41
Chapter 3. Descent, Twisting and Periodicity	49
3.1. Fixed points, homotopy fixed points and geometric fixed points	49
3.2. Descent	50
3.3. Statement of periodicity for equivariant connective real K -theory	52
3.4. Periodicity for connective real K -theory	54
3.5. Twistings of $k\mathbb{R}$	56
3.6. Splittings	60
3.7. The $RO(Q)$ -graded homotopy of $k\mathbb{R}$	61
3.8. Six truncations of the periodic Tate spectral sequence	63
3.9. Three twists of the homotopy fixed point spectral sequence	66

3.10. Three twists of the homotopy orbit spectral sequence	67
Chapter 4. The Bockstein Spectral Sequence	71
4.1. Constructions	71
4.2. The periodic case	77
4.3. The connective case	79
Chapter 5. Characteristic Classes	83
5.1. Preliminaries	83
5.2. Tori	84
5.3. Symplectic groups	85
5.4. Special unitary groups	93
5.5. Unitary groups	93
5.6. Orthogonal groups	95
5.7. Special orthogonal groups	113
Chapter 6. Examples for Cohomology	115
6.1. Description of the method	115
6.2. The conclusion	115
6.3. Cyclic groups	117
6.4. Quaternion groups	118
6.5. Klein 4-group	125
6.6. The alternating group A_4	126
Chapter 7. Examples for Homology	131
7.1. Comparison of methods	131
7.2. Our preferred method	132
7.3. Cyclic groups	132
7.4. The quaternion group of order 8	136
7.5. The quaternion group of order 16	138
7.6. Klein 4-group	140
7.7. The alternating group A_4	141
Chapter 8. Dihedral Groups	147
8.1. Recollections	147
8.2. The real equivariant connective K -theory, ko_D^*	148
8.3. Representation theory	154
8.4. The ku -homology of D , $ku_*(BD)$	164
8.5. The ko -homology of D , $ko_*(BD)$	167
Chapter 9. The ko -Cohomology of Elementary Abelian 2-Groups	177
9.1. Summary of calculations	177
9.2. Recollections about ku^*BV	177
9.3. Deducing ko_V^*	178
9.4. Homology of QU	179
9.5. The J -adic filtration for elementary abelian 2-groups	179
9.6. The action of Sq^2 on PC	181
9.7. The action of Sq^2 on TU	182
9.8. The action of Sq^2 on the resolution of TU_n	183
9.9. Module pictures	185

9.10.	The Sq^2 -homology of TU	187
9.11.	Bockstein spectral sequence and the torsion part	190
9.12.	Bockstein spectral sequence charts	192
Chapter 10.	The ko -Homology of Elementary Abelian Groups (BSS)	201
10.1.	The behaviour of the spectral sequence	201
10.2.	The calculation	203
10.3.	Bockstein spectral sequence charts	206
Chapter 11.	The Structure of TO	213
11.1.	Cycles in $PC[Sq^2]$	213
11.2.	Cycles in PC	215
11.3.	Minimal generating sets for TO_n	216
11.4.	The resolution of TO_{r-1}	218
11.5.	The resolution of TO_{r-2}	221
11.6.	An exact sequence for TO_{r-k}	229
11.7.	The maps in the resolution	231
Chapter 12.	The ko -Homology of Elementary Abelian Groups (LCSS)	235
12.1.	The local cohomology of ko_V^*	235
12.2.	Calculation of $ko_*(BV)$ in rank 1	236
12.3.	Calculation of $ko_*(BV)$ in rank 2	238
12.4.	Calculation of $ko_*(BV)$ in rank 3	241
12.5.	Calculation of $ko_*(BV)$ in rank 4	250
12.6.	Discussion of the results	282
Appendix A.	Ext Charts	285
A.1.	Introduction	285
A.2.	The trivial module	288
A.3.	The integral Eilenberg-MacLane spectrum	289
A.4.	The augmentation ideal	289
A.5.	The Postnikov tower for ko	290
A.6.	The inverted question mark	292
A.7.	The question mark	293
A.8.	Joker	294
A.9.	Projective space	294
A.10.	$\eta - c - R$ sequence in Ext	299
Appendix B.	Conventions	303
B.1.	General conventions	303
Appendix C.	Indices	305
C.1.	Some recurrent notation	305
C.2.	Index of calculations	305
C.3.	Index of symbols	306
C.4.	Index of notation	306
C.5.	Index of terminology	312
Bibliography		315
