

WATER

A COMPREHENSIVE TREATISE

Edited by Felix Franks

*Department of Botany
University of Cambridge
Cambridge, England*

Volume 6
Recent Advances

PLENUM PRESS • NEW YORK AND LONDON

Contents

Contents of Earlier Volumes	xiii
---------------------------------------	------

Chapter 1

X-Ray and Neutron Scattering by Aqueous Solutions of Electrolytes

J. E. Enderby and G. W. Neilson

1. The Basic Structural Problem	1
1.1. Introduction	1
1.2. The Properties of $S_{\alpha\beta}(k)$	4
1.3. Termination Errors	7
2. X-Ray Studies	7
2.1. Introduction	7
2.2. A Survey of X-Ray Studies	9
2.3. Future Prospects	16
3. Neutron Studies	17
3.1. Introduction	17
3.2. First-Order Difference Scattering Functions	20
3.3. Placzek Corrections to the First-Order Difference $\Delta_M^0(k)$	21
3.4. Experimental Procedures	23
3.5. Second-Order Difference Scattering Functions	24
3.6. Experimental Procedures	25
4. Structural Information Derived from Neutron Studies	25
4.1. Introduction	25
4.2. Cationic Hydration	27
4.3. Anionic Hydration	33
4.4. Cation–Cation Distribution Functions	38
4.5. Anion–Anion Distribution Functions	42
5. Conclusions and Future Prospects	44

*Chapter 2***The Organization and Function of Water in Protein Crystals**

J. L. Finney

1. Introduction	47
2. Water–Water and Water–Protein Interactions	50
2.1. Possible Solvent Effects in Proteins	53
2.2. Conventional Wisdom of Protein Hydration	59
3. Crystal Structure Analysis of Proteins and Its Subsequent Refinement	61
3.1. Theory, Data Collection, and Initial Solution of the Structure	62
3.2. Refinement of Structure	65
3.3. Summary: Reliability of Atomic Coordinate Data	68
4. Solvent Information from Crystal Structure Analysis	69
4.1. Information from Protein Coordinates	69
4.2. Direct Location of Water Molecules	81
4.3. Water in the Outer Solvent Region	108
5. Summary: What We Think We Now Know	115
6. Current Work and Future Developments	118
6.1. Experimental Work	118
6.2. Theoretical Work	120

*Chapter 3****Ab Initio* Methods and the Study of Molecular Hydration**

W. Graham Richards

1. Introduction	123
2. Monomeric Water	124
3. The Water Dimer	124
4. Polymers of Water	127
5. Solvated Ion Pairs	129
6. Solvation of Molecules and Ions	129
6.1. The Supermolecule Approach	130
6.2. The Continuum Approach	134
6.3. The Statistical Approach Using Solvation Potentials	136
7. Conclusions	137

*Chapter 4***Mixed Aqueous Solvent Effects on Kinetics and Mechanisms of Organic Reactions**

J. B. F. N. Engberts

1. Introduction	139
2. Mixed Aqueous Solutions	144
2.1. Classification	144
2.2. Solvent Parameters	147
3. Solute–Solvent Interactions in Mixed Aqueous Solutions	159
3.1. Hydrogen Bonding	160
3.2. Hydrophobic Interactions	164
3.3. van der Waals Interactions	166
3.4. Electrostatic Interactions	167
3.5. Treatments of Solution Processes in Aqueous Media	168
4. Mixed Aqueous Solvent Effects and Transition-State Theory	171
4.1. Transition-State Theory	171
4.2. Activation Parameters	172
4.3. Solvent Effects on Initial State and Transition State	176
4.4. Isokinetic Relationships	179
5. Kinetic Solvent Effects on Organic Reactions in Mixed Aqueous Solvents	181
5.1. Introduction	181
5.2. Water-Catalyzed Reactions	181
5.3. Acid- and Base-Catalyzed Reactions	210
5.4. Nucleophilic Displacement Reactions	220
5.5. Miscellaneous Reactions	230

*Chapter 5***Solvent Structure and Hydrophobic Solutions**

D. Y. C. Chan, D. J. Mitchell, B. W. Ninham, and B. A. Pailthorpe

1. Introduction	239
2. Thermodynamics: Formalism and Notation	241
2.1. Definitions	241
2.2. Thermodynamics and Distribution Functions	242
2.3. Remarks on Structure	244

3. Solvent Structure and Solution Thermodynamics: Models	245
3.1. Characterization of Hydrophobic Solutions	246
3.2. Effects of Molecular Properties	247
3.3. Hard-Sphere Mixtures	248
3.4. One-Dimensional Solutions	250
4. Evidence from van der Waals Forces	256
4.1. Many-Body Forces	258
4.2. Temperature-Dependent Forces and Salt Effects	259
5. Effect of Solvent Structure on Long-Range Forces	261
5.1. Solute Interactions via Lifshitz Theory	261
5.2. Planar Interactions via Statistical Mechanics	263
6. Short-Range Solute–Solute Interaction	265
6.1. Hard-Sphere Solvent	266
6.2. Lennard-Jones Solvent	266
6.3. Sticky Hard Spheres	268
6.4. Finite-Size Solutes	270
7. Mean-Field Theory of Solvent Structure	271
8. Conclusion	276

Chapter 6

Computer Simulation of Water and Aqueous Solutions

D. W. Wood

1. Introduction	279
2. Some Aspects of Statistical Mechanics for Molecular Assemblies	280
3. The Molecular Dynamics Method	288
4. Models of the Water Molecule	306
4.1. The Ben-Naim–Stillinger (BNS) Model	307
4.2. The ST2 Potential	310
4.3. Hartree–Fock Potential	312
4.4. Point Charge Models for Monomers	325
4.5. Central-Force Models	327
5. Potentials for Aqueous Solutions	332
5.1. Solutions of Inert Atoms	332
5.2. Ionic Solutions	333
5.3. Organic Molecules and Water	341

6. Molecular Dynamics Studies of Pure Water	346
6.1. Equilibrium Structure	347
6.2. Kinetic Properties	365
7. Monte Carlo Simulations of Pure Water	372
8. Molecular Dynamics Results for Aqueous Solutions	378
9. Monte Carlo Results for Aqueous Solutions	386
Appendix	392
