Preface	<i>page</i>	7
1 INTRODUCTION		13
Decision Classification		15
Description; explanation; prediction, evaluation; prescription		
2 DESCRIPTIVE DECISION		18
Selectivity of Observation		18
Sensation, Interpretation and Perception		19
Classification		22
Logical division; classification as an aid to discovery; basis for classification; classification rules; nomenclature and terminology		
Set Theory		27
Definition of Terms or Sets		30
Analytic definitions; vague terms; synonymous, contextual, denotative and ostensive definitions; definition by synthesis; operational definitions		
Language, Signs and Symbols		37
Emotive language		
Meaning of Statements and Expressions		40
Meaningfulness of Statements and Expressions		43
Logical positivism; pragmatism		
3 EXPLANATORY DECISION:		
THE DEDUCTIVE PATTERN OF EXPLANATION		48
Role of Explanation in Problem-Solving		48
Assumptions and Hypotheses		49
Testing hypotheses; rival hypotheses		
Deductive and Inductive Argument		58
4 LAWS IN EXPLANATION		62
Causal Relationships		62
Necessary, sufficient and contingent conditions		
Cause in Management and the Physical and Social Sciences		64

CONTENTS

	Cause in Science	65
	Cause and Causal Chains in Psychology	68
	Cause as Actionable Conditions in Management	69
	Having the right concepts as to possible cause; selecting the most plausible cause for action; verifying the cause	
	Laboratory-type Experimentation	81
	Mill's canons	
5	BEHAVIOURAL RESEARCH	87
	Experimentation with People	87
	Problem of External Validity	92
	Field Experiments, Field Studies and Natural Experiments	94
	Interrogation; interviews and postal surveys; motivation research; panels; difficulties in surveys; content analysis	
	Hypothetical Constructs and Psychological Relationships	102
6	STATISTICAL GENERALIZATION AND MEASUREMENT	109
	Statistical Generalization	109
	Probability	110
	Measurement	112
	Nominal, ordinal, interval and ratio scales	
7	TELEOLOGICAL AND GENETIC EXPLANATIONS	118
	Teleological Explanations	118
	Motives; functionalism	
	Genetic Explanations	125
8	MODELS AND THEORIES	129
	Models and Isomorphism	129
	Types and Purposes of Models	133
	Models in management; theories in science; theories in social science	
	Normative Theory	139
	Coductionism	140
9	PREDICTIVE DECISION	142
	Explanation and Prediction	142
	Joint probability; conditional probability, alternative probability	
	Bayesian Inference	145
	Technological Forecasting	149
	Scenario writing technique; trend projections; delphi technique; growth analysis; correlated events; systems	

	analysis; morphological analysis; relevance trees; demand assessments	
10	EVALUATIVE DECISION	154
	Measurement of Objectives	155
	Need for Intermediate Goals	156
	Determining the Relevant Attributes to be Evaluated	158
	Determining Operational Definitions of Attributes	158
	Determining Operational Measures of Relevant Attributes	159
	Relating Operational Measures to Objectives	163
11	PRESCRIPTIVE DECISION	165
	The Rationalistic Model	165
	Laying Out Objectives	166
	Identifying Alternatives	168
	Identifying Consequences	169
	Evaluating Consequences and Formulating Decision Rules	171
	The payoff matrix	
	Decision Trees	178
	Criticism of the Rationalistic Model	180
12	AN OVERALL VIEW	183
	Index	199
