The Racah-Wigner Algebra in Quantum Theory by L. C. Biedenharn and J. D. Louck (ENCYCLOPEDIA OF MATHEMATICS AND ITS APPLICATIONS, Volume 9)	xvii
Editor's Statement	xxiii
Section Editor's Foreword	xxv
Preface	xxix
Acknowledgments	xxxii

PART I

Chapter 1 Introduction	1
Notes	4
References	5
Chapter 2 The Kinematics of Rotations	7
1. Introduction	7
2. Properties of Rotations	7
3. Dirac's Construction	10
4. Cartan's Definition of a Spinor	15
5. Relation between $SU(2)$ and $SO(3)$ Rotations	17
6. Parametrizations of the Group of Rotations	19
7. Notes	25
References	26
Chapter 3 Standard Treatment of Angular Momentum in Quantum Mechanics	29
1. Overview	29
2. Definition of the Angular Momentum Operators	29
3. The Angular Momentum Multiplets	31
4. Matrices of the Angular Momentum	37
5. The Rotation Matrices (General Properties)	39
6. The Rotation Matrices (Explicit Forms)	46

7.	Wave Functions for Angular Momentum Systems	55
8.	Differential Equations for the Rotation Matrices	57
9.	Orthogonality of the Rotation Matrices	66
10.	Spherical Harmonics	68
11.	The Addition of Angular Momentum	71
12.	The Wigner Coefficients	75
13.	Relations between Rotation Matrices and Wigner Coefficients.	84
14.	Concept of a Tensor Operator	87
15.	The Wigner-Eckart Theorem	94
16.	The Coupling of Tensor Operators	97
17.	Applications of the Wigner-Eckart Theorem	99
18.	Racah Coefficients	106
19.	9- j Coefficients	127
20.	Rotationally Invariant Products	131
21.	Operators Associated with Wigner, Racah, and 9- j Coefficients	133
22.	Notes	141
23.	Appendices	162
	References	175
Chapter 4	The Theory of Turns Adapted from Hamilton	180
1.	An Alternative Approach to Rotations	180
2.	Properties of Turns (Geometric Viewpoint)	184
3.	Properties of Turns (Algebraic View)	193
4.	The Space of Turns as a Carrier Space	198
5.	Notes	201
	References	203
Chapter 5	The Boson Calculus Applied to the Theory of Turns	205
1.	Introduction	205
2.	Excursus on the Boson Calculus	206
3.	The Jordan Mapping	212
4.	An Application of the Jordan Map	214
5.	Generalization of the Jordan Map	217
6.	Application of the Generalized Jordan Map	219
7.	Application of the Generalized Jordan Map to Determine the Wigner Coefficients	223
8.	Wigner Coefficients as “Discretized” Rotation Matrices	226
9.	Appendices	230
	References	264

Chapter 6 Orbital Angular Momentum and Angular Functions on the Sphere269

1. Rotational Symmetry of a Simple Physical System270
2. Scalar Product of State Vectors271
3. Unitarity of the Orbital Rotation Operator272
4. A (Dense) Subspace of $\mathcal{H}(S)$ 273
5. Only Integral Values of l can occur in the Quantization of Spatial (Orbital) Angular Momentum274
6. Transformations of the Solid Harmonics under Orbital Rotation275
7. The Elements of the Rotation Matrix $\mathcal{D}^l(R)$ are Homogeneous Polynomials277
8. The Energy Eigenvalue Equation278
9. Tensor Spherical Harmonics279
10. Spinor Spherical Harmonics283
11. Vector Spherical Harmonics284
12. Algebraic Aspects of Vector Spherical Harmonics286
13. Summary of Properties of Vector Solid Harmonics292
14. Decomposition Theorem for Vector Functions Defined on the Sphere299
15. Rotationally Invariant Spherical Functions of Two Vectors302
16. Applications of the Cartan Map to Spherical Functions . . .305
17. Rotationally Invariant Spherical Functions in Several Vectors307
18. Relationship of Solid Harmonics to Potential Theory311
19. The Orbital Rotation Matrices as Forms313
20. The Orbital Rotation Matrices are Equivalent to Real Orthogonal Matrices316
21. The “Double-Valued Representations” of the Proper Orthogonal Group $SO(3)$ 316
22. Note319
- References322

PART II

Chapter 7 Some Applications to Physical Problems324

1. Introductory Remarks324
2. Basic Principles Underlying the Applications324
3. The Zeeman Effect326

a.	Background	326
b.	The Normal Zeeman Effect	327
c.	Quantal Treatment	327
d.	The Anomalous Zeeman Effect	331
e.	Relation to the Development of Angular Momentum Theory	333
f.	Concluding Remarks	334
g.	Note	335
	References	335
4.	The Nonrelativistic Hydrogen Atom	335
a.	Algebraic Aspects	336
b.	Properties of the Bound States of the Hydrogen Atom	340
c.	Explicit Hydrogen Atom Wave Functions	344
d.	Momentum Space Representation	347
e.	Relationship between Rotation Matrices and Hyperspherical Harmonics	351
f.	Pauli Particle (Hydrogen Atom with Spin)	353
g.	Remarks	359
h.	Appendix	361
	References	362
5.	Atomic Spectroscopy	364
a.	Introduction	364
b.	The Approximate Hamiltonian for Many-Electron Atoms	365
c.	The Central-Field Model	366
d.	A Short Vocabulary of Spectroscopy Terminology	376
e.	Closed Shells	377
f.	The One-Electron Problem with Spin-Orbit Coupling	378
g.	Two-Electron Configurations	381
h.	Equivalent Electron Configurations	393
i.	Operator Structures in l^n -Configurations	406
j.	Appendix	421
	References	428
6.	Electromagnetic Processes	432
a.	Preliminary Remarks	432
b.	Multipole Radiation	433
c.	The Hansen Multipole Fields	435
d.	Classical Multipole Moments	437
e.	Reduction of the Electric Multipole Moments	438
f.	The Radiated Multipole Fields	439
g.	A Curious Property of the Multipole Expansion (Casimir [9])	439

h.	The Radiated Power	440
i.	Angular Momentum Flux	441
j.	A Vectorial Analog to the Rayleigh Expansion	442
k.	An Illustrative Example	443
l.	The Density Matrix for Photon Angular Correlation Measurements	449
m.	Notes	452
	References	453
7.	Angular Momentum Techniques in the Density Matrix Formulation of Quantum Mechanics	455
a.	Preliminaries	455
b.	Statistical Tensors	457
c.	A Geometric Characterization of the Density Matrices for Pure States of Spin- j	463
d.	The Density Matrix for a Relativistic Massive Particle of Spin- j	467
e.	The Special Case of Massless Particles	469
f.	Coupling of Statistical Tensors	470
g.	Some Examples Illustrating the Coupling Formula	471
h.	The Majorana Formula	474
	References	476
8.	Angular Correlations and Angular Distributions of Reactions	478
a.	The Nature of the Angular Correlation Process	478
b.	Cascades	483
c.	Stretched Angular Momenta	484
d.	More Involved Correlation Processes	484
e.	Relativistic Regime	488
	References	491
9.	Some Applications to Nuclear Structure	492
a.	Qualitative Considerations	492
b.	The Nuclear Shell Model of Mayer and Jensen	493
c.	The Isospin Quantum Number	499
d.	Properties of a Short-Range Interaction	500
e.	The Pairing Interaction (Seniority)	508
f.	Quasi-Spin	510
g.	Quasi-Spin Wave Functions (Seniority Label)	512
h.	Application of Quasi-Spin to Tensor Operators	515
i.	Seniority in Terms of Casimir Operators	517
j.	Concluding Remarks	523
k.	Note	524
	References	525
10.	Body-Fixed Frames: Spectra of Spherical Top Molecules	527

a.	Introduction	527
b.	Definition and Kinematics of a Body-Fixed Frame	528
c.	Form of the State Vectors for Isolated Systems Described in a Body-Fixed Frame	533
d.	The Instantaneous Principal Axes of Inertia Frame	534
e.	The Eckart Molecular Frame	535
f.	Distinguished Particle Frames	539
g.	Uniform Method of Defining Body-Fixed Frames	540
h.	Internal Coordinates	543
i.	Internal Coordinates for the Eckart Frame	544
j.	Internal Coordinates for the Principal Axes Frame	549
k.	The Linear Momentum Operators	554
l.	The Hamiltonian for a Semirigid (Rigid) Polyatomic Molecule	559
m.	Approximate Form of the Hamiltonian for Spherical Top Molecules	563
n.	First-Order Energy Spectrum of a Triply Degenerate Vibration in a Spherical Top Molecule	572
o.	The Point Group of a Rigid Molecule	578
p.	Higher-Order Corrections: Phenomenological Hamiltonian.	587
q.	Splitting Patterns	594
r.	Symmetry Axes and Induced Representations	602
s.	High Angular Momentum Effects	609
t.	Selection Rules and Statistical Weights	612
u.	Spectra of Fundamental Transitions of SF_6	624
v.	Appendices	626
	References	629
	Appendix of Tables	634
	Bibliography	667
	List of Symbols	670
	Author Index	687
	Subject Index	695
