

CONTENTS

Preface		v
1 Introduction		
1.1 Spatial point patterns		1
1.2 Sampling		3
1.3 Complete spatial randomness		4
1.4 Objectives of statistical analysis		5
1.5 The Dirichlet tessellation		6
1.6 Monte Carlo tests		7
2 Preliminary testing for mapped patterns		
2.1 Tests of complete spatial randomness		10
2.2 Inter-event distances		11
2.3 Nearest neighbour distances		16
2.4 Point to nearest event distances		20
2.5 Quadrat counts		23
2.6 Recommendations		25
2.7 Scales of pattern		26
3 Analysis of sparsely sampled patterns		
3.1 General remarks		31
3.2 Quadrat counts		32
3.3 Distance measurements		35
3.4 Recommendations		44
4 Spatial point processes		
4.1 Processes and summary descriptions		46
4.2 The Poisson process		50

4.3	Simulating the Poisson process	51
4.4	The inhomogeneous Poisson process	52
4.5	Contagious distributions	53
4.6	Poisson cluster processes	55
4.7	Cox processes	57
4.8	Simple inhibition processes	60
4.9	Markov point processes	63
4.10	Thinned processes	67
4.11	Lattice-based processes	67
4.12	Concluding remarks	68
5	Analysis of mapped patterns	
5.1	Introduction	70
5.2	Unbiased estimation of $K(t)$, $G(y)$ and $F(x)$	71
5.3	Parameter estimation	73
5.4	Goodness of fit	76
5.5	Analysis of redwood seedlings	78
5.6	Analysis of biological cells	81
5.7	Analysis of bramble canes	83
5.8	Recommendations	88
6	Multivariate spatial point processes	
6.1	Processes and summary descriptions	90
6.2	Processes with independent components	92
6.3	Marked point processes	93
6.4	Bivariate Poisson processes	93
6.5	Bivariate thinned processes	95
6.6	Bivariate Cox processes	96
6.7	Bivariate Markov point processes	100
7	Analysis of multivariate patterns	
7.1	Tests of independence for sparsely sampled patterns	104
7.2	Mapped patterns	107
7.3	Analysis of hamster tumour	109
7.4	Analysis of bramble canes	113
7.5	Analysis of Lansing Woods	117
	References	122
