

CONTENTS

PREFACE	v
CHAPTER 1: ANALYSIS OF VARIANCE	1
1.1. The Partition of a Sum of Squares Corrected by the Mean	1
1.2. Normal Theory of Distribution Problems	20
1.3. Testing the Hypothesis on Regression Coefficients	37
1.4. General Linear Hypotheses	43
1.5. Analysis of Variance in an m-Way Classification Design	53
1.6. Analysis of Variance in a Two-Way Classification in Matrix Language	75
References	82
CHAPTER 2: DESIGN OF EXPERIMENTS	83
2.1. General Remarks	83
2.2. Randomization	84
2.3. Randomized Block Design	85
2.4. Latin-Square Design, Greco-Latin Square Design	106
2.5. Randomization in Latin-Square Design	113
2.6. Appendix: Calculation of the Variance of $\pi'T\pi$ with Respect to Its Permutation Distribution Due to Randomization	131
References	160
CHAPTER 3: FACTORIAL DESIGN	161
3.1. Need for the Factorial Principle	161
3.2. 2^n Factorial Designs	163
3.3. 3^n Factorial Designs	172
3.4. Fractional Replication of a Factorial Design	177
3.5. Confounding	192
References	201
CHAPTER 4: THEORY OF BLOCK DESIGNS -- INTRABLOCK ANALYSIS	202
4.1. Linear Estimation	202
4.2. General Block Designs	208
4.3. Partition of Degrees of Freedom and Sum of Squares	217
4.4. Balanced Incomplete Block Design	223
4.5. Randomization of a Balanced Incomplete Block Design	236

4.6. The Lattice Design	245
4.7. Partially Balanced Incomplete Block Design	250
4.8. Partially Balanced Incomplete Block Design with Two Associate Classes	258
4.9. Analysis of Variance of Partially Balanced Incomplete Block Design	266
4.10. Association Algebra and Relationship Algebra of a Partially Balanced Incomplete Block Design	278
4.11. Partially Balanced Incomplete Block Design for the Factorial Combination of Two Factors	292
References	302
CHAPTER 5: THEORY OF BLOCK DESIGNS -- INTERBLOCK ANALYSIS	303
5.1. Preliminaries	303
5.2. Interblock Analysis	310
5.3. Application to Special Designs	324
5.4. Analysis of Variance	332
CHAPTER 6: RANDOMIZATION OF PARTIALLY BALANCED INCOMPLETE BLOCK DESIGNS	
6.1. The Null Distribution of the F-Statistic for Testing a Partial Null Hypothesis in a PBIB design with m Associate Classes under the Neyman Model before the Randomization	338
6.2. Calculation of the Exact Moments of $\bar{\theta}$ and $\bar{\theta}^2$ with Respect to the Permutation Distribution Due to Randomization	347
6.3. Heuristic Derivation of the Asymptotic Null Distribution of the F-Statistic after Randomization	359
6.4. Asymptotic Equivalence of Probability Distributions	366
6.5. Rigorous Derivation of the Asymptotic Null Distribution of the F-Statistic after Randomization	380
6.6. The Asymptotic Non Null Distribution of the F-Statistic for Testing a Partial Null Hypothesis in a Randomized PBIB design with m Associate Classes under the Neyman Model	403
6.7. Appendix	435
Reference	446
BIBLIOGRAPHY	447
INDEX	463
