

Chemical Applications of Ultrafast Spectroscopy

GRAHAM R. FLEMING

The University of Chicago

OXFORD UNIVERSITY PRESS *New York*

CLARENDON PRESS *Oxford*

1986

Contents

Chapter 1

Introduction	1
1.1 Time Scales	1
1.2 The Development of Ultrashort Light Pulses	3
1.3 Outline of the Book	4
References	4
General References on Ultrafast Spectroscopy	4

Chapter 2

Methods of Generating Ultrashort Light Pulses	5
2.1 Mode Locking	5
2.1.1 Methods of Mode Locking	10
2.2 Specific Laser Systems	11
2.2.1 Nd-Glass Lasers	12
2.2.1.1 Nd-YAG Lasers	14
2.2.2 Dye Lasers	16
2.2.2.1 Synchronously Pumped Dye Lasers	16
2.2.2.2 Continuous Wave Passively Mode-Locked Dye Lasers	22
2.2.2.3 Hybrid Passively-Actively Mode-Locked Continuous Wave Dye Lasers	26
2.2.2.4 Amplification of Continuous Wave Mode-Locked Dye Lasers	27
2.3 Compression of Ultrashort Light Pulses	29
2.4 Frequency-Shifting Techniques	31
References	36

Chapter 3

Methods of Characterizing Ultrashort Pulses	40
3.1 Introduction	40
3.2 Autocorrelation Techniques	40
3.2.1 Correlation Functions	42
3.2.2 Interpretation of Autocorrelation Measurements: Obtaining the Pulse Duration	45
3.2.3 Experimental Methods	46
3.2.3.1 Second Harmonic Generation	46

3.2.3.2 Other Nonlinear Methods	51	
3.3 Streak Cameras	51	
3.4 Experimental Studies of Synchronously Pumped Dye Lasers		55
References	64	

Chapter 4 Techniques of Ultrafast Spectroscopy 66

4.1 Introduction	66	
4.2 Pump-Probe Techniques	66	
4.2.1 Single-Wavelength Methods	66	
4.2.1.1 Pump-Probe Experiments with Polarized Light		70
4.2.1.2 The Coherent-Coupling Artifact and Transient-Grating Techniques	74	
4.2.2 Broad Spectral Coverage for the Probe Beam		80
4.2.3 Light-Gating Techniques	82	
4.2.4 Multiphoton Ionization	86	
4.2.5 Photoacoustic Spectroscopy	86	
4.2.6 Other Pump-Probe Techniques	87	
4.3 Direct Time-Resolution Methods	89	
4.3.1 Streak Camera Measurements of Fluorescence		89
4.3.2 Time-Correlated Single Photon Counting		91
4.3.3 Phase-Shift Methods	95	
References	96	

Chapter 5 Relaxation Processes in the Vapor Phase 100

5.1 Introduction	100	
5.2 Radiationless Decay Processes	100	
5.2.1 Intermediate Case Radiationless Decay	100	
5.2.2 The Channel 3 Radiationless Process in Benzene		107
5.3 Intramolecular Vibrational Relaxation	111	
5.4 Molecular Complexes	115	
References	120	

Chapter 6 Relaxation Processes in Liquids and Solutions 124

6.1 Introduction	124	
6.2 Rotational Relaxation	124	
6.2.1 Formal Description of Time-Resolved Spectroscopy. Experiments Using Polarized Light	125	
6.2.1.1 Spherical Rotor	128	

6.2.1.2	Symmetric Rotor	128	
6.2.1.3	Asymmetric Rotor	129	
6.2.1.4	Stick Hydrodynamics	129	
6.2.1.5	Slip Hydrodynamics	136	
6.2.1.6	Level Kinetics	131	
6.2.2	Experimental Results	134	
6.3	Optical Kerr-Effect Studies	145	
6.4	Vibrational Relaxation	148	
6.4.1	Vibrational Energy Transfer and Population Decay	154	
6.4.2	Vibrational Dephasing Times	159	
6.5	The Stokes Shift	166	
6.5.1	Dynamics of Electron Solvation	169	
6.6	Intramolecular Radiationless Decay	172	
6.6.1	Photoisomerization and Other Processes Involving Large-Amplitude Motion	179	
6.6.2	Photodissociation and Recombination	195	
6.6.3	Intramolecular Proton Transfer	200	
6.6.4	Excited-State Charge-Transfer Complexes	205	
6.6.5	Organic Reaction Mechanisms	216	
6.6.6	Energy Transfer	218	
	References	224	
Chapter 7			
Relaxation Processes in Solids 236			
7.1	Introduction	236	
7.2	Vibrational Relaxation Processes in Organic Molecular Crystals	236	
7.3	Exciton Transport in Organic Crystals	249	
	References	251
