

Contents—Volume II

PART 1

Editor's Preface to Volume I	vii
XIV. Alkylation of Aromatics with Alkenes and Alkanes by S. H. Patinkin and B. S. Friedman	1
I. Introduction	1
1. Scope	1
2. Reviews	2
3. Commercial Aspects	2
II. Alkylation of Aromatic Hydrocarbons	3
1. Benzene and Its Homologs	3
A. Mechanism	3
B. Orientation	8
a. Polar effects and the role of isomerization and transalkylation	9
b. Steric factors	16
C. Relative Reactivity of Benzene and its Homologs	18
D. Liquid-phase Alkylation with Ethylene, Propene, and Butenes	21
a. Metal halide catalysts	21
b. Protonic acid catalysts	24
c. Boron fluoride complexes	27
E. Vapor-phase Alkylation	30
a. The mechanism of alkylation catalyzed by silica-alumina and other cracking catalysts	30
b. Ethylbenzene production	32
c. Cumene production	35
d. Alkylation with <i>n</i> -butenes	37
F. Alkylation with <i>n</i> -Pentenes and Higher <i>n</i> -Olefins	37
G. Alkylation with Isoolefins	40
a. Steric factors	40
b. Hydride transfer	41
c. Selectivity, isomerization, and transalkylation	43
d. Skeletal isomerization in side chain	44
e. Side reactions involving cleavage and/or polymerization	48
f. Migration of double bond	49
H. Alkylation with Polymers of Isoolefins	50
a. Depolyalkylation	50
b. Intact alkylation	51
I. Alkylation with Polymers of <i>n</i> -Olefins	54
a. Propene polymers	54
b. <i>n</i> -Butene polymers	56
J. Alkylation with Aryl-substituted Olefins	57
a. Styrene	57

	b. α -Methylstyrenes	57
	c. Unconjugated aryl-substituted olefins	58
	d. Polyaryl-substituted olefins	59
	K. Alkylation with Cycloolefins	60
	a. Unbranched cycloolefins	60
	b. Branched cycloolefins	61
	L. Telomerization	64
2.	Halogenated and Nitrated Benzenes	66
	A. Halogenated Benzenes	66
	B. Nitrated Benzenes	68
3.	Polycyclic Aromatic Hydrocarbons	68
	A. Naphthalenes	68
	B. Tetralin and Indane	72
	C. Tricyclics	74
	D. Polyphenyl Derivatives	74
III.	Alkylation of Phenols and Derivatives	75
	1. Theory	75
	2. Phenols, Cresols and Dimethylphenols	77
	A. Thermal Alkylation	77
	B. Alkylation with <i>n</i> -Olefins	78
	a. Ethylene	78
	b. Propene	78
	c. <i>n</i> -Butene and higher	79
	C. Alkylation with Isoolefins	79
	a. Phenol	80
	b. Cresols and dimethylphenols	81
	D. Alkylation with Olefin Polymers	84
	a. Diisobutylene	84
	b. Triisobutylene and tetraisobutylene	85
	c. Polypropenes	86
	E. Alkylation with Cyclic Olefins	86
3.	Halogenated and Nitrated Phenols	88
	A. Halogenated Phenols	88
	B. Nitrophenols	89
4.	Higher Phenols	89
5.	Polyhydric Phenols and Bisphenols	90
6.	Aromatic Ethers	91
7.	Methoxyphenols	93
8.	Halogenated and Nitrated Aromatic Ethers	93
9.	Phenoxide Catalysts	94
IV.	Alkylation of Thiophenols and their Ethers	97
V.	Alkylation of Aromatic Amines	101
VI.	Alkylation of Furans and Thiophenes	104
	1. Furans	104
	2. Thiophenes	105
VII.	Alkylation of Aromatic Acids	109
VIII.	Alkylation with Alkanes and Cycloalkanes	110
	1. Alkanes	110
	2. Cycloalkanes	112

IX. Appendix	116
Alkylation of:	
Benzene (Tables 1-8)	116
Toluene (Tables 9-14)	147
C ₈ Aromatics (Tables 15-19)	159
C ₉ Aromatics and higher (Tables 20-23)	170
Indanes (Table 24)	180
Naphthalene and derivatives (Tables 25-29)	181
Tetralins and halogenated tetralins (Table 30)	187
Polyphenyl hydrocarbons (Table 31)	188
Tricyclic hydrocarbons (Table 32)	190
Halogenated and nitrated benzenes and homologs (Tables 33, 34)	192
Phenol (Tables 35-41)	196
Cresols (Tables 42, 43)	211
Higher phenol homologs (Table 44)	219
Indanols and naphthols (Table 45)	222
Halogenated phenols and nitrophenols (Tables 46, 47)	223
Anisole (Table 48)	226
Higher ethers (Table 49)	228
Halogenated anisoles (Table 50)	231
Polyhydric phenols and bisphenols (Table 51)	232
Methoxyphenols and dimethoxybenzenes (Table 52)	235
Thiophenol (Table 53)	236
Thiophenol homologs and ethers (Table 53A)	237
Aniline (Tables 54, 55)	238
Aniline homologs and derivatives and phenylenediamine (Table 56)	240
Heterocyclic amines (Table 57)	243
Aromatic acids (Table 58)	245
Thiophene (Tables 59-63)	247
Thiophene derivatives (Table 64)	252
Furans, pyrrole, and phenthiazine (Table 65)	253
Aromatics with alkanes (Table 66)	254
Aromatics with cycloalkanes (Table 67)	257
 XV. Alkylation of Aromatics with Dienes and Substituted Alkenes by Robert Koncos and B. S. Friedman	 289
I. Introduction	289
II. Dienes	290
1. Side-chain Structure	290
2. The Effect of Catalysts and Conditions on the Alkenylation Reaction	298
3. Summary	300
III. Unsaturated Halides	300
1. Vinyl Halides	300
A. Monohalides	300
B. Polyhalides	303
C. Side Reactions	305

2.	Allyl Halides	307
A.	Monohalides	307
B.	Polyhalides	312
3.	Miscellaneous Halides	313
4.	Summary.	313
IV.	Unsaturated Alcohols and Ethers	313
1.	Unsaturated Alcohols	313
2.	Unsaturated Ethers	316
3.	Summary.	318
V.	Unsaturated Acids	318
1.	Addition	319
2.	Rearrangement.	323
3.	Replacement	324
4.	Hydrogen Transfer	327
5.	Summary.	327
VI.	Unsaturated Esters.	328
1.	Summary.	331
VII.	Unsaturated Aldehydes	331
VIII.	Unsaturated Ketones	332
1.	Addition	332
2.	Replacement	339
3.	Hydrogen Transfer	340
4.	Miscellaneous Reactions	341
5.	Summary.	342
IX.	Unsaturated Acid Chlorides	342
X.	Unsaturated Nitriles	344
XI.	Miscellaneous Unsaturated Alkylating Agents	345
XII.	Appendix	347
	Alkylation with dienes (Tables I–VIII)	347
	Alkylation with unsaturated halides (Tables IX–XIV)	358
	Alkylation with unsaturated alcohols and ethers (Tables XV–XVII)	368
	Alkylation with unsaturated acids (Tables XVIII–XXII)	373
	Alkylation with unsaturated esters (Tables XXIII–XXVIII)	381
	Alkylation with unsaturated ketones and aldehydes (Tables XXIX–XXXIV)	389
	Alkylation with unsaturated nitriles (Table XXXV)	400
	Alkylation with miscellaneous unsaturated compounds (Tables XXXVI–XXXVIII)	401
XVI.	Alkylation of Aromatics with Alkynes <i>by V. Franzen</i>	413
I.	Alkylation with Acetylene	413
II.	Alkylation with Haloalkynes	415

XVII. Alkylation of Aromatics with Haloalkanes	<i>by Franz A. Drahowzal</i>	417
I. Introduction		417
II. Catalysts and Solvents		417
1. Aluminum Halides		417
2. Gallium Halides		421
3. Boron Trifluoride		422
4. Titanium Tetrachloride		422
5. Antimony Pentachloride		423
6. Zinc Chloride		423
7. Ferric Chloride		424
8. Proton Acids		424
9. Acidic Oxides: Alumina		425
10. Aqueous Metal Halides		425
11. Metal Catalysts (<i>in situ</i> formation of metal halides)		425
A. Aluminum		425
B. Zinc		427
C. Copper		427
D. Other Metals		427
III. Haloalkanes		428
1. Fluorides, Chlorides, Bromides, and Iodides		428
2. Relative Reactivity		428
3. Cyclialkylation with Haloalkanes		428
IV. Aromatic Substrates		431
1. Mono- and Polynuclear Hydrocarbons		431
2. Heterocyclic Compounds		433
3. Effect of Substituents		433
V. Mechanism		436
1. General Considerations		436
2. Carbonium-ion Mechanism or Nucleophilic Displacement of the Alkyl Halide-Catalyst Complex		438
3. The Preferred <i>meta</i> -Position		440
4. Complexes		443
5. Rearrangements accompanying Alkylation		444
VI. Alkylations with Substituted, Polyfunctional Haloalkanes		448
1. Di- and Polyhaloalkanes		449
2. Haloalkenes		454
3. Alkoxyhaloalkanes (Haloalkyl Ethers)		460
4. Haloalkyl Sulfides		465
5. Haloalkyl Amines and Imines		465
6. Haloalkyl Halosilanes		466
7. Haloacyl Halides, Halocarboxylic Acids and Esters		466
8. Unsaturated Halocarboxylic Acids		467
XVIII. Alkylation of Aromatics with Alcohols and Ethers	<i>by Alan Schriesheim</i>	477
I. Introduction		477
II. Consideration of Reaction Mechanisms		479

1. Carbonium-ion Reactions	480
2. Aromatic Substitution	481
A. Alkylation, Isomerization, and Disproportionation	482
B. Conclusions	485
III. Alkylation using Alcohols as Alkylating Agents	486
1. Friedel-Crafts Halides	486
A. Alkylation by Alcohols, using Boron Fluoride	486
a. Alkylation of benzene and phenol and their homologs	488
b. Alkylation of naphthalene and other poly- cyclic aromatics.	494
c. Alkylation of esters	495
d. Miscellaneous	496
B. Alkylation by Alcohols using AlCl_3	497
a. Alkylation of benzene and phenol and their homologs	497
b. Miscellaneous	506
C. Other Halides as Alcohol Alkylation Catalysts	508
a. Zinc chloride	508
b. Ferric chloride	513
c. Stannic chloride and titanium tetrachloride	513
2. Proton-donating Acids	514
A. Alkylation by Alcohols using Sulfuric Acid	517
B. Alkylation by Alcohols using Phosphoric Acid	522
3. Metal Oxides	524
A. Alkylation of Benzene and Phenols by Alcohols	525
B. Alkylation of Naphthalene by Alcohols	527
C. Alkylation of Ammonia by Alcohols	528
D. Alkylation of Amines by Alcohols	531
E. Alkylation of Heterocyclics by Alcohols	533
F. Alkylation of Mercaptans and Hydrogen Sulfide by Alcohols	534
IV. Alkylation using Acyclic Ethers as Alkylating Agents	534
1. Friedel-Crafts Halides	536
A. Alkylation of Benzene and its Homologs by Ethers using Boron Fluoride	536
B. Alkylation of Naphthalene by Ethers using Boron Fluoride	538
C. Alkylation of Phenols by Ethers using Boron Fluoride	539
D. Alkylation of Active Methylene Groups by Ethers using Boron Fluoride	539
2. Metal Oxides	541
A. Alkylation of Benzene and its Homologs by Ethers using Metal Oxides	541
B. Alkylation of Naphthalenes by Ethers using Metal Oxides.	542
C. Alkylation of Phenols by Ethers using Metal Oxides	542

3. Miscellaneous	542
A. Ether Rearrangement	542
V. Alkylation using Cyclic Ethers as Alkylating Agents	543
VI. Appendix	546
Alkylation with alcohols (Tables 1–13)	547
Alkylation with ethers (Tables 14–25)	579
XIX. Alkylation of Aromatics with Aldehydes and Ketones by <i>J. E. Hofmann and A. Schriesheim</i>	597
I. Introduction	597
1. General Mechanism Consideration	598
II. Addition of Ketene to Aromatics	600
III. Addition of Aromatic Aldehydes and Ketones to Aromatics	602
1. Reactions of Benzaldehyde	602
2. Reactions of Aromatic Ketones	607
IV. Condensation of Aldehydes and Ketones with Aromatics	610
1. Reactions of Aldehydes and Ketones	610
A. Aldehydes	610
B. Ketones	613
2. Reactions of Chloral	616
V. Miscellaneous Additions involving Aldehydes and Ketones	621
VI. Appendix	625
XX. Alkylation of Aromatics with Esters of Inorganic Acids and Alkyl Arenesulfonates by Franz A. Drahowzal	641
I. Introduction	641
II. Alkyl Sulfates, Sulfites, Phosphates, Silicates, and Carbon- ates	642
III. Alkyl Borates	643
IV. Alkyl Chloroformates, Hypochlorites, Chlorosulfonates, and Chlorosulfites	644
V. Alkyl Benzenesulfonates	646
VI. Alkyl <i>p</i> -Toluenesulfonates	648
VII. Alkyl Perchlorates	653
VIII. Alkyl Nitrates	656

PART 2

XXI. Haloalkylations by George A. Olah and William S. Tolgyesi	659
I. Introduction	659
II. Haloalkylation of Aromatic Compounds	659
1. Scope	659
2. Catalysts and Solvents	660
3. Chloromethylation	661
A. Hydrocarbons	662
a. Benzene and alkylbenzenes	662
b. Biphenyl, terphenyl, and diphenylmethane	667

c.	Indan	667
d.	Naphthalene and derivatives	667
e.	Anthracene and phenanthrene	669
f.	Miscellaneous hydrocarbons	670
g.	Polymeric hydrocarbons (polystyrenes)	670
B.	Heterocyclic Compounds	671
a.	Furan derivatives	671
b.	Thiophene and derivatives	683
c.	Selenophene derivatives	685
d.	Pyrazoles and isoxazoles	685
e.	Benzofurans and benzopyrans	685
f.	Benzothiophenes	686
g.	Quinolines	686
h.	Pyrimidines	686
i.	Miscellaneous heterocyclic compounds	686
C.	Haloaromatic Compounds	687
a.	Haloarenes	687
b.	Haloaralkanes	699
D.	Phenols and Phenol Ethers	701
E.	Aldehydes and Ketones	712
F.	Nitrogen Compounds	721
a.	Nitroaromatics	721
b.	Amines, amides, imines, and imides	724
c.	Azo compounds	725
G.	Acids and Esters	725
H.	Sulfur Compounds	731
a.	Thiophenol ethers (sulfides)	731
b.	Sultones and sultams	731
I.	Silicon Compounds	734
4.	Bromomethylation	734
5.	Iodomethylation	735
6.	Fluoromethylation	735
7.	Haloethylations, Halopropylations, and Halobutylations	737
A.	With Aldehydes and Haloalkyl Ethers	737
B.	With Haloalkenes	741
C.	With Di- and Polyhaloalkanes	746
D.	With Haloalcohols	752
E.	With Di(chloroalkyl) Sulfates, Haloalkyl Chlorosulfonates, and Haloalkyl- <i>p</i> -tosylates	755
8.	Mechanism	756
A.	Aldehydes and Hydrogen Halides or Haloalkyl Ethers	756
a.	Orientation	756
b.	Rates	759
c.	General aspects of mechanism	762
B.	Haloalkenes	765
C.	Dihaloalkanes	766
D.	Haloalcohols	766
E.	Haloalkyl Esters	766

III. Haloalkylation of Aliphatic Compounds	767
1. Alkanes	767
2. Alkenes	767
3. Ketones and Aldehydes	771
 XXII. Cyclialkylation of Aromatics by <i>L. Ross C. Barclay</i>	785
I. Introduction	785
II. Intramolecular Ring Closure of Aryl-substituted Compounds	786
1. Intramolecular Ring Closure of Aryl-substituted Halides	786
2. Intramolecular Ring Closure of Arylalkenes	793
A. Cyclialkylations producing Polynuclear Hydrocarbons and Derivatives. The Mechanism of the Ring Closure	793
B. Cyclialkylations of Unsaturated Carbonyl Compounds	805
C. Cyclialkylations of Unsaturated Compounds yielding Heterocyclic Systems	807
3. Cyclialkylations through Arylaliphatic Alcohols	813
A. Cyclizations yielding Bicyclic Compounds (Tetralins and Indans) and Derivatives	816
B. Cyclizations yielding Hydrophenanthrenes and Derivatives. The Mechanism of the Cyclization	826
C. Related Cyclizations yielding Polycyclic Hydroaromatic Systems	840
D. Cyclizations of Di- and Triaryl Carbinols	843
a. Cyclizations of di- and triaryl carbinols yielding substituted fluorenes	843
b. Intramolecular condensation of arylamides of benzoic acid and derivatives	847
E. Cyclizations with Rearrangements. Phenanthrenes from Fluorenyl Carbinols	854
4. Cyclodehydration of Aryl-substituted Carbonyl Compounds	859
A. Cyclodehydrations producing Indenes and Polycyclic Hydroaromatics	859
a. Indenes and related systems by the cyclodehydrations of β -aryl ketones	859
b. Cyclodehydration of γ -aryl ketones yielding polycyclic hydroaromatic compounds	866
c. Cyclodehydration of δ -aryl carbonyl compounds	872
d. Cyclodehydration of aryl-substituted amides. The Bischler-Napieralski and related reactions	873

B. Aromatic Cyclodehydration	888
a. Cyclodehydrations yielding polycyclic aromatic hydrocarbons: naphthalene, phenanthrene, anthracene, and derivatives	888
b. Cyclodehydrations yielding heterocyclic systems	901
III. Cyclialkylation by Di- and Polyfunctional Alkylating Agents	927
1. Cyclialkylations with Dihalides	927
2. Cyclialkylations with Diols and Derivatives and with Tetrahydrofurans	933
3. Cyclization involving Acylation-Alkylolation	939
IV. Cyclialkylation of Aromatic Hydrocarbons with Olefins	944
1. Cyclialkylation of Styrene Compounds with Olefins to yield Indans	944
2. Cyclialkylations of Aromatic Hydrocarbons involving Hydride-ion Transfer Processes	952
 XXIII. Dehydrogenation Condensation of Aromatics (Scholl and Related Reactions) by <i>A. T. Balaban and C. D. Nenitzescu</i>	979
I. Introduction	979
II. Inter- and Intramolecular Scholl Reaction	979
1. Definition of the Scholl Reaction	979
2. Historical	980
3. Scope and Limitations	982
4. Reaction Mechanism	983
A. The First Stage, Protolytic Reaction	987
B. The Second Stage, Electrophilic Substitution	989
C. The Third Stage, Dehydrogenation	993
5. Thermodynamic Aspects	997
6. Technique of the Reaction	998
7. Allied Reactions	1000
A. General Considerations	1000
Table I. General scheme of Friedel-Crafts reactions	1001
B. Cyclialkylations	1001
C. Alkaline Fusion	1002
D. Oxidation	1003
8. Classification and Review of Scholl Reactions	1004
Table II. Intermolecular: Hydrocarbons	1006
Table III. Intermolecular: Miscellaneous	1008
Table IV. Intramolecular: Fluorene	1010
Table V. Intramolecular: Carbazole	1011
Table VI. Intramolecular: {1,5}	1012
Table VII. Intramolecular: {1,2,5}	1014
Table VIII. Intramolecular: {1,3,5}	1020
Table IX. Intramolecular: {1,2,4,5}	1020
Table X. Intramolecular: {1,2,3,5}	1022

Table XI. Intramolecular: {1,2,3,4,5}.	1023
Table XII. Rearrangements in the Scholl reaction	1024
III. Related Reactions	1025
1. Reactions yielding Anthracene	1025
2. Reaction of Aromatics with Quinones	1032
XXIV. Isomerization of Aromatic Hydrocarbons by D. A. McCaulay	1049
I. Introduction	1049
II. Measurement of Relative Stability	1049
1. Vapor-pressure Measurements	1049
2. Competitive Extraction	1050
III. Nature of Arene Complexes	1052
1. Complex Formation	1053
2. Structure of the Cation	1055
3. Effect of Structure of the Alkyl Group on Basicity	1058
IV. Reactions of Arenes	1061
1. Alkyl Migration	1061
A. Isomerization	1062
B. Disproportionation	1066
2. Halogen Migration	1069
V. Conclusion	1071
XXV. Alkylation of Saturated Hydrocarbons by Louis Schmerling	1075
I. Introduction	1075
II. Thermal Alkylation	1076
III. Mechanism of Catalytic Alkylation of Isoparaffins	1079
1. The Primary Reaction	1080
2. Side Reactions	1083
A. Hydrogen Transfer	1083
B. Destructive Alkylation	1084
C. Polymerization	1087
D. Formation of Catalyst Complex	1088
E. Formation of Esters	1088
IV. Catalytic Alkylation of Isobutane with Olefins	1089
1. Aluminum Chloride	1089
A. Ethylene	1090
B. Propene	1091
C. <i>n</i> -Butylenes	1091
2. Aluminum Chloride Sludges	1093
3. Aluminum Chloride Complexes	1095

4.	Nitroalkane Solutions of Aluminum Chloride	1097
5.	Aluminum Chloride Double Salts	1098
6.	Aluminum Bromide	1098
7.	Boron Fluoride	1099
8.	Zirconium Chloride	1100
9.	Hydrogen Fluoride	1100
	A. Propene	1101
	B. <i>n</i> -Butylenes	1102
	C. Isobutylene	1104
	D. Higher Olefins	1104
10.	Sulfuric Acid	1104
	A. Propene	1105
	B. <i>n</i> -Butylenes	1105
	C. Isobutylene	1106
	D. Higher Olefins	1106
	E. Cyclohexene	1108
V.	Catalytic Alkylation of Isopentane with Olefins	1109
	1. Boron Fluoride	1109
	2. Hydrogen Fluoride	1109
	3. Sulfuric Acid	1110
VI.	Catalytic Alkylation of Hexanes with Olefins	1110
VII.	Reaction of Isoalkanes with Alkyl Halides	1111
	1. With Alkyl Chlorides	1111
	A. Aluminum Chloride	1111
	B. Nitromethane Solutions of Aluminum Chloride	1112
	C. Sulfuric Acid	1112
	D. Dichloroaluminum Acid Sulfate	1113
	2. With Alkyl Bromides	1114
	3. With Alkyl Fluorides	1114
	A. Boron Fluoride	1114
	B. Hydrogen Fluoride	1118
VIII.	Reaction of Isoalkanes with Alcohols	1119
	1. Hydrogen Fluoride	1119
	2. Sulfuric Acid	1120
IX.	Condensation of Isobutane with Chloroolefins	1121
X.	Catalytic Alkylation of Cycloparaffins	1123
	1. Aluminum Chloride	1123
	A. Methylcyclohexane	1123
	B. Cyclohexane	1124
	C. Methylcyclopentane with <i>t</i> -Butyl Chloride	1125
	2. Aluminum Bromide	1125
	3. Hydrogen Fluoride	1127
	4. Sulfuric Acid	1128
	A. Methylcyclopentane	1128
	B. Alkylcyclohexanes	1129

XXVI. Condensation of Haloalkanes with Alkenes and Haloalkenes by Louis Schmerling	1133
I. Condensation of Alkyl Halides with Unsaturated Hydrocarbons	1133
1. Ethylene	1133
A. Tertiary Alkyl Halides	1134
B. Secondary Alkyl Halides	1136
C. Primary Alkyl Halides	1137
2. Propene	1138
3. Butenes	1139
4. Cyclohexene	1140
5. Alkadienes	1141
6. Acetylenes	1144
7. Vinylacetylenes	1145
II. Condensation of Cycloalkyl Halides with Ethylene	1148
III. Condensation of Alkyl Halides with Haloolefins	1150
1. Vinyl Chloride	1151
2. 2-Chloropropene	1153
3. Allyl Halides	1154
4. Vinylidene Chloride	1154
5. 1,2-Dichloroethylene	1155
6. Chlorotrifluoroethylene	1157
7. Dichloropropenes	1157
8. Trichloroethylene	1158
IV. Condensation of Cycloalkyl Halides with Haloethylenes	1158
1. Vinyl Halides	1158
2. Vinylidene Chloride	1159
V. Condensation of Dihaloalkanes with Ethylene	1159
VI. Condensation of Dichloroalkanes with Chloroethylenes	1161
VII. Condensation of Polychloroalkanes with Chloroolefins	1162
1. Dichloroethylene	1164
A. Chloroform	1164
B. Carbon Tetrachloride	1166
C. Polychloroethanes	1168
D. Polychloropropanes	1169
2. Trichloroethylene	1169
A. Chloroform	1169
B. Carbon Tetrachloride	1170
C. Polychloroethanes	1171
3. Tetrachloroethylene	1171
4. Hexachlorocyclopentadiene	1172
5. 1,1,2,3,4,5,5-Heptachloro-1-pentene	1172
 XXVII. Alkylation of Alkenes with Carbonyl Compounds (Prins Reaction) by Carleton W. Roberts	 1175
I. Introduction	1175

II.	Reactions of Alkenes and Cycloalkenes with Carbonyl Compounds	1177
1.	With Formaldehyde	1177
2.	With Other Carbonyl Compounds	1180
III.	Reactions of Simple Hydroxy-substituted Alkenes	1180
1.	Non-allylic Olefins with Aldehydes and Ketones	1180
2.	Allylic Olefins with Aldehydes and Ketones	1182
IV.	Halogen-substituted Olefins with Aldehydes	1185
V.	Conjugated Olefins with Aldehydes and Ketones	1187
VI.	Aryl-substituted Olefins	1189
1.	Styrene and Ring-substituted Styrenes	1189
2.	Substituted Vinylaromatics	1191
A.	Halovinylbenzenes	1191
B.	Miscellaneous Substituted Vinylaromatics	1192
3.	α -Methylstyrenes	1194
VII.	Lewis Acid Catalyzed Reactions of Unsaturated Compounds with Carbonyl Compounds	1196
VIII.	Thermal Reactions of Carbonyl Compounds with Unsaturated Compounds	1198
IX.	Mechanisms of the Prins Reaction	1202
XXVIII.	Isomerization of Saturated Hydrocarbons by Herman Pines and Norman E. Hoffman	1211
I.	Introduction	1211
II.	Generalized Mechanism	1212
III.	Carbonium Ions	1213
1.	Formation of Carbonium Ions	1213
A.	Addition of Protons to Olefins	1213
B.	Dissociation of Halides	1213
C.	Oxidation of Saturated Hydrocarbons	1213
D.	Protonation of Alcohols	1214
E.	Other Methods	1214
2.	Reactions of Carbonium Ions	1214
A.	Hydride Shift	1214
B.	Alkyl Shift	1214
C.	Abstraction of a Hydride from a Hydrocarbon Molecule	1215
D.	Loss of a Proton	1216
E.	Addition of a Carbonium Ion to an Olefin or Aromatic	1216
F.	Reduction	1216
G.	Beta-Scission	1217
H.	Exchange between Carbonium-ion Hydrogens and Acid Hydrogen	1217

IV. Lewis Acids	1218
1. Catalyst Activity	1218
2. Rate Correlations	1219
3. Alkanes	1219
A. Propane	1219
B. Butanes	1220
a. Equilibrium	1220
b. Mechanism	1221
C. Pentanes	1222
a. Equilibrium	1222
b. Mechanism	1223
D. Hexanes	1226
a. Equilibrium	1226
b. Mechanism	1226
E. Heptanes	1228
a. Equilibrium	1228
b. Mechanism	1229
F. Higher Paraffins	1229
4. Cycloalkanes	1230
A. Equilibrium	1230
B. Mechanism	1230
a. Cyclopentanes	1230
b. Cyclohexanes	1233
c. Cyclopropanes	1234
d. Cyclobutanes	1234
e. Bicycloalkanes	1234
V. Sulfuric and Related Acids	1235
1. Catalyst Activity	1236
2. Mechanism	1236
A. Hydrogen–Deuterium Exchange	1238
B. Racemization and <i>cis-trans</i> Isomerization	1239
VI. Silica–Alumina	1240
1. Chain Initiation	1241
2. Rearrangement	1242
3. Propagation	1242
VII. Hydroisomerization Catalysts	1243
1. Nickel on Silica–Alumina	1243
A. Experimental Results	1243
B. Mechanism	1243
C. Isotopic Labeling	1245
2. Platinum on Alumina	1245
VIII. Conclusion	1248
XXIX. Hydrogen Exchange in Aromatic Compounds by V. Gold	1253
I. Introduction	1253
1. Historical Background	1253
2. The General Design of Exchange Experiments	1254
3. Conditions for the Occurrence of Electrophilic Hydrogen Exchange in Aromatic Compounds	1259

II.	The Electrophilic Character of the Reaction	1262
1.	The Position of Attack in the Aromatic Compound, and Exchange Reactivity	1262
A.	Substituents in the Benzene Nucleus	1262
B.	Condensed Polycyclic Aromatic Hydrocarbons	1265
C.	Other Systems	1268
2.	The Interpretation of Quantitative Comparisons of Exchange Reactivity	1268
3.	The Medium and Catalyst System	1269
III.	Reaction Mechanism	1270
1.	The Composition of the Transition State	1270
2.	The Potential-energy Profile	1275
3.	Isotope Effects	1279
IV.	The Application of Hydrogen Exchange to the Study of Complex Catalyst Systems	1284
XXX.	<i>Polymerization by D. C. Pepper</i>	1293
I.	Scope	1293
II.	Introduction	1293
III.	Initiating Agents and Systems	1294
1.	Protonic Acids	1295
2.	Friedel-Crafts Halides	1296
3.	Carbonium Salts	1298
4.	Cationogenic Substances	1299
5.	High-energy Radiations	1300
IV.	Monomers	1300
1.	Alkenes	1301
2.	Vinyl Ethers	1302
3.	Styrene and Derivatives	1303
4.	Heterocyclic Monomers	1305
5.	Miscellaneous	1305
V.	Solvents	1306
VI.	Experimental Conditions	1307
VII.	Polymer Structure	1308
1.	Head to Tail Addition: Chain Branching	1308
2.	Stereoregularity	1309
VIII.	Mechanisms	1310
1.	Carbonium-ion Mechanism (Proton-initiated)	1310
2.	The Polarized Bond Mechanism	1311
3.	Water Co-catalyzed (Proton-initiated) Mechanism	1312
4.	Carbonium-ion Initiated (Halide Co-catalyzed) Mechanism	1312
5.	Propagation Reactions	1315

6.	Transfer and Termination Reactions	. . .	1317
A.	Spontaneous Transfer	. . .	1318
B.	Transfer to Monomer	. . .	1318
C.	Transfer to Solvent	. . .	1319
D.	Termination Processes	. . .	1320
7.	Ions or Ion Pairs	. . .	1321
IX.	Kinetics	. . .	1324
1.	General Considerations	. . .	1324
2.	Non-stationary Kinetic Schemes	. . .	1328
3.	Equilibrium Ionic Polymerization	. . .	1330
X.	Energetics	. . .	1331
XI.	Solvent Effects	. . .	1333
XII.	Copolymerization	. . .	1335
1.	Graft Copolymers.	. . .	1335
A.	By Transfer Reactions	. . .	1335
B.	By Co-catalysis using Halogenated Polymers	. . .	1335
2.	Reactivity Ratios	. . .	1336
Index		. . .	1349
