

Contents

Small (3- and 4-membered) and medium (especially 7-membered) rings	1
D. R. Marshall, <i>University College of North Wales, Bangor</i>	
Nitrogen heterocyclic molecules, part 1. Pyrroles, indoles, isoindoles, indolizines and cyclazines	29
R. Alan Jones, <i>University of East Anglia, Norwich</i>	
Nitrogen heterocyclic molecules, part 2. Azoles and benzazoles	55
M. R. Grimmett, <i>University of Otago, Dunedin, New Zealand</i>	
Nitrogen heterocyclic molecules, part 3. The monocyclic azines	89
B. R. T. Keene, <i>Medway and Maidstone College of Technology, Chatham, Kent</i>	
Nitrogen heterocyclic molecules, part 4. Benzazines (quinolines, isoquinolines, quinolizinium compounds, cinnolines, quinazolines, quinoxalines, phthalazines, benzotriazines)	137
W. L. F. Armarego, <i>Australian National University, Canberra</i>	
Nitrogen heterocyclic molecules, part 5. Naphthyridines and polyazaheteroaromatic compounds	167
D. G. Wibberley, <i>University of Aston in Birmingham</i>	
Oxygen heterocyclic molecules	203
A. Pelter, <i>University College of Swansea</i>	
Aromatic sulphur heterocycles	239
W. Carruthers, <i>University of Exeter</i>	
Heterocyclic compounds containing both nitrogen and oxygen, and nitrogen and sulphur	263
R. M. Scrowston, <i>University of Hull</i>	

Saturated and partially saturated systems with bridge-head nitrogen atoms and saturated five- and six-membered ring heterocyclic compounds	291
Trevor A. Crabb, <i>Portsmouth Polytechnic</i>	
Macromolecules derived from pyrroles	319
K. M. Smith, <i>University of Liverpool</i>
