

TABLE OF CONTENTS

FOREWORD	V
PREFACE	XI
Chapter I: GENERAL INFORMATION ON PLATINUM METALS	1
Position in the periodic system of elements	1
Stable and radioactive isotopes	4
Natural occurrence of the platinum metals. Minerals and ores	6
Natural and industrial objects of chemical analysis	10
Chapter II: CHEMICO-ANALYTICAL CHARACTERISTICS OF THE ELEMENTS AND THEIR COMPOUNDS	12
Physical properties of the platinum metals	12
Behavior of the platinum metals in acids, bases, halogens, and other reagents. Dissolving techniques	14
Redox reactions in hydrochloric, sulfuric and perchloric acids and alkaline solutions	22
Major chemical compounds used in analysis	41
Simple and complex halides	41
Oxides, hydroxides, oxo compounds	87
Perchlorates	97
Sulfates	102
Nitrates	108
Sulfides	112
Thiocyanates	116
Nitrites	119
Complex ammines	123
Cyanides	127
Compounds of platinum metals with Sn(II).	129
Complex compounds with organic reagents	132
Chapter III: QUALITATIVE ANALYSIS OF PLATINUM METALS	154
Ruthenium	155
Osmium	157
Rhodium	158
Iridium	159
Palladium	160
Platinum	163

Chapter IV:	DETERMINATION OF PLATINUM METALS	167
	Gravimetric methods	167
	Ruthenium	169
	Osmium	172
	Rhodium	176
	Iridium	182
	Palladium	187
	Platinum	209
	Titrimetric methods	216
	Ruthenium	218
	Osmium	221
	Rhodium	226
	Iridium	232
	Palladium	235
	Platinum	246
	Spectrophotometric methods	252
	Ruthenium	253
	Osmium	266
	Rhodium	281
	Iridium	294
	Palladium	302
	Platinum	334
	Fluorimetric methods	344
	Ruthenium	344
	Osmium, iridium, palladium, and platinum	345
	Spectroscopy	346
	Emission spectroscopy	347
	Atomic absorption analysis	351
	X-ray spectroscopy	369
	Electrochemical methods	370
	Polarographic methods	370
	Coulometric methods	395
	Other electrochemical methods	404
	Radioactivation methods	404
	Kinetic methods	407
Chapter V:	SEPARATION METHODS FOR THE PLATINUM METALS	413
	Separation methods based on distillation	414
	Methods for the separation of palladium, platinum, rhodium, and iridium based on precipitation reactions	421
	Extraction methods	434
	Group separation methods	436
	Separation methods for binary mixtures and selective extraction of individual metals from complex mixtures	441
	Separation of multicomponent systems of platinum metals	452
	Ion exchange chromatography in a column	456
	Chromatography	466
Chapter VI:	CONCENTRATION OF THE PLATINUM METALS AND THEIR SEPARATION FROM ASSOCIATED ELEMENTS	488
	Assay enrichment	489
	Chemical and physiochemical concentrating methods	496

Chapter VII:	ANALYSIS OF NATURAL AND INDUSTRIAL OBJECTS CONTAINING PLATINUM METALS. ANALYSIS OF PURE METALS	515
	Analytical methods for copper-nickel sulfide ores, meteorites, minerals and other "lean" natural and industrial objects con- taining micro and submicro amounts of platinum metals	515
	Chemical and assay-chemical methods	516
	Assay-spectroscopic methods	533
	Chemical-spectroscopic methods	540
	Radioactivation methods	542
	Analytical methods for "rich" industrial materials, platinum concentrates, alluvial platinum and certain minerals of the platinum metals	549
	Assay-chemical and chemical methods for analyzing "enriched" materials	550
	Emission spectroscopy of concentrates and other "enriched" materials	558
	X-ray microspectroscopy of minerals	558
	X-ray spectroscopy of concentrates and other "enriched" materials	562
	Analysis of pure metals	563
	Spectroscopic determinations of impurities	563
	Determination of impurities by radioactivation methods	579
	Chemical analytical methods for refined metals	580
BIBLIOGRAPHY		583
